A complete schedule of 1969 festivals and competitions.

**1968's
MOST HONORED
FILMS**

—an exclusive review

JANUARY • 1969 • FIFTY CENTS

Sponsored films are helping some very important companies.

These ads show you how.

This time machine is helping Union Carbide

prepare students for the future.

Union Carbide: The Diversions Company is working on the most important plan for the 21st Century. And they think you can help them with the planning for it.

So Union Carbide is helping you to see the world through the camera of the future.

The company has sponsored the first series of 100 video of its modern products. It has also sponsored the 21st Century film series, and will continue to do so. And with the help of their advertising agency, Young & Rubicam, they are offering these films to schools, together with illustrated teaching guides. They call it "Future".

This far-reaching public service program is a substantial investment. So Union Carbide wants to be sure they reach as many students as they can. That's why they called on Modern, the world's largest distributor of sponsored films.

So far September, thanks to Modern, at least a million of students throughout the country have seen what's to be in the future. And they're determined to be ready to go. A million future citizens. One hundred million students. A million communications projects. And it's living all in the same classroom. You film.

Through this exciting program, Union Carbide is doing more than acting among people in the marketplace and through the classroom. They are communicating with their customers and employees of the future.

MODERN TALKING PICTURE SERVICE, INC.
1212 Avenue of the Americas, New York, N.Y. 10036

Union Carbide is using films to reach the adults of tomorrow.

100 million people have seen the landing at Plymouth Rock.

Thanks to Aero Mayflower.

They're all on film.

A picture of Aero Mayflower. That's the company that produced the world famous 1956 dramatic movie, "The Mayflower". Aero Mayflower wasn't around to greet their namesake when the Mayflower reached America in 1620. But they were definitely on the scene in 1957 when a group of advertisers recognized the historic history of the ship. It was a perfect public relations opportunity to broaden Aero Mayflower's corporate identity. And they made the most of it.

Through motion pictures, the company produced "The Mayflower Story" a fascinating 14th sound and color film that documents the 34 day voyage of Mayflower II.

MODERN TALKING PICTURE SERVICE, INC.
1212 Avenue of the Americas, New York, N.Y. 10036

Aero Mayflower is using films to broaden its corporate identity.

Since 1960, United Air Lines has taken nearly 130 million people to Hawaii, California and Colorado

without leaving the ground.

They've done it via sponsored films.

United felt the best way to get people to fly was to show them the fun they can have. So using sponsored films, United has an audience in each city, scene of sailing in Hawaii, "Aloha" in California, "Sun in Colorado".

These visual images are also used for the corporate image and suggest that "in the trouble times" United is more than an advertising slogan. It's in the airline that has made so many flights that was that they're also using films to tell people more about United's own operation. Everything

from movies about flight training to the fascinating story of a stewardess.

United gets plenty of mileage out of their film program as people see them on television, in schools, in stores, airports, theaters, Distinction, Business, and community organizations of all kinds.

How is on the world's largest airline reach so many people? They work with general dealer Modern, the world's largest distributor of sponsored films.

By helping people discover America, United has helped more and more people discover United.

MODERN TALKING PICTURE SERVICE, INC.
1212 Avenue of the Americas, New York, N.Y. 10036

United Air Lines is using films to stimulate people to travel.

In 1953, the New York Stock Exchange

made a very smart investment.

They're still gathering the dividends.

Their 40,000,000 investment was in "The New York Stock Exchange". They made it a "New York" people understood and loved to see on the television screen.

The result has been public relations success. So successful in fact that the exchange has broadened its annual program with this and local films that explain the "New York" American benefits from the first stock exchange.

At all times, more than 100,000 groups have seen this, which is why they're "Business groups, schools, churches, community groups of all kinds".

How does the exchange reach such a tremendous number of people? They work with a special general dealer, Modern, the world's largest distributor of sponsored films. And on in hundreds of dividends.

MODERN TALKING PICTURE SERVICE, INC.
1212 Avenue of the Americas, New York, N.Y. 10036

The New York Stock Exchange is using films to explain stocks and investing.

We'll gladly send you reprints, so you can read the full stories. These are just four of the 700 companies who are reaching the right audiences through Modern, the world's largest distributor of sponsored films. We can do the same for you. Let us show you how sponsored films can add impact to your advertising and public relations program. Contact Modern.

MODERN TALKING PICTURE SERVICE, INC.

1212 Ave. of the Americas, N.Y., N.Y. 10036

Modern is the world's largest distributor of sponsored films to Community Groups, Schools, Television, and Theatres, serving sponsors through 34 U.S. and Canadian film libraries, and through Infurfilm overseas.

The new Technicolor 1000B cartridge-loading Super 8 movie projector can take it! In fact it's so tough, it's guaranteed to last up to four times longer than any other movie projector you can buy . . . because we're offering a 24-month warranty* instead of the 6-months' warranty common in the audio-visual industry. The Technicolor 1000B leads a double life. With its unique compact, lightweight design, and fine optics, the Technicolor 1000B is perfect for individual desk-top use, or large, auditorium size gatherings. You get further versatility with a choice of 12 or 30 minute film cartridges . . . both use professional optical sound, of course.

With film use soaring, movie projectors have to be easy to use and long lasting. Here are some other things we've done with the Technicolor 1000B to fill the bill:

The projector that automatically cleans film

Dust on film can "bug" you . . . hairy bug-like particles that lurk around the edges of the projected picture. Dust is hard on film too. It scratches and scores the surface. The new Technicolor 1000B has a built-in electrostatic film cleaning mechanism. Keeps films clean and bug-free; films last longer.

Lamp-Saver switch extends lamp life

The Technicolor 1000B has a "high-low" Lamp-Saver light switch. Flick it to low for desk-top or study carrel use . . . high for large groups.

Beefed-up components can take today's hard use

We went through every working part of the projector to see how service life could be extended. The result: beefed up parts like a 6" instead of a 4" flywheel, more rigid frame, square drive belts, life-time lubricated ball bearing motor, metal speaker grill, encapsulated speaker

jack, and fuse-type electrical circuit, all resulting in a stronger, tougher unit you can use more hours per day . . . every day.

We made more improvements

There's a new handle, the Technicolor 1000B is easier to carry. The push button controls operate more easily. We added a "fine tune" focus mechanism, and a "pop out" bulb holder that makes bulb changing a snap. The control panel is removable so that the exciter lamp can be easily changed and cleaned. The amplifier was improved to give better frequency response and higher volume. With all the fine features of the Technicolor 1000B, don't forget our famous Technicolor 1000A . . . it's still the lowest cost cartridge-loading Super 8 movie projector with professional optical sound. Technicolor 1000B, Technicolor 1000A, advanced movie projectors for today's film users.

Let us send you more information about the double life Technicolor 1000B. Fill out the coupon below and we'll rush you all the facts.

"give me a movie projector that can really take a beating . . . yet is light and compact . . . and don't forget, it's got to be versatile and easy to use too."

Victor Duncan chose the ARRIFLEX 16BL to avoid 'bugs' in filming for Volkswagen.

In ordering their 1969 Announcement Film to be produced by the Kerbawy Company, Detroit, Volkswagen had provided Director of Photography, Victor Duncan, with requirements that were almost contradictory.

Intended for large audiences in seven cities, the 45 minute lip-sync photoplay was to be projected on 22 foot screens. Ordinarily a job for 35mm...but the shooting schedule was tight, and involved travel to numerous Volkswagen dealers from California to Connecticut. "Choice of equipment was of special concern," writes Mr. Duncan, "not only because of the needle-sharp requirements of large screen projection, but also due to the fast moving, travel-light nature of the job." 16mm fulfilled the latter requirements—and Arriflex was used to ensure the all-important technical quality.

Choosing an Arriflex 16BL as his 'universal' camera for all sound work, and a 16S for wild shots and cutaways, Mr. Duncan headed for the many location challenges that awaited him. As he describes it, "it was an on-and-off the airplane routine, with short schedules at every stop. It was exciting as a technical and logistical problem. How many magazines, for example, do you carry? The BL's magazines being compact as they are, we were able to pre-load more than enough without overloading ourselves, but this is the kind of thing you've got to consider.

There were acoustical problems too—after spending six easy-going days with the 16BL on the sound stage, we found out just how miserable an automobile showroom—with its wide open, echoing spaces—can be for sound recording. And without many objects to hide lights behind, we often had to rely on available light, or relatively low levels of artificial light. Without much depth-of-field, we constantly had to ride the focus, and often from a camera position too cramped for an assistant. If it hadn't been for the brilliance of the Arri's viewfinder, and focusing grips I could really get my hands on, I'm not sure what we'd have gotten on those 22 foot screens."

When not mastering filming problems like these, Mr. Duncan runs a lively equipment rental business. An enviable position for a cameraman—it not only keeps the most extensive resources at hand it also gives him an 'inside' knowledge of their performance.

Not only Mr. Duncan, but filmmakers all over the world who really know equipment, choose Arriflex.

Berkey Video Becomes Berkey Pathe in Change

Berkey Photo, Inc., has announced a major expansion program, involving substantial capital equipment investment, improved quality control systems, and executive appointments, for its newly-named Berkey Pathe division.

Berkey Photo, which acquired the Pathe Laboratories in New York and Hollywood as well as Color Service, New York, from Perfect Film and Chemical Corp. in September, 1968, will use the Pathe name for its entire motion picture operations, according to Benjamin Berkey, the company's president.

Manuel A. Casiano, Jr., has been named president of the new division. He was president of Berkey Video Services, Inc. which is now consolidated into the new operation.

Operating subdivisions of Ber-

key Pathe are now the following:

Hollywood

Berkey Pathe — Hollywood Laboratory, theatrical film processor.

New York City

Berkey Pathe — 54th Street Laboratory, theatrical and industrial film processor.

Berkey Pathe — 106th Street Laboratory, theatrical film processor.

Berkey Pathe — 45th Street Laboratory, motion picture film processor specializing in television films.

Berkey Pathe Opticals, producer of titles and optical effects for the motion picture industry.

Berkey Pathe is headquartered at 322 East 45th Street.

Casiano said the name change was made to better reflect the division's total international motion picture and television film capabilities. The new Berkey division

now offers complete processing and optical effects to all areas of the motion picture industry — feature length films, television films and industrial films.

F&B Ceco Industries Acquires Studio City

F&B/Ceco Industries, Inc., has acquired the well-known Studio City stages located in North Miami, Florida.

These new, modern studios (completed in 1965 and valued at well over a million dollars) are rated by many as technically perfect, with facilities and equipment to accommodate any type and size of production from a musical spectacular to the smallest TV commercial. Completely sound proofed and air conditioned by its own generator plant, two stages are presently available for rental, each one measuring 80' wide by 125' long by 50'

height. One stage contains a built-in water pit for swimming pool and underwater scenes, while the other stage has a 30' x 30' recessed area, permitting convenient ground level filming of overhead sets. Each stage has over 3000 AMPS of electrical power, fully equipped dressing and wardrobe rooms, carpenter shops, street level loading ramps and set storage, in addition to many luxurious executive suites, eating and screening rooms and plenty of free parking. Numerous adjoining facilities house companies offering services to film producers, including a new film developing and printing lab operated by Capitol Film Laboratories providing overnight rushes. Complete professional motion picture rental equipment is readily available from F&B/Ceco's nearby Hialeah branch.

The Studio City name will be changed to F&B/Ceco Studios, *Continued on page 8*

and will be rented to film producers under the management of Norman Zuckerman, vice president, who has over 15 years experience with F&B/Ceco and has been operating their Hialeah branch for the past 5 years. Len Hollander, vice president in New York and Carl Porcello, vice president of F&B/Ceco's Hollywood, California office will coordinate studio rental arrangements for producers in their respective areas.

Arthur Florman, president of F&B/Ceco Industries, stated that "We have already made arrangements with Barry Mahon Productions to be a resident producer of F&B/Ceco Studios in Miami. He has rented a suite of offices and will start shooting a feature film on the stages in early December. We are presently negotiating with a major theatrical film company to shoot five features during 1969, and several other producers are expected to rent permanent offices in the buildings. We also plan to move F&B/Ceco's Hialeah branch to the studio area, occupying a 20,000 sq. foot building to house their expanded operations. Further studios will be constructed in Florida as necessity dictates."

Pelican Films Adds New Canadian Affiliate

Pelican Films, Inc., New York, has announced the formation of a new Canadian affiliate, Pelican-Templeton Productions, Ltd. The firm began filming operations in March, 1968, and is located at 70 Overlea Boulevard, Toronto.

Pelican has combined its film services with Templeton Studios, one of the largest art and photography companies in Canada. With extensive modern facilities, the new company offers complete service to Canadian clients.

Reeves Acquires, Adds Videotape Productions

Reeves Broadcasting Corporation has announced that it has agreed in principle to acquire all of the outstanding stock of Videotape Productions of New York, Inc. from MGM Telestudios, Inc. and the 3M Company. The transaction is subject to the execution of a final agreement.

The operations of Videotape Productions of New York, Inc. at Videotape Center, will be integrated into Reeves Video Division, according to Hazard E. Reeves, chairman, and is part of that division's continuing program of expansion.

Reeves commented "with the acquisition of Videotape Center Reeves Video now extends its services from post-production and location shooting to the studio floor. Reeves will make available at Videotape Center facilities consisting of shooting stages, electronic editing rooms, camera and recording equipment."

Calvin Productions Adds Building During Expansion

Calvin Productions, Inc., has begun a facilities expansion that will see the firm move in to the entire office building at 223 1/2 Grand Avenue, Kansas City, Missouri.

The company plans to transfer the bulk of the production staff to the new location. This includes writers, directors, editors, artists, administrative personnel and the operations and scheduling staff. Also making the move will be Calvin Cinequip, Inc., a subsidiary engaged in the sale and leasing of photographic equipment.

The move will also reportedly enable Calvin to expand laboratory facilities into space vacated at the present Kansas City location, thereby achieving greater customer service efficiency.

Teletronics Explains New Electronic Editing Use

A new electronic editing technique, in use at Teletronics International, Inc., New York, was revealed for the first time by George K. Gould, president of the company, speaking before the Broadcast Advertising Producers Society of America at the Advertising Club of New York.

In describing his system Gould said, "Electronic editing is not only more accurate than film editing, it is cleaner, faster, neater and more economical as well. Until recently tape editors were unable to still-frame, but now we actually can freeze at 1/30 of a second, a control we've been

continued

inching up to for years.”

Teletronics editing technique utilizes an Ampex 7500 one-inch tape recorder, manufactured for industrial use. At Teletronics, however, it has been adapted for sophisticated editing purposes and an entire editing room has been built around it.

Just a few hours earlier, Gould confided, the room and the machine had been used for the first time to edit a complex one hour dramatic show — and he displayed photographic blow-ups of the editing session shot just that afternoon.

The system is relatively simple: original footage recorded from the camera onto broadcast quality two-inch tape is transferred from the master tape room on the first floor of Teletronics' four-story building to the one-inch tape facilities on the second floor. A digital code is electronically recorded on both tapes every 1/30 of a second. The master tape is then stored until after the editing is completed.

A Teletronics editor usually can electronically edit a minute spot and have a completed rough cut to screen for client approval in two to three hours. When the electronic work print is approved, the editing flow sheet information is fed into a computer which automatically conforms the two-inch master tape. Optical and titles are added electronically.

Kodak Grants \$4.3 Million In 1968 Educational Aid

Eastman Kodak Company will contribute \$4.3 million under its 1968 educational aid program.

Since the start of the sixties, the value of Kodak's contributions to higher education has totaled about \$23.5 million.

Included in the 1968 amount part of which is provided from current earnings and the balance from funds previously set aside for educational purposes, are these categories:

Some \$364,200 in unrestricted direct grants goes to 78 privately supported schools.

The sum of \$281,000 in research grants is awarded to selected college and university graduate departments of chemistry, physics, chemical engineering, and business management. Included for the second time are five grants to support graduate training and research in the field of teacher education.

A total of \$790,000 is allocated in part for capital-improvement programs at eight institutions and in part for special grants, mostly of \$5,000 each, to 14 colleges that emphasize the liberal arts and other programs.

More than \$2.8 million in other contributions is earmarked for educational institutions in areas where the company has major manufacturing plants and for organizations concerned with education.

Noted actor and public service minded citizen, Charlton Heston, discusses charitable fund-raising film for AID-United Givers with Richard Soltys (left), head of Richard J. Soltys Productions, Burbank, California and George F. Elmendorf (right), president of AID. Heston is narrating the film now being produced by Soltys for AID, which raises funds for major health and welfare causes in Southern California. It is expected that the new filmstrip will play a significant part in furthering the AID program, in that it will be shown to most of the Southern California labor force, approximately 4,000,000 people.

**Frederic W. Overesch
 Named to Head Wilding**

Frederic W. (Fritz) Overesch, Detroit marketing-communications executive, has been elected board chairman and president of Wilding, Inc., a Bell & Howell subsidiary.

The appointment took immediate effect when Overesch's predecessor as president, Daniel Gallagher, was appointed a vice president of Bell & Howell's new business group and assigned to the parent company's headquarters office in Chicago.

Wilding's headquarters office has been separated from the production installation in Chicago and relocated at 18000 West Eight-Mile road, Southfield, Mich., the principal one of Wilding's three production installations in Metropolitan Detroit.

Overesch until now was in the Detroit office of McCann-Erickson, Inc.

**Casey Named to Head
 Holland Wegman Sales**

F. (Pete) Casey has been promoted to the newly created post of Sales Manager of Holland Wegman Productions, Incorporated.

Casey began as a writer-director for Holland Wegman Productions in 1964 and since 1966 has been an account executive. Prior to 1964, he was associated with area broadcasting stations in various areas of television production and as a radio personality.

As Sales Manager, Casey will coordinate and supervise sales for Holland Wegman Productions, and for Holland Wegman Laboratories.

**Phyllis Abboud Heads New
 Acme Labs Chicago Office**

Phyllis Abboud has been appointed to head the new Chicago office for Acme Film & Videotape Laboratories. She has become Midwest account supervis-

or. Mrs. Abboud will be serving stations, networks, agency producers, educators, hospital and industrial users of tape and film in the Midwest.

For the past two years she has been Sales Supervisor WTTW Recording Services Chicago. She is well known in the film and tape field in the Midwest. Mrs. Abboud is experienced in ad agency film-tape production because she has worked as a production manager in the field herself. She has worked for Bozell & Jacobs in Omaha; and later, she worked for Keiffer Associates in Des Moines.

**Alan Cagan Named VP,
 Partner at Musifex, Inc.**

Alan E. Cagan has been appointed vice president and general partner of Musifex, Inc., according to an announcement by E. Robert Velazco, president.

Cagan is a graduate of Boston University, where he majored in music. For the past year, since he joined Musifex, he has been involved in over 100 productions requiring the selection of library music and sound effects. In addition, his film music original compositions have been heard on many TV commercials and industrial films.

**Githens Named to Jayark
 Corp. Board of Directors**

W. French Githens has been elected to the board of directors of the Jayark Corporation (OTC), New York City, manufacturers of audio-visual equipment and programs.

Jayark recently appointed Githens vice president, educational sales. He was former president and editor of Newsreel.

is open... Push, it's closed! The HFC Plastic Film Case is the addition to the long line of film handling equipment available Hollywood Film Company. Push button control certainly makes this all new case! To close the case, simply push in the corner buttons, to open it, pull the buttons out. No twisting or turning or fussing with antiquated devices. Look at some of these other features... Instant, moisture resistant and shock resistant. A label holder is permanently attached to the case labels can be changed in seconds. Mailing costs are reduced to the light weight of the case. A convenient handle is provided for easy transporting of film from place to place.

Also available are the HFC and Goldberg plastic and steel reels, cans, fibre cases and split reels. HFC reels combine quality and economy and afford the proper protection for your film yet are such weight savers they can be shipped at extremely low costs.

The Goldberg reels are the finest made, you can buy no better reel.

Reels and containers available in 8mm, Super 8, 16mm, 35mm and 70mm from 50' to 5,000' capacity.

For further information concerning these or any of the long line of HFC professional film handling equipment, write, phone, or wire today to your nearest HFC office, Hollywood, Chicago, or New York City.

Jam Handy Names Four to New Executive Posts

Jam Handy Productions, business communications division of Tele-Tape, has established four new posts as part of its service expansion program.

Fred England, secretary-treasurer, has assumed broader duties as vice president in charge of finance.

James Grann, formerly in charge of production, has been appointed vice president in charge of operations.

Paul Kelcourse, account executive, has been named vice president of East Coast sales and will headquarter in New York.

H. D. (Scotty) Wagner has been named vice president in charge of management development.

Ushakoff, Wilber Head New Center for Communications

Alex Ushakoff, Jr. has been named president and Thomas E. Wilber has been named executive vice president and treasurer of Center for Communications Incorporated.

Ushakoff has served as a research associate at the Film Study Center of the Carpenter Center for the Visual Arts at Harvard University. He is presently a professor of Scientific Communication at Boston University and a member of the faculty at North Shore Community College where he teaches Engineering and Instrumentation.

He has also been a consultant in educational technology to many organizations, including the United Nations; and has produced films for the U.S. Information Agency, the Department of Agriculture, the Massachusetts Department of Education, the governments of West Germany and Austria and various international films.

Wilbur joins CCI from a position as director of management communications of Indian Head Incorporated of New York City. At Indian Head he was responsible for audiovisual and other communications.

Hance Heads A-Vs for Great Northern Railroad

Great Northern and Northern Pacific recently appointed Richard K. Hance as audio-visual director for the two railways with operations centering in the jointly-owned auditorium in the railway building in St. Paul.

Named as auditorium manager is Duane R. Casmey who has been audio-visuals technician at the auditorium since its opening.

The extensive new audio-visual facility, completed in Spring, is regarded as one of the finest of its kind in the nation.

NAVA Names Dougherty Director of Information

Cornelius J. (Con) Dougherty has been appointed Director of Information of the National Audio-Visual Association, Inc. He succeeds James C. Threatte, who has resigned.

In his new position, Dougherty will be responsible for the development, implementation and coordination of the Association's press, public relations, and member information programs.

Levy Heads Angenieux Motion Picture Sales

Bern Levy has been appointed motion picture sales manager for Angenieux Corporation of America. In his new post, he will be responsible for the sale of Angenieux lenses for motion pictures and closed circuit television.

LaRoche Appointed to Zapel Executive Post

Zapel Studios, Inc. of Chicago has appointed Karl LaRoche, vice president and executive producer.

LaRoche, formerly with the Radio Corporation of America, was manager of production services RCA's Redstone Pictorial Services Project in Huntsville, Alabama. He is an active member of the Society of Motion Picture and Television Engineers.

Engineers, the Society of Photographic Scientists and Engineers, the American Society of Photogrammetry and the American Institute of Aeronautics and Astronautics.

Unilux Names Schubert Western Regional Manager

Unilux, Inc. has named Howard E. Schubert of Seattle, Wash., western region sales manager for the company's new electronic lighting system for motion picture production.

Due to his extensive photography background including aerospace photo-instrumentation, Schubert will also serve as a nationwide consultant for technical applications of the system.

and Oxberry Corp. He will further extend Research Products international marketing of 65mm, 35mm, 16mm and super 8 to motion picture processing laboratories, optical printing firms and government agencies from headquarters at 45 O Kings Highway, Old Greenwich, Conn.

Spielvogel to Pelican

Bert Spielvogel has joined Pelican Films, Inc., New York, director/cameraman.

Previously, Spielvogel was director/cameraman for MP and was director of photography for On Film, Inc.

Speletich Heads Mitchell Camera Commercial Sales

Kalman Spelletich, Jr., Corona del Mar, Calif., was named Manager of Commercial Sales for Mitchell Camera Corporation.

Spelletich has more than 22 years experience in the professional motion picture and audio-visual industries.

Spelletich, who formerly was manager of Audio-Visual Sales for Technicolor, Inc., Commercial and Educational Division, received his B.A. from Grinnell College in 1942.

Two in New Posts at Bill Stokes Associates

Bill Stokes Associates, Inc. has appointed Sherald "Brownie" Brownrigg as head of the motion picture department and Phil McBride as manager of still photography.

Brownrigg, a veteran of 13 years in the film industry, has produced and directed over 250 business films and TV commercials. He was previously associated with two other Dallas motion picture production firms and served as an Army combat motion picture photographer.

McBride, a native of Winnipeg, Manitoba, was associated with Panda Associates, Toronto, a leading Canadian commercial and architectural photography studio, for the past two years.

Silberlicht in East for Research Products, Inc.

Jack W. Silberlicht has been named consulting systems engineer and sales director in the east for Research Products, Inc., Hollywood, Calif. manufacturer of optical printers and related equipment.

Silberlicht holds a master's degree in electrical engineering and has held engineering and sales posts with Hazeltine Corp.

Reeves Video Names Cook Division Sales Executive

Thomas L. Cook has been named as a sales executive Reeves Video Division of Reeves Broadcasting Corporation.

Cook comes to Reeves from CBS-TV in New York where he was a staff associate director. Credits include "Love of Life," "Secret Storm," "Camera III," "Captain Kangaroo," special news events, and other CBS programming.

At Reeves he will be involved in program production and post production services. Through the Airmobile-Video System, Reeves provides cameras, video tape recorders, and other below-the-line personnel and services.

'Judging' the Film Festivals

YOU'VE JUST PRODUCED or sponsored what you believe to be a truly outstanding factual film. "This is an award-winner" in your estimation! What film competition is best for you? How much do they cost to enter and what's the relative merit of each of these?

These are fair and often-asked questions which come to the editors of BUSINESS SCREEN and are only partially answered by this month's compilation of 1969 film award events. It's especially important because of the recent proliferation of film festivals in a growing number of U.S. cities as well as the considerable number of festivals abroad. This past year alone, the U.S. Council on International Nontheatrical Events served some 65 film festivals on behalf of U.S. film producers and sponsors.

And there's our first *answer*: if your award candidate is suitable for international competition or your company has extensive export sales interests which indicate value of overseas exposure, it's easy to compete: simply contact CINE in Washington, D.C. and count on careful evaluation of your entry before it is submitted to the proper festival (or to several of them) overseas in 1969.

The U.S. competition scene is a bit more complicated. First of all there are excellent specializing awards contests, such as the annual National Safety Film Contest and the annual Freedoms Foundation Awards given to subject matter on "The American Way of Life." Shareholder "annual report" films are considered as part of the FINANCIAL WORLD judging; the American Personnel & Guidance Association has judged films suitable to its specialized field.

Before we discuss other U.S. festival competition, let's put down what we believe to be important criteria in judging any such event, from overseas or here at home:

1. Has the event plainly stated its ownership or sponsorship? In other words, is the competition seriously interested in advancing the film medium?

2. Our *second* important criterion: when films are entered in any competition, names of members of juries should be disclosed, together with their qualifications to judge all entries.

3. Our *third* criterion: are films judged in special categories, i.e. as agricultural, scientific, non-sponsored educational, etc.? Any event which sets up judgement on industrial films, for example, as a single-class overlooks the *specializing content* of these subjects.

Finally, after you've studied the list of judges, noted the supporting groups involved and analysed the categories for proper entry of your prospective award-winner, consider a few

more key points:

How much are the entry fees? How long is your valuable color film print going to be "tied up" in the judging process, between date of original entry and final awards selection? Films aren't made to win awards; every print traveling along the festival circuit has to be deducted from those otherwise available to reach *your intended audience*.

This publication accords "First Category" ratings to film festivals which either specialize in subject matter *i.e. safety films judged by qualified experts in the National Safety Film Contest* — or special category or grouping of "business and industry" films in relevant categories within general festivals, such as EFLA's American Film Festival.

You can be sure that the U.S. film awards calendar is still incomplete and will remain so until this country has one nationwide competition for outstanding business/industry films endorsed, held or supported by such groups as the National Association of Manufacturers or the U.S. Chamber of Commerce. Then the medium will be properly exposed to peer-groups of executives genuinely concerned with content and values of this powerful tool.

Meanwhile, we would encourage such groups as the National Sales Executives or the Public Relations Society of America to consider review and exhibition of the year's best films in their respective fields. Something wonderful happens when both prospective and actual users of the medium for these specific, important fields get to share the most useful films of the year.

Regional film festivals, embracing all phases of the medium, are commendable when properly run and well-supported. They provide a means of exhibition to regional executives and thought-leaders. Let's just make sure that our *purposeful* industrial film isn't playing "second-fiddle" to box-office "draw" and publicity given feature (entertainment) films and a multitude of television commercials.

This latter group has excellent competition of its own: on the East Coast, there's Wally Ross's American TV Commercials Festival and, out West, the Hollywood Advertising Club, gives broad exposure to commercials. And if you want to look afield, both theatrical screen ad films (a major medium abroad) and TV commercials compete at the International Screen Advertising competition held in Europe.

For our money: the year's best competition for *our* business/industrial film medium is that International Industrial Film Festival event held in a different European capital each year. All of Europe's industrial federations join in sending their best to this event.

SMPTE Elects Officers, Confers 15 Fellowships

FIFTEEN INDIVIDUALS were elevated to fellowship in the Society of Motion Picture and Television Engineers at the group's 104th Technical Conference and equipment Exhibit held in Washington in November.

The distinguished grade of Fellow Member was conferred on the fifteen at special ceremonies by SMPTE President G. Carleton Hunt. An SMPTE Fellow is one who is not less than 30 years of age and who has, by his proficiency and contributions, attained an outstanding rank among engineers or executives of the motion picture, television or related industries. Those upon whom the honor was conferred were:

Dr. E. H. August Arnold, president, Arnold and Richter KG, Munich, Germany; Walter L. Farley, Jr., regional sales manager, Eastman Kodak Co.; Thomas W. Hope, market analyst, Eastman Kodak Co.; A. Alvin Jackson, general manager, MGM Laboratories; Marvin B. Jacobs, optical engineer (retired), American Broadcasting Co.; Earl W. Kage, manager, research studios of the Kodak Research Laboratories; Kurt E. Kanis, vice president in charge of New York operations, DeLuxe-General Laboratories; Charles F. Lobalbo, manager, motion picture and television sales, Philip A. Hunt Chemical Corp.; Robert A. Morris, technical associate, Eastman Kodak Co.; Howard F. Ott, technical associate, Eastman Kodak Co.; Frank V. Papalia, general manager, Precision Film Laboratories; A. Earl Quinn, senior development engineer, Eastman Kodak Co.; Dr. Robert Richter, general manager and director of engineering, Arnold and Richter KG, Munich, Germany; Raymond J. Wulf, chief engineer, MPEM East Coast Div., Eastman Kodak Co.; and Roland J. Zavada, senior product engineer, Film Services Div., Eastman Kodak Co.

New officers

The following slate of national officers was elected to head SMPTE for the year 1969-70:

President, Deane R. White, Photo Product Dept., E. I. du Pont de Nemours & Co., Inc., Parlin, N.J.; *Executive Vice-President*, Wilton R. Holm, Association of Motion Picture & Television Producers, Inc., Hollywood, Calif.; *Editorial Vice-President*, Rodger J. Ross, Canadian Broadcasting Corp., Toronto, Ont., Canada; *Conference Vice-President*, E. B. McGreal, Producers Service Co., Glendale, Calif.; *Secretary*, H. Theodore Harding, E. I. du Pont de Nemours & Co., Inc., Wilmington, Del.

Newly elected Governors of the Society for the 1969-70 term are: *Eastern Region*, Arthur J. Miller, Fort Lee, N.J. and Richard E. Putman, General Electric Co., Syracuse, N.Y.; *Central Region*, Allan F. Hilliard, George W. Colburn Laboratory, Inc., Chicago, Ill. and William A. Koch, Eastman Kodak Co., Los Angeles, Calif.; *Canada*, Roger J. Beaudry, Pathe-Humphries of Canada, Islington, Ont., Canada.

We know every way to hurry without hurrying!

We hurry everything but quality. We've got everything going for us so we can hurry without hurrying. We deliver faster than any laboratory in the country. Quicker than laboratories "just around the corner" from you wherever you are. How come? We start every job the very minute it comes in. In by 9—out by 5 service is routine on most processing. Our delivery trucks rush to waiting jets. And with jets and air expeditors what they are, that almost always means one day service. We have an even-faster service where "you set the dead-

line—we meet it." It's called Acme Accelerated Service. Your order receives uninterrupted attention from the moment it enters our doors until it's back in your hands. Besides, we know what we're doing. Our technicians average 14 years of experience (with us!). Uniquely, we're both a film—and a videotape laboratory. No time is lost in between laboratories. Quality? They call us Acme. Deservedly. Sure our competitors produce quality. But slowly. We're the laboratory that delivers quality in a hurry—one day service to anywhere. The best quality, too.

Why not make us prove it? At least send for our new 28-page illustrated catalog & price list. We'll be glad to hear from you. Write ACME Film & Videotape Laboratories, a Subsidiary of Filmways, Inc. **Hollywood:** 1161 N. 1969 FILM FESTIVAL PLANNING GUIDE

An exclusive review of 1969 film festivals and awards competitions.

THE AMERICAN FILM FESTIVAL

Sponsored by the Educational Film Library Association
New York City May 14-17, 1969

The 1968 American Film Festival, sponsored by the Educational Film Library Association, representing school, university and public libraries, and film libraries throughout the U.S. will be held May 14-17, 1969 at the New York Hilton Hotel, New York City.

CATEGORIES: 32 major areas of education and information, art and culture, religion and ethics, business and industry, and health and medicine will be offered for final judging by screening groups during the Festival. Elections will have been made by pre-screening juries for final entries.

AWARDS: Blue Ribbon (trophy) Awards to be presented at banquet, Friday, May 16, 1970 **FESTIVAL:** May (Exact dates not set). Closing date for entries: Jan. 31, 1969.

THE EIGHTH ANNUAL FILM FESTIVAL AMERICAN PERSONNEL & GUIDANCE ASSOCIATION

Held in conjunction with the Annual APGA Convention at Las Vegas, Nev.,
March 30-April 3, 1969

CATEGORIES: Films and filmstrips in the following categories will be presented: Inter-Personal Relations; Educational and Career Planning, Rehabilitation; Counseling; The Profession, Principles and Techniques; and Guidance Films from other countries.

SELECTION: All films and filmstrips presented at the Film Festival are previewed before the final invitation to the producer. Generally 75 to 100 films are previewed, and 25 to 30 are chosen. Selection is aimed to provide as wide a program as possible.

INFORMATION: Further information about APGA Film Festivals is available from: APGA Convention Film Festival, 1607 New Hampshire Avenue, N. W., Washington, D.C. 20009.

THE TENTH ANNUAL AMERICAN TV COMMERCIAL FESTIVAL

New York City—May 12, 1969
Other U. S. & Foreign Cities—May-June

ELIGIBILITY: Open to commercials broadcast in the U.S. and Canada for first time during

1968. No limit on entries from sponsors, agencies, station or production companies.

CATEGORIES: TV-Forty product classifications plus one category for Classics, which must have been first telecast more than five years ago. A special International TV and cinema category is open to entries from all other countries. Radio entries are grouped by size of market reached.

JUDGING: By ten regional councils of prominent advertising executives, headed in 1969 by David Ogilvy, chairman of Ogilvy & Mather International.

CRITERIA: Outstanding commercials . . . based on strength of the sales message, visual and aural appeal and all-over technical skill.

AWARDS: A golden "CLIO" statuette to each Best of Product Category and Special Citation winner. Certificates to Runners-Up in both American and International competitions.

INFORMATION: 16mm reel of winners is available from Wallace A. Ross, Director, American TV Commercials Festival, 6 West 57th Street, New York, New York 10019. Phone: (212) 581-7060.

THE SECOND ANNUAL ATLANTA INTERNATIONAL FILM FESTIVAL

Atlanta, Ga. April 8-13, 1969

MANAGEMENT: J. Hunter Todd, Executive Producer. Mailing address: Drawer 13258K, Atlanta, Ga. 30324. Phone: (404) 633-5011. Cable Interfilm.

SUPPORTING GROUPS: "Forward Atlanta" (Atlanta Chamber of Commerce); The Atlanta Arts Alliance; Eastern Airlines (official airline).

ENTRY DEADLINE: February 15, 1969.

CATEGORIES (and entry fees): Feature film (\$150); short subjects (\$50); television commercials (\$30 each); experimental films (\$25).

AWARDS: The Golden Phoenix (best of festival); The Silver Phoenix (best film in each category); gold, silver and bronze medals for best films in such specific categories as 1. industrial; 2. educational; 3. sales; 4. training; 5. economics; 6. television; 7. safety; 8. public relations; 9. sports, etc.

OTHER AWARDS: The Eastern Ionosphere Award (best film dealing with flight); The Eastman Award (\$1000 grant of Eastman color motion picture film); The Regency/Hyatt, Award (best film by a southern U.S. film producer); and The "Forward Atlanta" Award (best film by an Atlanta producer).

SHOWING SITES: preliminary screenings: Regency Hyatt House; Arts Alliance Film Center; feature and short subjects (35mm) winners: Roxy Theater, April 8-12.

THE 5TH CHICAGO INTERNATIONAL FILM FESTIVAL

Chicago—November 8-19, 1969

CATEGORIES: Industrial film competition plus seven other categories including entertainment, experimental, etc.

ELIGIBILITY: 35mm, 16mm and videotape may be entered in the industrial competition. Films produced in 1968 or 1969 are eligible. Each entry should be accompanied by a statement of purpose and specification of the particular audience for which the film was intended. Entry fee is \$35.

AWARDS: Awards are made for commercially produced and in-plant produced films in the areas of sales, marketing, public relations, training and recruiting. A total of six Gold and Silver Hugo Awards are made in addition to the issuance of certificates of participation for all films accepted in the competition.

SPECIAL FILMS: Industrial film entries which, because of budget, size, multiplicity of images or screens, are termed "special" and treated in a separate category.

DEADLINES: Completed entry forms must be in Chicago by Sept. 15, 1969. Films must arrive at festival headquarters by Sept. 20, 1969.

SCREENING: Screenings are free and open to the public. This includes a screening at the festival theater as well as additional industrial film programs at a separate location.

INFORMATION: Address all inquires to Michael J. Kutza, director, 5th Chicago International Film Festival, 235 W. Eugenie St.-T/2, Chicago, Ill. 60614.

THE LEADING ANNUAL EVENT OF THE PROFESSIONAL FILM & TV INDUSTRY

The only completely inclusive Festival which encompasses all phases of film productions starting with Filmstrips, Industrial Films, Television and Cinema Commercials up to Filmed Introductions and Lead-In titles as well as Public Service Television Programs and Multi-Media Productions.

The main purpose of the Festival is to honor those individuals and companies who contribute with their outstanding creations to the greatness of the industry.

(including government films) for submission to overseas film festivals. CINE is supported by interested patrons (associate, professional and sustaining).

THE 17TH ANNUAL COLUMBUS FILM FESTIVAL AND AWARDS

Sponsored by the
Film Council of Greater Columbus
in association with the
Columbus Area Chamber of Commerce

Producers Showcase Screening at Neil House Motor Hotel, October 29-30, 1969. Awards Screening (for General Public) at Center of Science and Industry Auditorium, 280 East Broad St., Columbus, Ohio, from 1 to 5 p.m. Sunday, Nov. 2, 1969. Chris Awards Banquet: Thursday, October 30 at 7 p.m., Neil House Motor Hotel.

ENTRIES: Film producers and sponsors are invited to enter motion pictures and filmstrip produced in 1967, 1968 and 1969 provide they have not been previously submitted to any Columbus Film Festival. Entries (in the categories enumerated below) must be accompanied by 4x6 cards (for preview committees) noting type of audience intended.

Films are judged by professionals in the various fields. Entry fee for all motion pictures, regardless of length, plus a new film strip category is \$25. Entries will be accepted beginning February 1 and closing date is July 31, 1969 at 5 p.m. E.S.T. Each print should be made available for judging for at least one month or longer. If less time is available, the category chairman should be so informed. This year no film will be accepted after the closing date for entries, August 1.

CATEGORIES & CHAIRMEN: (Motion picture should be shipped directly to the following): Business & Industry (job training; sales promotion; industrial relations; public relations) *Miss Catherine Benjamin, Chair., Ohio Bell Telephone Co., Film Library, 35 E. Gay St., Columbus, Ohio 43215*. Information and Education (classroom instructional films, specialized instructional; general information); *Thomas Kraner & Wm. Schmitt, co-chairmen; Center of Science & Industry, 280 E. Broad St., Columbus, Ohio, 43215*; Health & Mental Health (health & hygiene; mental health; general medicine; professional medicine; dental). *Florence L. Fogle, Assoc. Professor of Health Education, Ohio State University, 321 W. 17th St., Columbus, Ohio 43210*; Travel U.S. & Foreign. *Donald F. Prugh, Film Council of Greater Columbus 280 East Broad St., Columbus, Ohio 43215* Religious Films, *Miss Delores Sherwood Augsburg Publishing House, Audio Visual Dept., 57 E. Main St., Columbus 43215 Ohio*; Graphic and Theater Arts; *Darrel McDougle, Chairman, S. N. Hallock, Co-chairman, Center of Science & Industry, 280 E. Broad St., Columbus 43215, Ohio*; Filmstrip

Category: Dr. Catherine M. Williams, College Education, OSU, 29 W. Woodruff Ave., Columbus, Ohio 43210.

AWARDS: This is the 11th year of the Chris Statuette Awards, presented to the outstanding films in each category. Films receiving the Chris Statuette must be voted "best in photography, story value, and technical aspects of production." Chris Certificate Awards are given to motion pictures considered "finalists" but not receiving the statuette award.

FOR ENTRY BLANKS: Write to Miss Mary Speer, Film Library, Columbus Public Library, 96 South Grant Avenue, Columbus, Ohio 43215.

16TH ANNUAL "DAY OF VISUALS"

Sponsored by the

National Visual Presentation Assn.

New York, New York—September, 1969

The 16th Annual "Days of Visuals" Awards competition will be held in New York City, New York, September, 1969. An announcement of the exact date and location will be made.

The program includes two days of seminars, a luncheon program and the Annual Awards Banquet.

Program Chairman is Les Waddington (J. Penney Co.); Awards Chairman is Joseph J. Kincaid (Presbyterian Board of National Missions).

For information: write "Days of Visuals" Chairman, National Visual Presentation Association, 663 Fifth Ave., New York, N.Y.

FARM FILM FOUNDATION PROFESSIONAL IMPROVEMENT AWARDS

AWARDS: For the 14th consecutive year, an engraved certificate and \$500.00 will be given to an active member of the American Association of Agricultural College Editors, who is selected by a committee of three Judges as having made, through work in motion picture production, the most outstanding contribution to the advancement of agriculture, home economics, rural-urban relations, and the public interest during the past two years. Honorable Mention Awards of \$50.00 each may also be given at the discretion of the Judges.

PRESENTATION: The Awards will be presented at a dinner co-sponsored by the Farm Foundation and the Foundation for American Agriculture at the annual meeting of the American Association of Agricultural College Editors scheduled for July 14, 1969 at The University of Missouri, Columbia, Mo.

ELIGIBILITY: Any active member of AAACE engaged in some phase of motion picture production is eligible to apply for the Award.

ENTRIES: All entries and inquiries should be sent to Edith T. Bennett, Farm Film Foundation, 1425 H St N.W., Washington, D.C. 20005. Closing date for entries is May 1, 1969.

FREEDOMS FOUNDATION AWARDS

Sponsored by the Freedoms Foundation
Valley Forge, Pennsylvania
Closing Date for Entries: November 1, 1969

CATEGORIES: Consideration is given to all films produced or released during 1969, which are aimed at building a better understanding of the American Way of Life.

AWARDS: A distinguished jury of State Supreme Court jurists and other eminent citizens selects one film for the top award and approximately 10 others for the George Washington Honor Medal recognition. Awards will be announced at Valley Forge early in 1970.

TO NOMINATE: Nomination forms are available from the Freedoms Foundation, Valley Forge, Pennsylvania.

ANNUAL INFORMATION FILM PRODUCERS OF AMERICA AWARDS

Sponsored by the Information Film Producers of America, Inc.

"Cindy" Awards Presented at Annual Meeting of IFPA, Sheraton-Palace Hotel, Oct. 16-18, 1969, San Francisco, California

ANNUAL AWARDS COMPETITION in recognition of outstanding factual films. The purpose of the IFPA awards is to stimulate constant improvement in the quality of informational, public relations and educational films, and their effective utilization by industry, business, education and government.

CATEGORIES: Public Information, Technical Information, Promotion, Industrial Relations, Education and Enrichment.

ENTRY INFORMATION: Any film completed for release during the period August 1, 1968 thru August 1, 1969. More than one film may be submitted by the same member or organization. Entry deadline is August 1, 1969. Entry fee per film is \$15 for members, \$25 for non-members. For additional information, write Film Competitions Chairman, Information Film Producers of America, Inc., P.O. Box 1470, Hollywood, Calif. 90028.

THE 16TH INTERNATIONAL ADVERTISING FILM FESTIVAL

Cannes—June 16-21, 1969
Sponsored by the Screen Advertising World Association Ltd.

MANAGEMENT: The Executive Council of S.A.W.A. is fully responsible for all policy matters in relation to the Organization of the Festival. All inquiries should be made to the Festival Director: Mr. B. H. Annett, Head

Office, International Advertising Film Festival, 35 Piccadilly, London, W1V 9PB, England. Phone: 01-734-7621

ENTRY DATES: Books of Entry Forms and Delegate Registration Forms will be issued from the Head Office during January.

CATEGORIES: Films will be judged by product categories. There will be 17 individual categories in each of the two groups — Cinema and Television and details of each category are included in the film entry books together with the regulations governing the entry of films.

JURIES: Two international juries, one for the Cinema and the other for the Television group, will be selected to judge all the entries.

THE TENTH ANNUAL INTERNATIONAL BROADCASTING AWARDS

Sponsored by the Hollywood Radio and Television Society

ELIGIBILITY: Open to radio and television commercials broadcast during 1969 in any nation in the world.

CATEGORIES: Twelve television and eight radio commercial categories. In addition, special sweepstakes awards for both television and radio at annual presentation dinner.

JUDGING: Forty creative screening panels meeting in several countries make initial judging. Final judging panel consisting of 23 judges representing advertising companies, advertising agencies, production companies and broadcasters.

CRITERIA: Excellence in broadcast and television commercial presentation including audio and visual quality, sales message impact and overall technical skill and technique.

AWARDS: Special trophy presentations to winners in 12 television and 8 radio categories. IBA awards to approximately 250 finalists in judging. And, a special "Man of the Year" award presented annually to the person judged the outstanding man of the year in international communications.

INFORMATION: Additional information, entry forms and data on past winners may be obtained from the Hollywood Radio and Television Society, International Broadcasting Awards, 1717 N. Highland Ave., Hollywood Calif. 90028. Phone: (213) 465-1183.

When writing or contacting festivals, please be sure to mention that you read about it in **BUSINESS SCREEN**.

All you need to make a film is a Bolex and a lens.

All you need to make a film is a Bolex and a lens.

And since Bolex is a system as well as a camera, you can choose just the right Bolex and just the right lens for your particular educational purposes.

Whether you're filming a psychological experiment, making a teaching film, demonstrating a physics principle, or teaching film making, Bolex is the most

practical, the most beautifully uncomplicated, and the most completely sophisticated system, for the price, that exists today. You can add a magazine to the Bolex Rex-5 for 12 minutes of uninterrupted shooting. You can have synchronous sound. You can zoom or stay put with a fast wide angle lens.

You can accommodate a Bolex for macro or micro cinemography. You can use the Bolex hand-held, or mount it on a tripod. You can work in slow motion, or speed up the action far beyond normal.

In short, you can do anything with the Bolex. Just what did you have in mind?

Write to Paillard Inc. 1900 Lower Road, Linden, N. J. 07036, for copies of the special Bolex magazine issues on T.V. communications filming, and educational film making.

**INTERNATIONAL FILM & TV
FESTIVAL OF NEW YORK**

New York City—Americana Hotel,
Oct. 14-17, 1969

PURPOSE: To honor those individuals and companies who contribute to the greatness of the industry with their outstanding creations. A coincidental seminar held during the festival provides a showcase for new developments and a forum for the sharing of new ideas and techniques.

CATEGORIES: Inclusive, encompassing all phases of film production from filmstrips, industrial films, television and cinema commercials to filmed introductions, titles as well as public service television programs, featurettes and multi-media presentations.

AWARDS: A Grand Award is given to the most outstanding entry in each section and Gold, Silver and Bronze medals in each category under each section, as well as Special Achievement Awards.

ENTRY INFORMATION: Any production completed after September, 1968 is eligible for entry. There is no limit to the number of films, programs or commercials which may be submitted.

ENTRY DEADLINE: August 1, 1969.

INFORMATION: Complete data and entry information is available from Herbert Rosen, festival chairman, Industrial Exhibitions, 121 W. 45th St., New York, N.Y. 10036.

**THE 10TH INTERNATIONAL
INDUSTRIAL FILM FESTIVAL**

Sponsored by
The Confederation of European
Industrial Federations (CEIF)

The industrial federations of West Europe, through their Confederation headquarters (Paris, France), send their best industrial motion pictures, chosen in national competition, to a different European capital each year for the world's most formidable competition. Entries from other lands, including the United States, must be submitted through similar national industrial federations, upon formal invitation to compete from CEIF.

Eight Official Categories of Festival

Category A: Films about subjects of general industrial or scientific interest (economic, social or technical) or films contributing to the prestige of a sponsor, intended primarily for general audiences.

Category B: Films, other than sales films, about specific industrial products, materials or projects, intended primarily for general audiences.

Category C: Films, other than sales film about specific industrial products, materials or projects intended primarily for special audiences.

Category D: Films about specific products or services, with a direct sales purpose, intended either for general audiences or dealers (excluding films for showing in paid time in cinemas or on television).

Category E: Films about scientific principle and research (excluding film used as a research tool) intended primarily for special audiences including educational establishments.

Category F: Training films (for example films on management measures for increasing efficiency, productivity, automation, human relations, vocational guidance) intended primarily for special audiences.

Category G: Films on accident prevention, occupational diseases, rehabilitation, health education and other aspects of social security.

Entries: An official invitation to participate must be extended to the National Association of Manufacturers, as the U.S. host group; a sub-committee appointed by the N/A/M has worked in cooperation with the U.S. Council on International Nontheatrical Events (CINE) to select official U.S. entries, if invited. Readers of this publication will be kept informed when the list for 1969 has been selected.

THE 26TH ANNUAL NATIONAL SAFETY FILM CONTEST

Sponsored by the National Committee on Films for Safety

ELIGIBLE FILMS: All motion pictures produced or released during 1968 whose primary objectives are safety or which have important accident prevention sequences. Contest entry deadline will be February 19, 1969.

CATEGORIES: Motion pictures, (16mm) in each of five fields: 1. Occupational. 2. Home. 3. Traffic and transportation. 4. Recreational and Sports, 5. General. Judged separately are television and theatrical subjects, TV shorts and spots.

AWARDS: Bronze Plaques will be awarded to top winners in each of the various areas of safety. Award of Merit Certificates will be given to other films for special reasons of subject treatment, production excellence and/or unusual contribution to safety. At the discretion of the judges, awards may be given separately for "instruction-teaching", "documentary," and for "inspirational" purposes.

One of the plaque-winning films may be designated "Safety film of the Year" and receive appropriate recognition.

PRESENTATIONS: Films winning the Bronze Plaque will be shown in October during the National Safety Congress and Exposition in Chicago, Ill. Plaques will be presented at that time to representatives of sponsors of these films by the Committee's chairman. Certificate of Merit winners will receive their awards after the final judging which is in April. All winners will be notified immediately after the judging.

FORMATION ON AWARDS PROGRAMS: Write Wm. Englander, Secretary, National Committee on Films for Safety, 425 North Michigan Avenue, 5th Floor, Chicago, Illinois 60611.

SAN FRANCISCO INTERNATIONAL FILM FESTIVAL

San Francisco—October, 1969

CATEGORIES: Within "Films for Communication" section include Educational (classroom training); Enlightenment (information & enrichment); Documentation (essays & factual); and Persuasion (promotion & influence).

ENTRY DEADLINE: (and fees): Official entry deadline to be announced. Entry fee is \$40.

AWARDS: Golden Gate (plaque)-1st; Silver Plaque-2nd; Bronze plaque-3rd; plus "Best Category" plaque and "Honorable Mention" awards in each category.

FORMATION: For entry data and other information, write San Francisco International

Film Festival, 425 California, San Francisco, Calif. 94104.

U. S. INDUSTRIAL FILM FESTIVAL

Chicago—April 24, 1969 at Palmer House Hotel.

PURPOSE AND OBJECTIVES: To highlight the industrial film and its effectiveness as a modern communications medium; to provide producers sponsors and distributors an opportunity to showcase their productions; and to enable the industry to maintain an ever increasing standard of production excellence through competitive comparison.

ELIGIBILITY: 16mm industrial motion pictures and 35mm filmstrips produced for industry, associations, government, religious or educational organizations, designed primarily to inform, motivate, stimulate or educate their audiences.

JUDGING: Groups and categories have been established to provide the most equitable bases for judging entries of all types. Groups consist of films that are commercially produced, government produced, in-plant productions or university produced. Productions of these four groups of producers do not compete against each other but are judged within their own group alongside films produced under comparable circumstances. Within each group, there are 13 categories of subject matter such as advertising, fund raising, public relations, etc. Entries with an English sound track or accompanying English script are invited from throughout the world.

ENTRY DEADLINE: March 1, 1969.

FORMATION: For complete details and entry information, write J.W. Anderson, festival chairman, U.S. Industrial Film Festival, 333 N. Michigan Ave., Chicago, Ill. 60601.

THE NINTH ANNUAL WESTERN HERITAGE AWARDS

Oklahoma City, Okla.

Deadline: January, 1969

Awards Ceremony: April 1969

Sponsored by The National Cowboy Hall of Fame and Western Heritage Center

CATEGORIES: Best Western motion picture; documentary film; fictional television program; novel; non-fiction book; juvenile book; art book; magazine article, short story, or poetry; and musical composition. The Awards hope to bring about a desire to create a greater appreciation and a better understanding of our nation's Western heritage.

ENTRY INFORMATION: Application blanks can be obtained from the Public Relations Dept., National Cowboy Hall of Fame, 1700 N.E. 63rd St., Oklahoma City, Okla. 73111. Phone: (405) GR 8-1811.

President Reid H. Ray presents one of the international awards before diplomatic representatives.

163 "Golden Eagles" — several international awards presented

11th CINE Awards Festival Honors Top Films

GLOBAL OVERVIEW of the vast and diverse events which comprised the 1968 international film festivals specifically devoted to the informational motion picture medium was provided in Washington, D.C. on Friday, November 15, when the Council on International Nontheatrical Events (CINE) held its 11th Annual Awards Ceremonies and Exhibition of Films of Merit.

This year's selection of U.S. nontheatrical, short subject and television documentary motion pictures, comprising 163 professional and amateur films, was made from a total of 1,300 subjects submitted to nationwide juries organized for this purpose by CINE. The 163 "analyst" films selected all receive CINE's "Golden Eagle" and amateur entries are awarded CINE "Eagles" if deemed suitable for international competition.

The success of this year's program was evident to the hundreds of producers, sponsors and guests of CINE who filled the auditorium of the National Education Association where presentation ceremonies were held on Friday afternoon and evening.

— 59 major prizes and awards were won by U.S. films around the world.

— 91 other entries received honor certificates of participation at various events, signing their programming at various festivals and often the highest honor awarded.

Among the ten major world awards pre-

sented during impressive evening ceremonies in the nation's capitol were those made by His Excellency, Egidio Ortona, Ambassador of Italy. These included the top Golden Mercury statuette of the Venice Golden Mercury Competition given to *Momument to the Dream*, produced by Guggenheim Productions, Inc. for the American Iron & Steel Institute.

Ambassador Ortona also presented CINE with the Grand Prix "for the best group of films from any nation" given by the Cortina Film Festival; another Grand Prix to CINE for "best national selection" at the Trento Film Festival this year. And the Grand Prix of the 15th annual International Electronic, Nuclear and Teleradio Cine Exhibition at Rome was presented to *Mind and Hand*, produced by Graphic Curriculum, Inc. for the National Broadcasting Company.

Dr. Kurt Krejci, Press Attache of the Embassy of Austria, heralded the major awards given U.S. industrial motion pictures at the 9th International Industrial Film Festival held in Vienna this year. Top winner of a handsome Grand Prix as well as a first category award at Vienna was *Memento*, produced by the Center for Mass Communication of Columbia University Press for the American Telephone & Telegraph Co. Other Vienna trophies presented by Dr. Krejci included second prizes to *Aluminum* (produced by Larry Madison Productions for Aluminum Limited) and *Don't Push Your Luck* (pro-

duced by Harvest Films for the National Society for the Prevention of Blindness). *Incredible Machine*, produced by Owen Murphy Productions for AT&T, also brought home a third prize trophy for the U.S. from Vienna.

Jaroslav Zamtovsky, Minister-Counsellor from the Embassy of the Czechoslovak Republic, officiated at two Grand Prix presentations. The Grenat Grand Prix of the Pardubice Scientific Film Festival in that land also went to *Incredible Machine* and the Grand Prix of the Brno Film Festival was presented to *Quiet Revolution*, produced by Allendor Productions for the STP Division, Studebaker Corporation and the Champion Spark Plug Company.

Awarding the "Golden Ear" of the Berlin Agricultural Film Competition was Karl J. Maes, Second Secretary of the West German Embassy. That high honor was given *The Growing Edge*, produced by Empire Photo-sound, Inc. for International Minerals & Chemical Corp.

A Gold Award, from the London Medical Film Competition, was made by Brian Crowe, First Secretary-Information of the British Embassy. This trophy went to *Cardiac Valve Replacement Using an Improved Prosthesis*, produced by Baylor University's College of Medicine and sponsored by the Cutler Laboratories.

The final top award presented at these

TOP AWARDS—In left photo, Reid H. Ray, CINE president presents Charles Guggenheim the Golden Mercury Statuette for "Monument to the Dream" in competition in Venice as Italian Ambassador Egidio Ortona applauds. In right photo, Sumner Glimcher, producer of "Memento" accepts top category prize and Grand Prix Award of 9th International Industrial Film Festival from Dr. Kurt Krejci, press attache, Embassy of Austria.

sync sound without a blimp: how to spend the day shooting not setting up.

Why is the camera crew so often called an hour before the cast? The lighting is one reason. Another is the time and effort it takes to set up a blimped camera. The NPR weighs 20 pounds and it needs no blimp.

That's the day's first setup. But what about the others? A crab dolly saves you from having to haul the rig yourself, but the angles you can get with it are limited. Taking one on location is a pain in the neck. The NPR gives you sync sound without a blimp — and it needs no AC power. If you want a *really* high angle, you can climb a tree with it in one hand, like a briefcase.

Changing lenses, setting the stop and focusing are all slowed down by a blimp, even if it's a "self-blimp." Changing magazines is even worse. We all know what a disruption that can be. People leave the set; the lights are killed. When the camera — and blimp — are ready, the director has to establish the mood and continuity all over again, poor chap. The NPR's pre-threaded magazine can be changed in five seconds. If you happen to run out in mid scene, it just means another take. Immediately.

With the NPR you get more shot in a day. You also get precise reflex viewing, registration-pin movement, a rotating two-lens turret, a constant-speed motor with sync-pulse generator and automatic clapper, five-second magazine changes and, of course, you get blimp-free silence. You get more shot; and you don't have to get up an hour before the cast. Why not write to us for the new free NPR brochure?

eclair

motion picture cameras since 1909

CINE awards . . .

continued

Diplomats representing their countries at the CINE presentation ceremonies included (l. to r.): Miro Bruner, Yugoslavia; Jaroslav Zantovsky, Czechoslovakia; Brian Crowe, Great Britain; Karl J. Ma Germany; and Dr. Kurt Krejci, Austria.

Sol Wrenn (left), State of Virginia Department of Education and James Thompson, vice president and general manager of NAVA visit during CINE awards festival.

Films were shown that afternoon by Ray Shady, Editor, Kodak Movie News.

Another presentation of CINE films highlighted the 104th Technical Conference of the Society of Motion Picture & Television Engineers, which preceded the CINE Exhibition program at the Washington Hilton in that city.

Role of motion picture

A tradition of this eventful Exhibition Day program is the annual black tie dinner honoring award-winners and special guests of CINE. Guest of Honor and principal speaker at the dinner this year was Bruce Herschensohn, Director, Motion Picture and Television Service of the U. S. Information Agency. Herschensohn's speech brought waves of applause from his audience as he discussed the relationship of youth to the factual film and the role of the documentary motion picture, for good or ill, in bringing its message to peoples everywhere. His words were ably summed up in these closing phrases:

"I feel when the world audience is aware of the importance of the screen and how it can distort or tell the truth, then we'll start to win. As corny as it may sound — truth is on our side — and so are some of the finest filmmakers in the world."

In retrospect, the annual CINE Exhibition mirrors the overseas festival events of this era. Festivals proliferate in Europe: 12 festivals

were held in Italy alone, five of them in Venice. Spain was active with competitions in five of her cities; CINE entered four festivals in France this year; was represented by the First Prize trophy given by the Castillon II International Week of Tourism in Spain to *Discover America*, produced by Reid H. Ray Film Industries and United Air Lines.

CINE submitted 399 prints to the 63 overseas festivals entered on behalf of the U.S. this year, scoring a total of over 150 awards and certificates of participation. At afternoon ceremonies, the organization's president, Reid H. Ray, presented the 163 Golden Eagle and 10 Cine Eagle awards selected for 1968 competition. Mr. Ray also presided at the evening trophy presentation, assisted by CINE presidents Alden H. Livingston, E. I. du Pont de Nemours & Co., and Willis H. Pratt of American Telephone & Telegraph Co. Most of the ceremonies for the busy evening of award giving was Peter Cott, Executive Director of The National Academy of Television Arts and Sciences and a CINE vice-president.

Exhibition Day events also included special morning and afternoon screenings of outstanding U.S. informational films. At screenings held at the National Geographic Society on Friday morning, Dr. Robert Wagner, Professor and Chairman, Dept. of Photography

BANQUET SCENES—Left Photo—Leo Trachtenberg, president of Harvest Films, discusses his much honored film "Don't Push Your Luck" with Bill Terry of American Oil Co., and Lon B. Gregory, editor of Business Screen. Right Photo—Harry McCarthy, Kathleen McCarthy, Arthur Krienke, producer of "Irrigation and the Business of Farming"; Raymond O'Leary, producer of "Early Detection of Oral Cancer"; and O. H. Coelln, CINE vice president and founder of Business Screen.

Cinema. The Ohio State University, introduced a selection of documentary and educational films.

His presentation was followed by an hour-long showing of selected business and industry films, introduced by Ott Coelln, founder of BUSINESS SCREEN and U.S. international jury member at the 9th International Industrial Film Festival in Vienna. Youth Amateur League in West Germany. And behind the Iron Curtain. U.S. films were strongly represented at festivals in Belgrade, Brno, Kranj, Pardubice and Novi Sad.

Latin American participation brought U.S. films to Mexico City and to Buenos Aires, São Paulo and Mar del Plata in South America. This U.S. "Olympic Team" of outstanding educational films travelled to far off Tokyo and to three cities in Australia as well as to Addis Ababa and Tunis on the African continent. Participation included such unfamiliar places as Mamaia, Ustica, Kelibia and Knokke-De Zoute as well as at Israel's competition in Tel Aviv and at Tehran in Iran. U.S. films showed well at Calcutta in India; won a Golden Knight from Malta in the Mediterranean and were honored at Cork, in Ireland.

It is worthy of note that all these carefully-selected U. S. festival entries are competing with the best of the rest of the world at most of these events, including films of the Soviet Union and other Iron Curtain countries.

Taking note of the thousands of factual films created in this country each year and of the comparatively wide range of CINE's participation throughout the field of educational, industrial, scientific, medical, dental, art, music and cultural documentaries, plus the year's best out of television documentaries and selected theatrical short subjects, how does it all come about?

Consider the contrast of the pre-CINE era a dozen years ago, with hundreds of U.S. producers and sponsors submitting entries to such festivals on a direct basis. At festivals such as Edinburgh, for example, this resulted in as many as 100 films coming in for programming. Other hundreds of unsolicited entries piled up in Venice, Brussels, Berlin, etc. Far too many for pre-judging and selection at such events, they were often simply sock-piled or chosen at random with disastrous results.

It was to correct this situation that a representative cross-section of nontheatrical film industry leaders was drawn from production, distribution, manufacturing, users, press and associations to form the early Committee which has since become the well-organized Council on Nontheatrical Events. Subsequently, CINE agreed to help select U.S. television documentary and theatrical short subjects.

Today, a well-manned Washington headquarters is headed by CINE's Managing Director, James H. Culver. Its present 31 directors represent a true cross-section of the entire industry, including presidents of national production and distribution organizations. Its work is supported by voluntary contributions, made through memberships and sustaining and professional patrons. •

A sampling of some of the trophies and prizes presented during the 11th CINE Annual Awards.

The registration area was busy all day as filmmakers and guests checked in for the annual awards banquet and ceremonies.

Visiting during CINE banquet are (l. to r.): Mrs. George Bouwman, George H. Bouwman, producer of "Discovery"; Robert Glatzer, producer of "Friendly Game"; Ann Addison, National Educational Television; Sumner J. Glimcher, producer of "Memento" and head of films at Columbia University Center for Mass Communications; and Mrs. Glimcher.

Plaza Now in New Total Production Center

Ultra-modern 23,000 sq. foot production center is one New England's finest, provides wide range of service.

Complete editing capabilities add to overall production control.

Newest and most modern equipment characterizes extensive sound department.

Fully automated and manual equipment satisfy both large volume and custom still requirements.

An insert and main stage allow many sets to be working and in use at the same time.

Interlock, slide and filmstrip projectors can be run from the console in the screening room.

The results of many months of planning, designing and constructing were realized during the past year as Plaza Productions raised the curtain on its new production facilities.

According to Executive Vice President/General Manager Jim Wille, this expansion has given Plaza one of the finest total communications production centers in the East. Moreover, the company is now able to offer the complete development and production of a full range of communications media programs for agencies, business and industry.

These services include motion pictures, TV and radio commercials and public service spots, videotape, filmstrip and slide presentations, audio services, corporate and employee communications programs, programmed instruction, graphic design services.

Situated in Hartford, Connecticut, the expanded production facility is centrally located to serve New England/New York and the entire country through Hartford's ever-growing international airport. This ability to readily service distant clients is evidenced by the number of programs produced for companies in Chicago, San Francisco and even England.

Those visiting the new 23,000 sq. ft. facility for the first time are particularly impressed by its completeness and the careful attention given to every detail in design and layout.

The 60 x 40 foot main stage and 25 x 22 foot insert stage provide a wide range of large set-up, and table top capabilities for both film and videotape. During one recent production, this vast stage allowed for three sets working at the same time.

Four dressing rooms, makeup room, scene dock and a client's office are located just off the main stage to facilitate production control. A fully equipped kitchen is also maintained to prepare food for use in TV commercials.

The very latest in design and equipment is found in the three studio audio complex where all

recording, transfer and mixing performed. Location and studio recording are done on Nagra and Ampex equipment, with subsequent magnetic transfer on Mnasync recorders. These recorders and the continuous tape loop machines are tied into the mixing console whose custom designed places as many as fourteen different sound sources at the mixer's disposal.

Completing the extensive sound department is the music room containing a full effects library and four stock music libraries. Original scoring is available.

Graphic and fully animated motion pictures and artwork, slides, filmstrips and titles are easily handled on the camera department's Oxberry animation stand. This department also contains an optical printer for duplicating slides and filmstrips. With still motion picture and still photography and the variety of equipment in the department, virtually all photographic assignments can be handled.

Editing rooms, art and production departments and a screening room with interlock projection equipment give Plaza personnel complete control over pre and post-production work as well.

A highlight of the new facility is the ten darkroom color and black and white still laboratories. Both large volume and custom order requirements can be satisfied with the fully automated automatic pump-fed mixing system for continuous flow of fresh chemicals, use of an electric eye device to read negatives and the finest densitometers for accurate color printing attest to the still lab's completeness.

Plaza's modern new center reflects the growing interest of the New England area in effective communications media programs and enhances Plaza's communications' philosophy — "To provide the most effective means of motivating progress for business and industry."

URING THESE PAST ELEVEN YEARS since CINE was born, motion pictures have changed significantly.

More important, perhaps, than the new art, the new forms and new techniques, is the fact that finally the cinema is recognized as a true art. I think the battles of trying to prove that point are over. Film artists are now called film artists. Due to the education of my predecessor, George Stevens, Jr. there is an American Film Institute. Motion picture theaters no longer compete with a carnival or a shooting gallery or a dance hall — now they compete with a museum, an art gallery and a concert hall. Show that CINE deserves a great share of the credit for that.

But for each victory there's always a new conflict. And there is a new conflict. Anyone could have predicted it. No true art form has ever avoided it — and no art form has become involved in it to the extent that motion pictures have. The conflict is international politics. Like it or not, the international screen and the international political arena have become inseparable. That has been true in film festivals, in commercial theaters and now films for television.

One of the criteria used for selecting CINE Award winners is of special significance in the light. The criteria is to present the United States as well as other countries and their people and institutions in a fair and objective manner. Presenting the United States and its people and institutions in a fair and objective manner is also our job at the Motion Picture and Television Service of the United States Information Agency.

And that brings up the logical question — where are we, as a nation, progressing in telling our story to the world? Are we telling the truth and telling it well? Are we winning or losing in the communication of ideas through the international screen?

If I were to judge by the work of CINE and the work of those producers who have won prizes this afternoon and this evening, I could answer — The United States is doing significantly. We are telling our story truthfully and well and with quality.

But as much as I wish CINE were the whole story — it, unfortunately, is not — I feel, in total, we are losing.

I say that not from having any inside information. I say that from simply looking at the world realistically and traveling it and listening to it and watching theater screens and television tubes where films are exhibited around the world. Somewhere along the line there has been a failure to communicate, to tell the world what America is really all about, and what America is really for. It tells the world at large, particularly the young, doesn't know. And as a result of that we have seen a great wave of what we might call a lack of a more descriptive expression, anti-American sentiments and anti-American demonstrations.

There are those who disagree and who ar-

Excerpts from a speech made by Merschensohn, director of motion picture and television services for the United States Information Agency, at the CINE Awards banquet November 15 in Washington.

By BRUCE HERSCHENSOHN*

Answering questions, exploding some myths, and pinpointing the extreme influence of motion picture and TV screens on youth, the USIA Director of Motion Picture & Television Services says, "Yes, but . . ."

gue that it is not at all because of communications or a lack of them, not at all because of the screen or what it says or doesn't say, that there is so much anti-Americanism in the world. They argue that it is because of the policies of our country. They say those policies are internationally unpopular and they cite Vietnam as a number one case. But the problem isn't Vietnam.

Anti-Americanism, particularly among the young, has become a prejudice. A prejudice about Vietnam and about race relations, about poverty and crime and economy and riots and whether President Johnson smiles or doesn't smile, and whether he waves his arms or doesn't wave his arms. And President-Elect Nixon might go through the same thing. The shame is that anti-Americanism is a prejudice as sure as anti-Semitism or prejudice against Negroes. The younger generation around-the-world speaks against prejudice and their cause, which is *right*, is to end all prejudice. Yet, without experience, they have engaged in this new prejudice of anti-Americanism not understanding their own hypocrisy.

How did this prejudice come about? I believe the screen has played an important role and often that role has been played by well-intentioned filmmakers who felt that they were providing a service to "tell it like it is" not knowing that they were "telling it like it isn't."

For anyone who has worked with a motion picture camera knows that a camera can be a liar. There is an expression, "Don't believe everything you read in print." Well, I think this generation agrees with that expression and no longer do you hear people say, "I read it in so-and-so, so it must be true". But since the proliferation of motion pictures and television, that phrase should be changed to "Don't believe everything you see

on the screen." The obvious question is how can a camera lie? And the answer is that a camera which is meagerly equipped with a lens, shutter, and film is only able to capture the visible — but most often what is visible is only a reaction to what is invisible. And all the important aspects of life are invisible: love is invisible, faith is invisible, hate and fear is invisible, restraint is invisible, and even the motivation behind political decisions is largely invisible.

I remember being in Los Angeles when the President of the United States was inside a hotel and a mob outside was getting out of control. It was a fearful time. Later that night I watched the re-play of the events on television, and weeks later I saw a documentary film on it. Cameras were able to capture the policeman's stick in sharp focus but cameras were mechanically unable to record the *potential* threat, the *potential* risk of a mob that might provoke a policeman's stick.

The camera in Vietnam can show a large Caucasian soldier holding a small, pathetic-looking Asian in black pajamas and bare feet but the camera cannot go backwards and show that the pathetic-looking man in black pajamas has just killed women and children intentionally.

American cameras record a riot in a Negro community, yet there is no way for the camera to record that the majority of Negro citizens in that community are not participating in the riot.

And finally, in any battle scene in a motion picture it is impossible to know without a program, who is the aggressor and who is the defender. That decision, unfortunately, is up to the filmmaker.

And so, I think that it is important, particularly for young people to know, that cam-

Continued on next page

are we losing . . .

continued

eras unintentionally and intentionally are capable of the most malicious and harmful lies.

Add to the work of a photographer, a sound track which includes narration and sound effects and music which plays on the emotions of the audience. And add to that the film editor and editing devices and you have the most powerful salesman, the most powerful communicator for good or evil that inventors have ever devised.

Knowing all of this, how much of an influence is the screen? Some still think of it as the Saturday matinee for kids, date-night for the teenagers. But not at all. The means of exhibition have come into every home as well as the theater.

Youth today has almost more experience with the screen than it does with life. In the more developed countries of the world, by the time a young man is eighteen years old he has spent an average of 12,000 hours in school, but 15,500 hours in front of a screen — and that includes television and theaters. Those figures, by the way, do not come from U.S.I.A. but from the Stanford Research Institute. And what do they watch? Am I inferring it's all bad? Of course not. A great deal is excellent. Some of it is the news but as we just mentioned, some of the news is untrue. And one fact that is often ignored is that even the news that *is* true is by its very

name and by its own definition, a *departure* from the truth of normality. The Washington riot of April is news, the normalcy of no riots in Seattle is not news. No headline has ever screamed, "Things are OK!" There is no news story about normalcy.

One more item I'd like to bring up. Although it might seem irrelevant, it isn't. Since the advent of television, youth has been a witness to an almost unnatural awareness of life and of aging and of death, and it has created what we call the "now" generation.

When I was a boy, I remember Carol Lombard was killed in an airplane accident. A few months later her last motion picture was released; it was Ernst Lubitsch's *To Be Or Not To Be* and I remember thinking what horrible taste it was to bring out a film with someone who had just died and I didn't want to see it. And I remember earlier when Tom Mix died, a film was brought out after his death and I didn't want to see it.

But today it is common and it is an every night procedure to watch on television, films with those who have passed away within years, months, days or even hours. It is also common to see James Stewart fifty years old at 8 o'clock and twenty years old at 11 o'clock. I feel this also contributes to a feeling of an urgency about life and an awareness of the aging process and death that the very young might not yet be equipped to cope with.

Add to this the events of the assassination of President Kennedy, Dr. King and Senator Kennedy. All young and important men whose lives were taken in practically every American's living room. There is no way for us to do anything about this but we must be aware that we are facing a generation with experiences we were largely spared from. This is due to access of the screen.

I only wish every student, between graduation from high school and entrance into university, could take a trip around the world. I wish he could go to Berlin, to Moscow to Prague, to Korea and Vietnam, to Latin America, and Africa. And then make his appraisal of what the world is like and what we're doing and why we are committed to freedom and peace. But they can't all take such a trip. And so the international screen must take those travels for them and tell them what the world is like and what we're like.

I hope American motion picture producers will make pictures that tell the truth. All I hope that those who are dedicated to making pictures in the national and international interest, receive the support and finances that it takes.

I realize it's pessimistic to say we're long in the war of ideas. But I do think we're losing. But we haven't lost. And I feel when the world audience is aware of the importance of the screen and how it can distort or tell the truth, then we'll start to win.

As corny as it may sound — Truth is on our side — And so are some of the finest filmmakers in the world.

Modern's 11th Skyport Cinema At New York's JFK Airport

Members of the press and key advertising and public relations executives last month saw how the motion picture medium is now being utilized to entertain and inform air travelers before they leave the ground. The movies are shown throughout the day in an attractive lounge area in the United Air Lines terminal at John F. Kennedy Airport. There is no charge to the waiting passengers. The film showings are sponsored by some of the country's leading companies and trade associations. The lounge is operated by Modern Talking Picture Service of New York.

A wide variety of interesting films including sports, travel, and business shorts, as well as important social documentaries about topical problems such as air pollution, water pollution, littering and crime are shown. A few of the films being shown include *The Enchanting Busch Gardens of Los Angeles* sponsored by Anheuser-Busch; *A Million Lights Shall Glow* from

the Hong Kong Tourist Association; *Sky Country U.S.A.* from United Air Lines and *Energy* from the American Petroleum Institute.

Modern uses rear-screen projection in the lounges so the films may be shown without darkening the area. By using the new General Electric Mark 300 bulb, they are able to project an extremely bright image onto a 45" Polacoat screen. Miss Kathy Burns, G.E.'s "Lady of Light" was on hand at the inaugural to explain the rear screen projection system.

A professional projectionist is on duty at all times to manage the lounge and handle the projection. Two 16mm Kalart Victor projectors are used. While one is showing a film, the other is being threaded with the next program to be seen. By alternating back and forth, there is never a period when the screen is dark. During the showing of a film, a Kodak Carousel slide projector is used to give the name of the sponsor on an adjacent screen.

Ralph Del Coro, eastern sales vice president for Modern commented on Skyport Cinema and the opportunities it provides film sponsors to reach affluent and influential traveling executives. "The operation was initiated four years ago in Cincinnati . . ." Del Coro told the guests, "and based on the favorable reception by the viewing travelers, Modern has expanded the operation to 10 other airports throughout the country." The facility at Kennedy is Modern's 11th Skyport Cinema and the reports from the viewers have been excellent.

Ralph Del Coro, Modern Talking Picture Service executive vice president explains Skyport Cinema at the John F. Kennedy Airport opening.

Audience at the opening of the New York Skyport Cinema watch one of the films shown during the inaugural.

FROM LITTLE REELS of film some mighty motion pictures grow," aptly paraphrases films entered in the Third Annual California Student Film Festival, held at San Juan Elementary School in the historic town of San Juan Capistrano on June 7th.

Going statewide for the first time this year, the festival drew a high-level films from 15 counties that 37 made the final ranks after preliminary screenings. The festival of student-produced 8mm motion pictures is under the co-direction of Pierce E. ("Pat") Patterson, Director of the Orange County (Clif.) Schools Audio-Visual Center, and Richard George of San Juan Capistrano Unified School District. It is jointly sponsored by the Audio-Visual Education Association of California (AVEA) and the California Audio-Visual Education Distributors Association (CAVEDA).

Student-produced films are becoming a permanent part of educational systems," Patterson stated. "It's not a passing fancy. Not only do the youngsters like making these films, but statistics from our few short years of operation prove the activity's benefit in stimulating and motivating our young people into better learning experiences.

All films entered in the annual competition must be student-produced, with a minimum teacher and parental supervision, and must be based on curriculum-oriented subject matter.

This has caused many a student to delve deeper into a sub-area than he normally would," pat added. "We have heard of students doing poorly in reading before entering the student film festival who then advanced two and even three grade levels in capability.

This was due to the necessity of research thoroughly the subject matter of the film," Patterson

students entering the film festival also have the benefit of meeting and talking with prominent producers of commercial films to help judge the event. Winners were also invited to attend CAVEDA dinner meeting, where their films were shown to members — which comprise most of the nation's leading producers and distributors of educational films.

Film entrants were classified by grade level (Elementary, In-

termediate and Secondary) and by whether they were silent or with sound. A first, second and honorable mention award was given in each class. First and second awards are small statuettes of a motion picture camera mounted on a tripod, each suitably engraved.

Also for the first time this year, each school represented by a festival winner received two 8mm film projectors as a gift from Technicolor Corporation, along with numerous educational film loops for the projectors donated by the members of CAVEDA.

Judges who spent the day in San Juan Capistrano screening the finalist films in classrooms which were filled to capacity with student-parent-teacher spectators were: Frank Albitz, AV Section Los Angeles City Schools; Wayne Brown, AV consultant for Los Angeles County Schools; Lenore Eberle of Palos Verdes Peninsula Unified Schools; Les Helhena, owner of Avis Films; Dr. Richard J. Johnson, Chairman of Department of Instructional Media of California State College at Long Beach; Steve Sicard, AV consultant; Bob Neubacher, owner of Neubacher-Vetter Productions; Homer O'Donnell, co-owner of International Education Films; and Dr. John Upton, Professor of Photography and Cinema at Orange Coast College.

They found that some of the films came very close to professional standards in several aspects. A few were of professional quality in at least one phase of the filmmaking art.

Subject matter of the films was as diversified as the people who produced them — running the gamut from an hilarious "Keystone Cops" chase type silent to an extremely sensitive, beautiful story of a young girl faced with the "today" problem of her fiancée in Viet Nam, the mood being aided by music and sound effects tracks recorded separately on tape. And, there were many done in the "classroom educational film" manner.

Production techniques ably tackled by the young producers ranged from simple table-top photography and handwritten titles to elaborate color productions with optical effects and numerous location shots. One film that caught the hearts of all, "An Apache At Acacia", told the story of a young Indian boy (Ronnie Schell) who had left his

Continued on next page

California's Student Film Festival

By ROY L. DEETS

Begun in one small area in 1965, the California Student Film Festival has reached statewide proportions in three short years and is contributing greatly to the film and audiovisual education of young students.

Charles Malcolm and Dave Webb, students at Newport Harbor High School, are pleased to accept the award for second place silent film in the High School class from Al Musso, Past-President of CAVEDA. Malcolm also co-produced the first place winner in this class.

Teacher and film supervisor Mrs. Florence Russell, and Ronnie Schell, young Indian boy star of film "An Apache at Acacia", first prize winner in the elementary sound film division.

Judges Frank Albitz, Homer O'Donnell and Dr. Richard Johnson (l to r) judge a competing film before the watchful eyes of students.

student festival . . .

continued

reservation in Arizona to live with foster parents during school time and attend school in Ventura County, California. Ronnie and his fourth-grade classmates narrated the "first-person" film, which was produced under the supervision of Mrs. Florence Russell, their teacher.

Though still basically a very shy boy, Ronnie sparkled with happiness and pride when he collected his trophy for first place in Elementary-Sound.

The California Student Film Festival really got its start in the Concordia School at San Clemente, California in 1965. But then, it was nothing more than the idea of a reading class teacher

to record some of the skits his students had plotted and written as a reading class assignment. However, the "picture bug" bit, and before anyone knew what was really going to happen, the classes split into several "film crews" and seven skits were captured on 8 millimeter film. The students voted on best efforts and the empty plastic film spools, painted with gold and mounted on wooden blocks, were given as awards.

By the following year, the school systems in that area had become unified and the San Clemente student filmmakers were the nucleus of a movement that started the San Juan annual fes-

tivals. From the one school, and only several grades, it has in three short years expanded to cover all grade levels short of college and covering the entire state.

Winning films in this 1968 Festival were:

Elementary Div., Silent:

First place: *Project Mission*, M. G. Marsh's 4th Grade class, Lexington Elementary School, Pomona Unified School District, Los Angeles County.

Elementary Div., Sound:

First place: *An Apache at Acacia*, Mrs. Russell's 4th grade class, Acacia School, Timber District, Ventura County.

Intermediate Div., Silent:

First place: *Icarus*, Sharp Park photo lab, Sharp Park School, Laguna Salada District, San Mateo County.

Intermediate Div., Sound:

First place: *Mosaic*, 8th grade, Ocean View School, Ocean View District, Ventura County.

Secondary Div., Silent:

First place: *The Case*, Charles Malcolm and Paul Woltz, Newport Harbor High School, Newport-Mesa Unified School District, Orange County.

Secondary Div., Sound:

First place: *Tuesday Is Forever*, Mark Van Matre, Fitch Mountain High School, Healdsburg District, Sonoma County.

Projection equipment was furnished by the Motion Picture and Education Markets Division of Eastman Kodak Company, who also sent along Richard Sullivan and Scott Robertson to insure a professional quality showing of the student films.

"The Beginning"—A Stirring Look at the American Dream

IN THESE DAYS of violent objection and harsh protest, times of questioning, if not public flouting of some of the patriotic tenets of our nation, this film arrives on the scene as a reassuring affirmation of the basic American precepts and philosophies.

The Beginning, an impressionistic history of Massachusetts, has itself had an interesting history. Its producers, Steven Ventilla and John Horvath Zalabery, are escapees from Hungary, and the film seems to benefit from their fresh view of this country's great adventure in democracy. The film abounds in the glories of Americana. Many scenes use no more than the artifacts of early Massachusetts—hand wrought tools and pottery—to evoke the spirit with which earlier Americans carved their nation.

Zalabery and Ventilla were sponsored in the project by Audio Productions with the idea that they would find a progressive, public minded business to support the project and bring it to the attention of the American people. Their faith was justified when William G. Shain, public relations manager for Atlantic Richfield, saw the film and his company purchased the theatrical and TV rights to *The Beginning*. Atlantic Richfield will make the 13½ minute color film available to the widest possible audience of children and civic groups on

a free loan or purchase basis.

The film is unique from several standpoints. For one thing, its story is a mosaic pieced together from seemingly incompatible elements—live action, stills, old prints—in a wildly random scheme that brings everything together in a moving visual sweep down the turnpike of our history. The film's approach, focusing as it does on watershed events and movements significant in the development not only of Massachusetts, but of the nation, makes the utmost use of that state's unique position as a microcosm of American history. Colonists, frontiersmen, Indian-fighters (and makers of peace with the Indians), seekers of religious freedom (and perpetrators of religious persecution), saintly philosophers (and hangers of witches), builders of the first college and the first factories, revolutionists and whale-fishers, Abolitionists and clippership-builders, the story of Massachusetts matches that of the country, step by step.

Totally unexpected is the realization that there is not one live character in the film. Unexpected because the movement never stops, due to a combination of camera movement, lens manipulation and optical trickery. Living presence is evoked from such materials as landscape, scrimshaw and cemetery headstones.

Possibly the most daring aspect

of *The Beginning* is the verse narration—free verse to be sure (you are not conscious of it as poetry unless you look at the script)—but verse nonetheless. This imparts a lyrical, inspiring tone:

"In Massachusetts, the past seems to live on even in the midst of industrial prowess. You look at the complex machines of its factories and you remember those early craftsmen . . . And in the streets of Boston, a great modern city, you are reminded at every turn of the past. Of all American places it is here that

the past speaks most clearly—a quiet and lovely voice that strangely calms the jangle and clamor of the hurrying present."

A spokesman for the National Educational Association has said, "Not only should every school child in the country see this film—they must see it."

Many scenes use no more than the artifacts of early Massachusetts.

"... seekers of religious freedom (and perpetrators of religious persecution . . ." are presented in the film through striking visuals.

The movement never stops, even though there is not a live character in the film.

proudly presents and salutes the most honored business films of 1968 as indicated by their awards and prizes won in festivals and competitions throughout the world. Our listing of the best honored films of the year was arrived at by comparing and combining winners from the festivals listed at the right with the winners of previous international events (the data for which is provided by the Council on International Festivals which entered the films).

For the first time, our comprehensive coverage of festival activity includes the 1968 festi-box score at the right which shows the number of entries in each festival and the number of top awards or prizes. Rounding out our annual total festival coverage issue is a planning guide to 1969 festivals and competitions with complete information about dates, locations and entry requirements which begins on page 23.

American Film Festival Entries: 1000 Blue Ribbon winners: 43	International Film & TV Festival of New York Entries: 2,500 Grand Award winners: 6

SOS PROJECTOLA
 -MAGNIOLA 16MM
 HIGH-SPEED
 EDITING OUTFIT
 MODEL 31 (AU/BU-OPT)
 CAT. #SOS 133-5662

Price **\$814.50**

Complete with viewer, amplifier, speaker,
 precision unitized 2 gear timer/
 synchronizer, decoupler, base and screen

Because of its remarkable utility and
 speed of operation, the PROJECTOLA-MAGNIOLA
 has won instant acceptance with the Industry.

SOS PROJECTOLA-MAGNIOLA

The new SOS PROJECTOLA-MAGNIOLA Editing/Timer, was designed to save precious time in getting news events on the air first. Exceptionally efficient, it permits several people to see the "PROJECTED" picture easily, while it is being quickly edited . . . and so compact it is workable for fast editing between rewinds on the editing table. As the timing synchronizer unit has two Magnetic Heads and one Optical Sound Reading Head, it can take care of film editing for a single system Optical or Magnetic . . . also double system Magnetic.

The second unit of the SOS PROJECTOLA-MAGNIOLA Editing/Timer, is a two-sprocket unitized timing synchronizer. This unit is equipped with built-in magnetic heads to read "Bottom Side" of film. Sprocket teeth are toward operator; optical soundhead on sprocket farthest from operator; special circuit undistorted 2 watt amplifier mixing two tracks simultaneously, built into a special synchronizing base complete, with internal wiring. The normal synchronizer footage counter has been conveniently replaced by an Hours, Minutes, Seconds, timer type counter for direct reading of time . . . eliminating costly, time-consuming conversion of footage into time.

United Boosts New York Image as the "Fun City"

Chatting at the premiere of United's new film by MPO Videotronics are (l. to r.): Arnold Kaiser, president of MPO Videotronics; John Grember, executive producer for United Air Lines; Joy Manhoff, executive coordinator for filmmaking in New York; and William Susman, executive vice president, MPO Videotronics.

United Air Lines is providing visual boost to New York's image by being "Fun City" with its latest travel film, the second in a planned series of five films designed to attract young adults to today's "swinging cities." The 13½ minute color film, titled (believe it or not) *Once Upon a Time a Beautiful Young Girl Flew to New York Town*, *Silver Wings Where She Met Her Wonderful People*, *Had Her Hair Done by Mr. Kenneth*, *Thought Herself a New Wardrobe*, *Met Her Prince Charming in Central Park . . .*, joins *Honolulu*, making use of the latest cinematic techniques in capturing the essence of a United city. "Every technique — lighting, music, film editing, and camera

angles — is designed for the young, mod market," according to John Grember, executive producer for United.

"We've captured the mood and excitement of New York City," Grember said, "whereas the typical travelogue simply talks about them."

The film uses many of the television commercial filming techniques developed by MPO.

It is as far from the standard travelogue as could be. Yet travelogue is what it is. *Once Upon a Time . . .* is a paean to Fun City, and even includes a note of thanks to Mayor John V. Lindsay.

Once Upon a Time, etc. concentrates on people and people oriented places, such as restaur-

ants, boutiques and clubs, and, for example, shows the famous night lights of Broadway from the unusual vantage point of a motorcycle weaving in and out of New York's infamous traffic.

United's new five-film "swinging cities" series will be complete by next spring, with the addition of films on Las Vegas, San Francisco and Los Angeles to those on Honolulu and New York.

The five films, described by Grember as "the most dynamic ever produced by United," will cost in excess of \$300,000.

The New York film was shot entirely on location in the city. Credits include John P. Grember of United and William Susman of MPO as executive producers. Arthur Pembleton directed and photographed. Sam Ornstein edited. James McCartney was producer. Original music by Gino Piserchio. Written by Bill Bernal. The film stars Susan Blakely and Alan Landers. It was produced by MPO Videotronics, Inc.

United's Swinging Cities series will be distributed through Modern Talking Pictures Service, Inc. to theatres, television and travel agencies, civic groups, church clubs and other similar organizations.

Experiment Yields Good Motorcycle Safety Film

The filming of a unique experiment in motorcycle safety has resulted in a dramatic new film, *The Critical Hours*, which emerges as something more than a training film.

The film follows an Explorer through a program that could save the lives of thousands of prospective motorcycle riders in the years to come. The idea evolved when BSA Motorcycle-Western decided to do something to combat the rising number of motorcycle injuries and fatalities.

With the cooperation of the Southern California Automobile Club, Boy Scouts of America and the Los Angeles Police Department, they launched the project. Fourteen youths, all members of Explorer Post 981-X La Mirada, California were the guinea pigs. Only three had ever been on a motorcycle before. Under the watchful eyes of Motor Officers Les Lillywhite and Ed Fitzgerald of the Los Angeles Police Department, they tackled the comprehensive course of training.

The Critical Hours follows the Scouts through their program of study — the classroom instruction, initial rider training, and learning the California Vehicle Code before driving on the public streets. Each fellow progressed at his own pace. When he has achieved sufficient skill he leaves the training area accompanied by an instructor riding tandem. As he developed more proficiency, the instructor accompanied him on a separate machine. Then so-

loing along pylon-marked routes on a specially prepared section of Dodger Stadium.

You attend their graduation exercise at the Police Academy along with Los Angeles Police Chief Reddin, Great Britain's Ambassador Dean and other dignitaries as they give their comments on the program.

Then, a two hundred mile road tour to Lake Arrowhead winding through the mountains exhibiting the youths' driving skill, to spend a fun-filled week end at camp.

"So" . . . the picture concluded — "it is up to you, whether your cycle trips will end in tragedy . . . or with pleasure . . . by the way YOU spend the most critical hours. Look for proper training, or better yet, talk to your local community leaders about assisting you in organizing your own cycle safety program."

The Critical Hours is in sound and color and runs 24 minutes. It was produced for BSA-Western by Trademark Film Productions in Thousand Oaks, California. Prints may be borrowed or purchased from BSA-Western, 2745 E. Huntington Dr., Duarte, Calif. 91010.

Susan Blakely as the girl in United's new film about New York City, swings through the city shopping, buying, seeing, eating and loving.

They're Taking A Giant Step

By **NORMAN SIEGEL**
Vice President
Sunburst Films, Inc.

THE WATTS MANUFACTURING Company, a branch of Aerojet-General Corporation, was begun in 1966 to help reverse the festering unemployment inside the Watts ghetto. A million dollar gamble assembled under the leadership of Aerojet Chairman Dan Kimball, the Watts company began employing hundreds of men and women who had been labeled as "the unemployables."

Young veterans of the film industry in Los Angeles, my brother and I decided to embark upon the uncertain road of independent production by documenting the story of the unique Watts firm. Our sponsor was to be KNBC, the NBC station in Los Angeles, provided we could get cooperation in Watts. They underlined the word *if*.

After setting up several initial meetings for

us, Aerojet left us alone to do our research at the Watts Manufacturing Company. Operation, at first, was not easy to come

The management personnel were friendly and extremely helpful. But the employees on the assembly lines (the company made heavy duty tents for the government) were difficult to talk to. When we learned most of them came from the welfare lines of the streets, and some from prison, we understood why they reacted to us with a mixture of suspicion and animosity.

We returned each day for nearly two weeks before the curtain that kept us from being able to deal openly with the employees began to lift. A seemingly routine general interview proved to be the crucial turning point. A young Negro whom we had unsuccessfully attempted to talk to several times, suddenly said good morning to us. Suddenly other workers who had similarly refused to talk to us now broke their silence.

We knew we had crossed over some of the most visible barrier.

Weeks later as filming began, we expected to encounter difficulties since the entire production takes place inside the factory. We were using employees as principal

LEFT — General Manager Leon Woods discusses company's progress with secretary Judy Bradford (top). Young female employee (center) operates sewing machine. Curtis Thomas and "Billy Soul" (bottom), are employees appearing in "Take A Giant Step."

ers in the film. Another obstacle was that
re most employees work under a piece
system, even the slightest interruption
d cause them to lose money.

oth obstacles were overcome without the
ttest inconvenience because by the time
egan filming all of the employees knew
s and almost automatically anticipated
t we expected them to do. I doubt wheth-
rained actors could have 'performed' as
e.

Human Resources

The film, entitled *Take A Giant Step*,
focuses less on the technical aspects of the
company than on its human resources. Our
story line specifically follows Lester Johnson,
a young black employee. Like thousands of
other ghetto youth, Johnson had partici-
pated in riots and lived to taste the bitter
retribution they caused to his own commu-
nity. His "Black Power" background and
experiences with the police labeled Lester as un-
pleasant to most personnel directors.

The story follows Lester as he goes from
the streets to the employment office at the
company's Manufacturing Company, where he
wins his second chance. It depicts him earn-
ing an honest dollar Monday through Fri-
day and serving out an assault and battery
sentence on weekends.

Lester's advancement is not sensational,
any advancement at all is a giant step
for a young man who, less than six months
ago, was without hope.

At the film's end, Lester is seen having
made the grade in the company — something
not everyone who comes to work there
can do. Perhaps the strongest clue to why
Lester made the grade can be found in one
of his own statements . . . "I feel I'm doing
something constructive, even if its threading
a machine or picking a piece of paper off
the floor . . . I feel I'm helping my peo-
ple . . . and I can dig that."

Take A Giant Step was shown over
ABC's "Survey", a documentary series,
on June 15, 1968. It was enthusiastically re-
ceived by the Los Angeles press.

The film will be distributed to 34 foreign
countries by the United States Information
Agency, and will be shown to hundreds of
American firms through the National Al-
liance of Businessmen, which bought prints
in its nine regional districts.

It is hoped that *Take A Giant Step* will
encourage businessmen to promote other
Manufacturing Companies in dis-
advantaged labor areas. In this way, other Lester
Johnson's will be enabled to take their giant

Foreign distribution

The film is in color and runs 25 minutes
in length. It was produced by Sunburst Films,
Los Angeles. Richard Siegel, producer;
Norman Siegel, writer-director; Fred Kaplan,
executive producer; Mark Friedman, original
script.

Foreign distribution in the U.S. is being handled
by Roundtable Films of Los Angeles. •

Lester Johnson, main character in the film, is shown in jail cell where he serves his sentence for assault and battery on weekends.

This acclaimed dramatic film shows what one company — Aerojet General — is doing to employ the so-called "unemployables" in the strife-torn Watts area of Los Angeles. The Siegel brothers of Sunburst films shot the heart of the matter to "show it like it is."

Sunburst Films crew shooting "Take A Giant Step" includes (l. to r.) Andrew Siegel, Les Rance, Norm Siegel, Fred Kaplan and Richard Siegel.

Production Challenge—Filming Maze of Conveyors in Busy Warehouse

Producing solid sales films of a complex automated conveyor system in a busy warehouse provides some unique technical challenges for Wonderland Studios. Overcome were such obstacles as inaccessible locations, poor lighting and rapidly changing conditions.

This is the packing area of the conveyor system designed by Teeco Automated Systems for the Sears warehouse. A challenging interior to film because of the complex conveyor systems located literally everywhere, thereby cutting the available light.

HOW DO YOU tell a potential customer about your work when one of your proudest examples is an intricate system of custom-engineered conveyors housed in a vast building that is specially designed just for that purpose?

You can't take prospects out to the site for tours — even if that might be geographically feasible — without interfering with a customer's operations.

Nor would still photos tell the story adequately. They would show only static scenes that freeze the action of a dynamic operation. And while blueprints might be meaningful to an engineer, they would just probably bewilder a layman.

This was the problem faced by Teeco Automated Systems, Inc., of Los Angeles. They resolved it by taking the firm's work to potential customers via a professionally produced motion picture.

The subject of the film is the Sears & Roebuck Co. Fashion Center in Los Angeles. The vast, computerized warehouse receives men's, women's and children's ready-to-wear from suppliers all over the United States, then distributes the clothing to some 100 retail outlets throughout the West and in Hawaii.

The interior is filled with a maze of overhead monorail carriers and varying-height belt conveyors, plus storage rails and racks for both garments on hangers and flat goods in tote boxes.

The system moves clothing from the perimeter into the center of the warehouse for temporary storage and then smoothly moves it out. Except when the goods are put on and taken off the system by hand, they are shuttled to predetermined destinations automatically.

To document the operation of the system on film, Teeco selected Wonderland Productions of Hollywood, headed by Martin Bryan. Elected a life fellow of the International Institute of Arts and Letters in 1961 for his creative achievements, Bryan has won awards for his work from, among others, the Association of Industrial Advertisers.

The very nature of the installation presented technical and artistic problems which, while certainly not altogether unique, required care and imagination to surmount.

To begin with, the Fashion Center is a big building. So big, in fact, that the ceiling is high

ough to permit a second Teeco conveyor system to be installed on top of the existing one. This is to take care of any reasonable future need for expansion.

But the height of the ceiling means that the overhead fluorescent lights — the sole source of illumination in the windowless warehouse — provide far less light than that needed for motion picture making.

Consequently, every scene for the Teeco film had to be brilliantly augmented with quartz-halide lamps which were carefully positioned for sharp detail free of shadow.

Changing angles

Each time the angle changed, each time a new shooting position was called for, the lamps had to be respotted. To ensure color fidelity under such difficult conditions, Bryan used only Kodak Ektachrome EF Film, type 7241 (C.I. 160). This is a 16mm film which was reduced to 8mm format before printing. Bryan pointed out that prints made from the larger format film are of better quality.

Cross-country vans bring the clothing into the Fashion Center on hangers and in boxes. After checking and ticketing, hanger goods are put on trolleys which are suspended from an overhead monorail. The flat goods are put on belt-conveyed tote boxes.

Both trolleys and boxes have mechanical triggering devices that can be set so they are automatically shunted off the system to predetermined storage areas. In some respects, the system operates much like an automated railroad yard, the chief difference being that freight cars are switched on one horizontal plane, whereas the Teeco installation operates on multiple levels.

The Fashion Center computer locates the number, colors and

sizes of each item that are to be sent to each retail store. Then human "pickers" go down the storage aisles, filling the orders.

They put hangered ready-to-wear on a conveyor and set the trigger device for the number of the specific store. The same thing is done with the tote boxes for flat goods.

As they move past the off-racks for each store, the hangered goods slide down to their pre-set destination. Here, on the topmost level of the packing area, they remain on racks until the packer is ready to trip a release mechanism that lets them slide down to her working deck. Tote boxes are conveyed to her in similar fashion on an intermediate level just below the hanger racks.

When the packer fills a box, she puts it on another belt conveyor. That carries it around behind and beneath her working deck, and then deposits it on the floor in front of the packing area. There, the boxes for each store are loaded on fork-lift pallets and trucked to the loading dock.

Bryan had to ensure that the script properly amplified what the prospective Teeco customer would be viewing. It had to tell not only what was happening, but how and why.

"This film permits us to display our services anywhere in the country," Teeco President Robert Tangle declared.

"It gives us a solid selling tool that gives the layman a much clearer picture of what we can do for him than any number of blue prints or brochures.

"The film pinpoints details of operation and brings the installation right into the office of the potential client. It not only shows him how our systems work, but it also indicates the quality of our design and installation," he concluded. •

Teeco President Robert Tangle confers with Wonderland Producer Marvin Bryan on details to be emphasized in the conveyor system (above). Camera man (below) focuses on one aspect of the conveyor system that automatically shuttles fashions to points throughout the huge warehouse.

Examining the plans of draftsmen designing the automated conveyor system. Many firms construct buildings from the ground up under Teeco's system.

IFPA JOURNAL

INFORMATION FILM PRODUCERS OF AMERICA, INC.

Ralph Hall Productions Named New IFPA Executive Director

Robert Hecker, National President of IFPA, announced December 1st that the National Board of Directors has retained Ralph Hall Productions, Hollywood, California, to act as executive director of Information Film Producers of America, Inc.

Ralph Hall Productions — which has successfully ram-rodged the last two national conventions — is headed by Ralph M. Hall, who has been active in the physical growth and development of the national IFPA picture since 1957. Jacqueline Stilwell, of Ralph Hall Productions, will continue as National Recording Secretary, by appointment of the Board of Directors.

The primary function of the executive directorship will be to further the aims and goals of IFPA, as specifically outlined by the Board of Directors. Publication of the national NEWSLETTER on an increased scale (size and scope), management of the yearly national conferences, an intensive campaign to recruit new members (and eventually sponsor new chapters in many major cities) and an intensive public information program — these are some of the duties of Ralph Hall Productions toward IFPA. The establishment of regional symposiums for the interchange of programs and outstanding films *between chapters*, is a plan calculated to be invaluable to individual members. More recognition for sustaining members is being planned for the NEWSLETTER. Better communication between members, official "sister" organizations such as SMPTE, etc., and government agencies is expected to be developed in the very near future.

In connection with these long-range plans, Ralph Hall Productions announces the appointment of Maggie Layne to implement the

program and assist in carrying out the wishes of the Board of Directors of IFPA. Maggie — (professional writer, actress, Air Force Reserve Information Officer, and secretary/treasurer to her husband's motion picture production company, Bliss Productions, Inc.,) — met IFPA for the first time at the October Palm Springs Conference, where she acted as special information officer, liaison between IFPA and the USAF, co-sponsors of the event.

Dates for the 1969 conference have already been set — October 16th, 17th and 18th, at the Sheraton-Palace Hotel in San Francisco. Good Luck, RHP!

Herschensohn Elected Chairman of Newly Formed Washington Chapter

The newest chapter of the Information Film Producers of America held its charter meeting at the Sheraton-Park Hotel in Washington, D.C. November 6. Opening remarks by Chairman Pro Tem Lt. Col. J.C. Stokes, chief of the presentation division, Headquarters, USAF, touched upon the historical significance of the meeting. The Washington Chapter provides a larger scope and broader spectrum to government, education, industrial and independent professionalism.

The request for a charter was granted, via letter from National President Robert Hecker, and the following officers were approved by the membership: Bruce Herschensohn, director of motion pictures and television for USIA, chairman; LtCol J.C. Stokes, vice chairman; E. Del Smith, program chairman; James Thompson, secretary-treasurer; Lt. Sims Howell, publicity; and Jay Brubaker, membership.

National Financial Vice President (and President-elect) Michell Rose addressed the membership and presented sustainer plaques to Art Rescher, of Bryon Films and Col. Peter Boyko of Capital Film Laboratories, Inc.

Bob Scott, chairman of IFPA's Board of Governors, spoke briefly on the function of the Board, requesting that the new chapter keep in touch for interchange of ideas and suggestions. National Recording Secretary Jackie Stilwell was present to record the proceedings.

During a general discussion, James Etheredge stressed two important qualifications for membership — common interests and an active interest in A-V communications. Anything less would result in less general activity — which could defeat the general aims and goals.

Northern California Chapter Sees Underwater Filming Presentation

The Northern California Chapter of IFPA did it again — another outstanding program, this time featuring Ernie Brooks and Mal Wolfe of the world famous Brooks Institute of Photography at Santa Barbara. The audience of 75 included IFPA members from Hollister in the south, to Sacramento in the north, as well as local SCUBA enthusiasts and our brethren from SMPTE. The evening began with cocktails at 6:30, dinner at 7:00 and the meeting at about 8:45 — all at the Senator Hotel in downtown Sacramento.

Supported by film clips, colored slides and various special underwater gear, Ernie Brooks and Mal Wolfe showed the group how to all LIGHTS! CAMERA! ACTION! in an environment completely foreign to many of those present. They covered the varied problems of lighting and color . . . saw examples of under-water experiments using infra-red, ultra-violet light, and fulorescent paints. We even saw the problems created by underwater lights reflecting back from plankton in the water, sometimes so thick you couldn't see more than five feet in front of the lens. Ernie and Mal discussed the lens problems, the special corrections that must be made, and how to shoot in close with wide-angle, multi-camera set-ups — and still keep the other cameramen out of the picture.

Many members were interested in the answer to the big question: "Where do you get candidates for underwater camera crew?" As a leader in this field, Brooks' experience shows there are two sources for underwater teams — trained cinema people with diving experience — and trained divers with NO cinema experience. Brooks has tried both ways in training aquanauts for the Lab Programs. The group learned that it is easier to re-train an experienced diver on camera work than to make a trained diver out of an experienced cameraman. However, both sources of men have been used with good, over-all results.

The windup came with demonstration of the latest in automatic underwater camera with zero gravity, special lights used by aquanauts, and a newly devised helmet worn by the underwater camera crews. An informal question and answer period continued for a considerable time while coffee was served.

The protector projector.

You've got an investment in time, effort, and dollars in every movie you make. We built the Kodak Pageant Sound Projector to protect that investment.

It protects the film with features like shock-absorbing sprockets, a soft tension gate, and mechanically reversible sound drum. In fact, no stationary part of the projector ever touches the picture or sound track areas of your film. All these things reduce film damage, and that's especially important when you project "one-of-a-kind" camera originals.

And the Pageant Projector makes the best of impressions on your audience. The picture and the solid-state sound system go on instantly. The sound is clean without hiss and crackle. No fuzzy not-quite-perfect sound either, because of the unique sound fidelity lever that lets you focus the sound light directly on the track whether the emulsion is facing the lens or lamphouse. The speaker is a quality instrument built into a detachable projector cover. A 40-foot speaker cord lets you put the sound up front where it belongs.

All in all, for film protection and film projection, you need a Kodak Pageant Sound Projector. See your Kodak Audiovisual Dealer or contact one of the offices listed below.

IFPA Elects National Officers for 1969

With the balloting now complete, the Information Film Producers of America has selected its 1969 slate of national officers to lead the group through the coming year. The new officers will be officially installed in January at the meeting of the Los Angeles Chapter.

The 1969 President is Mitchell Rose, motion picture producer for USAF DET. 4, 1352nd Photographic Group in Inglewood.

Edward J. Carroll has been elected executive vice president. Ed is motion picture supervisor of the Southern Pacific Railroad Safety Dept. in San Francisco.

Fred Beelby has been reelected editorial vice president. He is motion picture producer/writer for USAF DET. 4 in Inglewood.

The new Chapters Vice President in the West is Robert McGue. He is chief of motion picture, TV production for General Dynamics/Convair.

Art Rescher, sales representative for Byron Film Laboratories is the chapters and membership vice president in the East.

And, Jackie Stilwell was appointed IFPA National Secretary by vote of the Board of Directors.

Vidtronics Hosts LA December Meeting

On December 19th, Vidtronics Division of Technicolor hosted the L.A. IFPA Chapter members at MPO Studios. Joe Bluth, vice president and general manager of Vidtronics, explained and demonstrated through closed circuit monitors, Vidtronics' remote process of transferring video tape to work print film and synchronized magnetic sound tracks. The film can then be edited, picture and sound, and transferred back to video tape in edited form.

The January 31st meeting of the L.A. Chapter will coincide with the installation of the new IFPA national officers, grateful thanks to the outgoing ones, and a fantastic film presentation of the tribulations, traumas and triumphs of the Bob Hope Christmas tour in Viet-Nam, by a man who really knows — our good friend Alan Stensvold, one of Hollywood's top cameramen. Meeting will take place at Dublin's Irish 'n' Fun spot.

control

**EXPOSURE
DEPTH-OF-FIELD
IMAGE SHARPNESS**

It's easy with the Arriflex 35 2 CV's variable shutter. Clearly marked in 15° increments . . . get the exact opening you need, anywhere between 165° and 0°. Add to this the bright-as-life Arriflex mirror-shutter reflex viewing system . . . The camera's compact, go-anywhere design . . . and its line of accessories that let it build from a 200-ft. hand camera to a complete blimped studio system. Arriflex 352CV—the camera that gives you more control—

more exposure control

Lenses give their finest images at certain apertures. Maintain these apertures by adjusting exposure with the variable shutter instead of the diaphragm. The variable shutter can also eliminate the need for ND filters and the optical deterioration they create.

more depth-of-field control

A 'busy' background can ruin an otherwise good shot. Wash it out—close down the shutter and open the lens to reduce depth-of-field—the background stays in its place: the background.

more sharpness control

Fast-moving subjects may speed by too quickly to register at the wide-open shutter speed of 1/48 sec. So close down the shutter—just enough to 'freeze' the action in each frame and get sharper pictures on the screen.

Harvest Films Completes, Releases Cancer Care Film

Harvest Films, Inc. has completed and released a new film for Cancer Care, Inc.

A Special Kind of Care is a dramatic film showing how one family was helped by Cancer Care when a member was struck by cancer. It shows the many ways in which Cancer Care works to keep families stable and together despite the stresses caused by advanced cancer.

The film was produced and directed by Leo Trachtenberg. It is a 16mm color film, running 13½ minutes, and is cleared for TV. Screening prints are available through Harvest Films, Inc., 11 West 42nd Street, New York, N. Y. 10036.

"The Hangup" Shown Publicly by Air Force

The Hangup, a film recently completed for the U.S. Air Force, is now being screened throughout the nation via theatre and television. Originally slated for internal use only, *The Hangup* was so well received by the Pentagon that it has been reclassified and made available to the public. It is concerned with the use of hallucinogenic drugs, amphetamines and barbiturates in the military. Thomas Craven Film Corporation, New York, produced.

"The Travel Door" — of Agents Moving Faster

The world convention of the American Society of Travel Agents in San Juan recently witnessed the premiere of a motion picture that mirrors its members.

Sponsored by Delta Air Lines, *The Travel Door* is a 28-minute film in 16mm sound/color designed with one purpose in mind — to describe the multi-faceted role of dedicated travel agents who are "forever moving faster than their clients in the world of

travel." Lee Sport, Delta's Agency and Vacation Sales Manager, points out, however, that it is also a travel film, with tantalizing glimpses of several recognizable vacation areas.

The film follows the adventures of three travel agents involved with the varied needs of their clients. To accomplish this, camera crews and actors traveled across Delta's system, which includes 60 cities in a route network extending coast to coast,

border to border, and into the Caribbean.

Four-second scenes like that of a race car spinning out in front of the camera took a half day to set up.

Richard Bradley, NBC network personality, stars as travel agent Ralph Melton. Doug Mayes appears as Murray Resnor, and Patricia Borgen is Roberta Lind-say.

The producer, Walter J. Klein Company of Charlotte, com-

missioned Loonis McGlohon to compose an original musical score for "The Travel Door." The score includes eight different themes. One of them — a psychedelic scene — lasts only ten seconds.

The motion picture title refers to the doors to world travel that travel agents are continually opening for their customers. Viewers get an eyeful of travel in the film's 28 minutes. Locations include Old Town in San Gatos, California; splashy casinos in downtown Las Vegas; the Streetcar named Desire in New Orleans; exotic Dunn's River Falls in Jamaica; a boat moving through the Florida Everglades; O'Hare terminal in Chicago; Knott's Berry Farm; and Anaheim.

According to Sport, "The Travel Door" will be shown to television audiences, civic clubs, travel groups, and other public audiences for at least three years.

He reported that production of the motion picture went according to plan except in one aspect. The script called for the film to open on a travel agent walking in cold misery through a blinding snowstorm. The producer set this up for Chicago in mid-winter and waited for the weather bureau to give the red. It never came. Chicago was snowless. But the intrepid camera crew got their snowstorm a mile from their studios — in Charlotte, N. C., in the sunny South.

Meal Planning Subject Latest Kellock Film

Identifying and showing the homemaker in one of her most important roles, *A Woman's Place* describes the importance of planning nutritious family meals centered around a main national dish.

**THIS
FEATURE-FILLED
MIXER/REMOTE
AMPLIFIER
HAS AN
UNEXPECTED*
PRICE TAG**

*Unexpected? Judge for yourself: the Shure M67 Professional Mixer/Remote Amplifier has virtually every important feature asked for by broadcasting and recording studios and sound installers. It can be used as a complete, compact console for studio, remote, or original installation use—or as an "add-on" mixer for expanding existing facilities and providing additional microphone inputs with tape recorders and VTR's.

It features 600 ohm line and microphone level outputs; an illuminated VU meter calibrated for +4 and +10 dbm; four low impedance microphone inputs, each with individual low-frequency filter inputs—plus one input convertible for line bridging, or 600 ohms; built-in tone oscillator to provide calibration signal to set signal levels; extremely low noise

and RF susceptibility (noise level -126dbv); female Cannon connectors, two-level headphone monitor jack and many other features.

Its distortion level is UNDER 1% from 20 to 20k Hz at +10 dbm out! Clipping level is +18 dbm. It also features a unique noiseless automatic switchover to battery if the AC line fails. (Battery pack optional.)

It is not much larger than two cartons of cigarettes (11 3/8" x 7 1/2" x 2 1/2") and weighs just 4 lbs. 4 oz.

Incredibly, this truly professional, compact, complete mixer/remote amplifier has a professional net price of only \$147.00!

Livestock and Meat Board by Kellock Productions, the 20 minute color film defines the position of meat as the foundation for most meals. The film outlines the six basic methods of meat cookery, the proper and effective use of temperature control and underscores properly planned and prepared meals from a nutrition standpoint.

Additional information may be obtained from the National Livestock and Meat Board, 30 South Wabash Ave., Chicago, Ill. 60603.

Causes, Prevention of Juvenile Delinquency

A film on causes and prevention of juvenile delinquency from the viewpoint of troubled boys and girls is being distributed by The Sears-Roebuck Foundation.

In-depth interviews with young people and a statement by F. Lee Bailey, criminal lawyer, also are included in the film.

Narrated by Joe Garagiola, radio and television broadcaster, *The Invisible Child*, was produced by the Ohio Youth Commission and Taft Broadcasting Company under a grant from The Sears-Roebuck Foundation.

The film is recommended for parents, high school seniors, college students, and church and civic groups, as well as public and private agencies or local govern-

ments. It is available on a free-loan basis from The Sears-Roebuck Foundation, 7435 Skokie Blvd., Skokie, Ill. 60076.

Navy Zero Defects Films Aims to Stop Errors

The first documentary film produced on the U.S. Navy's Zero Defects Program, *Sauce for the Gander*, was previewed by an audience of 300 top military and civilian personnel at its October 30 premiere in San Diego, California.

Emphasizing excellence in craftsmanship at all levels, the ZD Program appeals to the individual to prevent errors through personal pride in his job. The program awards citations to staffs which have reached goals set to eliminate errors.

Shot primarily at the Naval Air Rework Facility in San Diego and at the Portsmouth, New Hampshire Naval Ship Yard, the twenty-two minute color film will be shown to all Naval installations, to all other defense establishments, for public relations purposes and to private contractors.

Charlie, the main character in the film, expects perfection for all other Naval personnel, but himself. He steps back to take a good look at his own behavior and discovers that it is possible to strive for perfection. The film

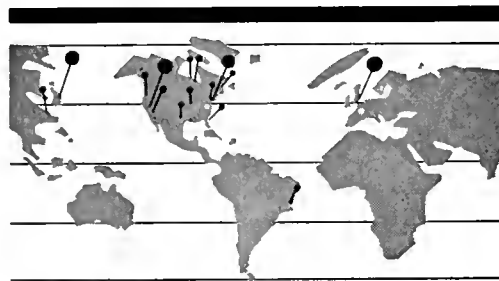

Charlie, the main character "Sauce for the Gander", blames secretary for losing one of the engines.

includes scenes from his boyhood home life and professional career.

Joseph Dunford, president of Pelican Films, which produced the film coordinated the production with the U.S. Navy, with following credits: director, McKean; producer, Richard Carter; technical advisor, Frank Curhan; cameramen, Dick France and Urban Santone; screenwriter, Cliff Peacock; and editor, Harry Chang.

The Navy Zero Defects symposium took place October 29 through October 31 at the Grand Motor Hotel in San Diego. Admiral I. J. Galantin, Chief of Naval Material, delivered the keynote address. Workshops were conducted on the program as well as the presentation of Industrial, Naval and other Department of Defense exhibits.

Offers Laminated Magnetic Sound Tracks

Utilizing advanced laminating techniques, a choice of two magnetic tracks are being offered to the motion picture industry which provide improved frequency response, low wow and flutter and extremely low profiles.

The "professional" track utilizes instrument grade tape which is cone lubricated to full oxide. The surface is extremely smooth and flat minimizing surface noise. Dynamic quality is such that recordings can be made at higher amplitudes without distortion. Playback will render better response in lows below 50 Hz and highs above 5,000 Hz. Maximum height of this track is 1/2 mil (.0005). No balance is ever needed.

The "Plus 4" track features the

Maximum height of the track is 1/2 mil (.0005).

same flat smooth surface with a lower profile of .0002" to .00025". Dynamic quality is 15% lower than the professional

track but is greater than currently available tracks.

Service is available for laminating Super 8, Regular 8 and 16mm films. Further information is available from Zyco Magnetic Tracks, P. O. Box 243, Cornwells Heights, Pennsylvania 19020.

Lens Support Prevents Wear on Lens Mount

Birns & Sawyer has introduced a lens support to prevent unnecessary wear of lens mount and to ensure good lens seating for sharper focus.

The B & S accessory holds the Angenieux 12-120 zoom lens, in true, non-distorted zoom. Since it's designed to support the Angenieux zoom lens, a special shoe is available to hold the zoom arm support on the Auricon Cine

Voice, Pro 600 Auricon, Mitchell 16, Milliken, closed-circuit television cameras and others. For additional information, write Birns & Sawyer, Inc., 6424 Santa Monica Boulevard, Hollywood, California 90038.

Kalart Offers New 16mm TV Film Chain System

The Kalart Company, Inc. has introduced a portable 16mm TV uniplex film chain system, Model STV-TV-A. Compact and easy to operate, the system can show 16mm sound films at one or more remote locations by means of closed circuit television and can also be used to record 16mm film on videotape for storage and future replay. The complete unit features a special 16mm sound film projector adapted for TV

Folding Portable Easel Lightweight, Easy to Carry

The Oravisual Company has introduced a new J-157 all purpose portable easel. The easel is easy to carry; it folds up to 19½" x 29½", weighs 9 lbs., and has a built-in carrying handle. All necessary presentation materials can be carried on the easel, ready for instant use: paper pad, pad clamp, chart shelf, and storage drawer.

The J-157 can be used as a table model (with its legs folded up) or as a floor model. The easel also has extension legs which permit its use at any of 4 different floor heights; for 50" high up to 70" high for maximum audience visibility.

The J-157 easel is designed primarily for executives in sales, advertising, engineering, service and training who do a great deal of traveling both in and out of town. For further information, write Oravisual Company, Department R-11, Box 11150, St. Petersburg, Florida 33733.

Spindler Sauppe Introduce Hand-Held Remote Control

A hand-held remote control unit designed for Selectroslide 2 x 2 slide projectors has been introduced by Spindler & Sauppe, Inc. The remote controller, Model 737, provides forward slide change, reverse slide change, and operation of a Spindler & Sauppe Model 715 focus control. All functions are actuated by two rocker switches. When used with manual Selectroslide Model SLM projector, the control actuates the command lights which signal the operator. For additional information, write Spindler & Sauppe, Inc., 1329 Grand Central Ave., Glendale, Calif. 91201.

Automatic Iris Lenses Produce Good Exposures

Agenieux Corporation of America has introduced a series of motion picture lenses of special interest to the television news and industrial fields. The 6x 12.5BDA (12.5-75mm f/2.2), 10x9.5BDA (9.5-95mm f/2.2) and the 10x12BDA (12-120mm f/2.2) will be available with Automatic Iris for most 16mm reflex motion picture cameras. Light passing through the entire lens is metered by a CdS cell. The response is amplified by

The Automatic Iris helps the professional cinematographer create a film of superior quality with less than normal effort.

transistors and sent to a controlling device which in turn opens or closes the diaphragm. The adjustable control will accommodate all film emulsions within a range of ASA 10 through 400. Exposure times of 1/5 through 1/160 second can be applied.

The cinematographer can, with the Automatic Iris, obtain correct exposure in hostile environments or beyond his reach or when lighting changes while filming. More information may be obtained from Angenieux Corporation of America, Inc., 440 Merrick Road, Oceanside, New York 11572.

Facsimile Fonts Offer Title Lettering Source

Users of the Photo Typositor for preparation of title cards and similar work have a new source of letter-styles in Facsimile Fonts, distributed exclusively by Los Angeles Type Founders, Inc. These give users the largest selection of alphabets available anywhere. Many hundreds of letter-designs which previously could not be obtained in either film or metal form now are available from this source.

Facsimile Fonts also will produce exclusive faces from a customer's own artwork, and protect it from use by anyone else, and will create and produce original alphabet designs to order.

Production controls are rigid and the finished product is

checked by optical comparison to assure quality exceeding usual industry standards.

Photo paper, and both dry and mixed chemicals also are supplied by the distributor of Losimile Fonts.

For additional information, write Los Angeles Type Founders, Inc., 225 East Pico Boulevard, Los Angeles, California 90015.

Allied Impex Offers Four Bauer Projectors

Four new 16mm Bauer sound projectors with pushbutton operation are offered by Allied Impex Corporation. Optical sound only or optical and magnetic sound projectors are available with Xenon Lamphouses for 800 or 1600 watt lamps. Stancro with each of the four models of the Selection II O line is a precision projector mechanism with "Geneva" Maltese-cross movement immersed in circulating oil bath, and non-asynchronous drive motor, single phase 110V

The Bauer Selecon II O 16mm sound projector is available in four models.

60 cycle motor for 24 fps. standard are 5000' capacity reels, tilting platform, projector column with built-in pushbutton controls, elapsed time meter and built-in transistorized pre-amplifier.

for optical and magnetic d.

The Xenon Lamphouse has a 4-in cold light mirror, auxiliary front mirror and ignition and is provided with an anti-interference device. Lenses for projectors are offered from 25mm to 75mm. There are also Moeller Anamorphic Lens 2X for 35mm and 50mm lenses, and a Moeller Anamorphic Lens 46/2X for 65mm and 75mm. Additional information can be obtained from Allied Imaging Corporation, 300 Park Avenue South, New York, New York 10010.

The 990 accommodates all conventional 2x2 inch slides in trays of almost all manufacturers, including the company's own 100-slide tray.

when to focus manually for badly warped slides.

For more information, contact Atlas-Rand Corporation, 2 Keystone Place, Paramus, New Jersey 07652.

Mole-Richardson Offers Litewate Brute Molarc

Rated at 225 amperes, 115 to 120 volts D.C., yet weighing only 137 pounds, the new Litewate Brute Molarc, Type 4601 duplicates the performance and light output of the Type 450 Brute.

The Litewate Brute features a tilt-out carbon feed mechanism, opening from the rear, for easy re-carboning without disturbing the lamp orientation. The entire mechanism is easily removable for servicing. The housing is all aluminum construction with hinged clean-out panels on the bottom trough. A light-trap louvered vent is provided in the top for ventilation.

All controls are mounted on the rear for easy access by the operator. No carbon position adjustments are required to re-strike the arc. A new Mole-Richardson designed, heavy duty, quick-break switch with male pin plugs is provided. The focusing crank adjusts beam divergence from 12 to 48. Control knobs are provided for manual positioning of the positive and negative carbons.

For further information, contact Mole-Richardson Company, 937 North Sycamore Avenue, Hollywood, California 90038.

2-5 KW Spotlights for Production Application

Bardwell & McAlister, Inc. has developed new 2KW and 5KW indirect softlights for film and television production use, using tungsten halogen quartz lamps. For additional information, write John L. Murray, Bardwell & McAlister, Inc., 1117 N. McCadden Pl., Hollywood, California 90038.

shock resistant container specifically designed to hold one Technicolor film cartridge keeps it safe in shipping or storing. The Plio-Magic features an easy to operate locking system which provides a sure grip without straps or buckles. For information from Plastic Corporation of America, 640 Commercial Avenue, Carlstadt, New Jersey 07072.

Atlas-Rand Projector Focuses Automatically

The Keystone Targetronic 990, autofocus projector with a 45mm range finder, has been introduced by the Atlas-Rand Corporation, a division of Berkeley Corporation, Inc. This projector makes it possible to establish perfect focus even before projecting the slide and then assures that subsequent slides will be sharply focused even if slightly tilted or improperly mounted.

The unit has a Bausch & Lomb optical system, three separate fans providing cooling, cycling focusing, and a metal die cast construction with walnut trim. Other features include a solid-state remote control timer and an autofocus meter which advises

industry news

Along the film/tape production line

Ingenuics Formed to Sell Fairchild-Hiller Products

The formation of a new aerospace "spin-off" firm to manufacture and market commercially more than two dozen optical and photographic products developed originally by a division of Fairchild Hiller Corporation was announced recently.

The company, Ingenuics, Inc., announced simultaneously that it had purchased from Fairchild Hiller Corp. "substantially all of the assets" produced during the past two years by the Advanced Optronics Laboratory of Fairchild.

Included in the portfolio of purchased products, representing future sales estimated at "many millions of dollars," are the exclusive rights to the synthetic stereo 3D movie system developed by Fairchild Hiller in all fields except "industrial show" and motion picture theater markets. These rights include home movies, educational, scientific and military markets for the new system which permits any movie ever made to be projected for 3D stereo viewing.

An 8mm projection system is currently on display in Ingenuics' "Show and Tell" room.

Ingenuics has received a contract from Fairchild Hiller to provide consulting services on the stereo 3D system which won a gold medal when shown publicly for the first time on October 16 during the International Film and TV Festival at the Americana Hotel in New York.

The firm was able to purchase the products and systems . . . ranging from advanced prototype equipment to simple demonstration models . . . due to the "lack of a commercial product environment" at Fairchild Hiller's Space and Electronic Systems Division and also "their reluctance to start one during a lean year".

In addition to the 3D synthetic stereo movie system, Ingenuics listed several of the other prod-

ucts of the purchased assets:

1. Cobra System of Coil Film Processing — a high quality method for rapidly processing rolls of photographic film.
2. "Flicka" Comparator — a device which enhances the visual differences between two objects which are supposedly the same.
3. Optical Contrast Booster — a technique for improving contrast of the projected image appears on the ground glass of rear screen projectors, such as microfilm viewers.
4. 3D X-Ray — a relatively straight forward device has been developed which permits small parts to be conveniently X-rayed and viewed in three dimensions.

The corporation has initially contracted for 1,500 square feet in Gaithersburg including office, "show and tell" prototype and assembly area space.

Sandrof Awarded for Oceanography Films

Samuel Sandrof, executive motion picture producer for the Oceanographer of the Navy, has received the Navy's second highest civilian award, the Superior Civilian Service Award, in recognition of the outstanding Navy-wide oceanography film program which he established and directs.

In a recent ceremony, the high award was presented to Sandrof by Rear Admiral O. D. Waters, Jr., Oceanographer of the Navy. . . . for superior civilian service which has been of exceptional value and great benefit to the Navy."

Many of his educational, scientific, and public information documentary films have received world-wide festival honors and awards, including the Edinburgh, Venice, San Francisco, American, and Columbus Film Festivals. One of his recent films,

Samuel Sandrof receives the Superior Civilian Award from Rear Admiral O. D. Waters, Jr., Oceanographer of the Navy.

Mission Oceanography, traces the history of oceanography from the whaling days of the 1840's down to the present. It has won recognition from nine film festivals to qualify as one of the most honored films produced by the Navy in 10 years.

His films are a substantial part of the Oceanographer's public affairs program, which recently received the Silver Anvil Award from the Public Relations Society of America as one of the country's outstanding information programs of 1967.

Sandrof has been in charge of the Navy's oceanography program, since its inception 10 years ago. He entered Government service in the Navy's motion picture program in 1951; his career in the film industry goes back to 1938.

The Navy's oceanography films are available on free loan to the public from the nearest District public affairs office.

International Audio Visual Incorporates in Seattle

To facilitate services to its growing dealership organization which now extends into 15 areas of the U.S.A., International Audio Visual has incorporated in Seattle. Until now, International Audio Visual, which since

seen importing 16 mm sound projectors and allied equipment to Japan for distribution in North America, has handled all business from its Canadian office in New Westminster, British Columbia. Shipments to U.S. orders were made from Seattle, and orders, invoicing and all accounting were handled in the Canadian offices.

President Peter Allinger states that International Audio Visual projectors are now being used by an increasing number of leading industrial and commercial concerns in the U.S.A.

Appointed General Manager of International Audio Visual in Seattle, is Bob Gaskins, formerly sales manager for Richmond Manufacturing Co., Van Nuys, California. Gaskins was an Audio-Visual dealer in Wichita, Kansas.

Cinema Beaulieu Opens National Headquarters

Cinema Beaulieu, Inc., has completed a new and ultra-modern headquarters facility located at 225 Ventura Boulevard in Van Nuys, California — a location convenient to all major Los Angeles freeways. The new phone listings are: (213) 2395 and 872-2860.

Cinema Beaulieu's new 10,000 square foot multi-storied headquarters building, which began operations November 18, 1966, was specially designed to provide improved customer service. Accounting and order-processing have been completely automated. The Technical Service Department, equipped with up-to-date electronic instruments and providing rigorous quality control procedures, has been greatly expanded to speed repairs. Warehousing and shipping facilities have been enlarged to provide the efficient handling of customer's orders.

Cinema Beaulieu, Inc. is the exclusive United States distributor of Beaulieu 16mm and Super 8 motion picture cameras and

Heurtier 8mm and 16mm projectors.

In addition to its west coast headquarters operation, Cinema Beaulieu also maintains an east coast showroom and service center in New York City.

Acme Using Network-Like Isolated Switching System

Acme Film & Videotape Laboratories has completed the installation of a network-type "isolated switching system."

The system provides complete and rapid switching ability at each videotape recording machine, remote locations, and in the control room. It eliminates "patching" to distribute the sig-

Acme Film & Videotape Laboratories' Chief of Engineering Maintenance Curt Thielemann in front of the video distribution amplifier and the 360 switcher relays in the "isolation switching system".

nals and increases signal-to-noise ratio.

The entire system utilizes the latest electronic switches, relays, and integrated circuitry.

It is a relay cross-circuit switching system that includes 360 four-double-contact-relays. Each is capable of interconnecting each signal source to every other one in the plant. More than one mile of 50-wire multi-conductor cable was used.

The system is similar to those used by the major networks. It originated with Marconi and the BBC in England — was devel-

oped further at Canada's CBC — improved even more at NBC in this country.

According to Curt Thielemann, chief of engineering maintenance, the new installation used 6500 feet of color coax cable and 7200 feet of audio cable . . . and will improve the transmission of color signals in Acme's Videotape Laboratory. The distribution amplifiers for audio and video were redesigned for even truer reproduction of both sound and color.

A unique feature of the system is a "lock-out system" that gives the laboratory a capability of providing private viewing of audio alone . . . video alone . . . or special routing of any signals. "Recent growth of Acme's Videotape Laboratory made this elaborate system necessary — and we now look forward to higher quality and faster production activity," Thielemann said.

He estimated that the system cost approximately \$50,000 to install and took a full year. It was designed so that additional equipment and facilities can be easily added.

U.S. Industrial Film Festival Plans 2nd Year

J. W. (Wil) Anderson has been named chairman of the U.S. Industrial Film Festival for the annual event to be held on April 24, 1969. Wil Anderson, an ad-

visor to other film festival member of the Chicago Council and a member of the board of Chicago Unlimited, guided the U.S. Industrial Festival to a highly successful season earlier this year. The event attracted entries from nations with winning films. Producers in the United States, Canada and England.

Commenting on the second annual event, Wil Anderson said, "We have established this festival as a leading international event providing producers and sponsors an opportunity to showcase their 16mm motion picture productions and 35mm films. Business minded producers of these industrial films have responded by their response that they want a festival not cluttered with entertainment or experimental films.

Entry blanks will be ready in December and must be returned to the U.S. Industrial Film Festival, 333 N. Michigan Ave., Chicago, Illinois 60601, U.S.A. by March 1, 1969. Awards will be presented at the Palmer Hotel in Chicago, April 24, 1969. Entries are \$40.00 for 16mm motion pictures and \$25.00 for 35mm film strips and are in demand throughout the world from producers, sponsors or distributors of commercially produced films and from university, government and in-plant producers.

Carlisle Productions Moves Chicago Office

Robert Carlisle Productions, producers of advertising, documentary, educational and feature films, has moved to 908 N. Ernst Ct., Chicago.

Carlisle has leased the entire third floor of the building for use as studios and offices. With headquarters and feature studios in California, Carlisle maintains editing, finishing and some production facilities in Chicago.

Wolper Opens Division to Produce Educational Films

Wolper Productions has established a new division to produce educational films.

Heading the Educational Film Division is Larry Savadove, who has terminated an eight-year association with McCann-Erickson,

Inc. to accept the post. Savadove served five years as creative director and vice president of McCann-Erickson in Japan and Asia and three in the Caribbean.

Savadove will headquarter at Wolper Productions in Hollywood and will work under the supervision of Alan Landsburg, Wolper executive vice president.

CFI's Goetz Promoted to Army Reserve Colonel

Jack M. Goetz, director of public relations at Consolidated Film Industries, has been promoted to the rank of full Colonel in the U. S. Army Reserve. With the promotion, he has been given a new mobilization designation assignment on the Army Staff at the Pentagon as Chief, Audio-Visual Section, Public Informa-

Pinning on Goetz' new Colonel's "Eagles" are (left) Col. James H. Stell, senior U. S. Army advisor for the Southern California area, and (right) Col. Phillip C. Wikoff, commander of the 301st Civil Affairs Group, headquartered in West Los Angeles.

tion Division, Office, Chief of Information, Department of the Army.

Goetz also commands the 6325th Information Unit (RTU), located in West Los Angeles, California.

Klein Co. to Produce Atomic Recruiting Film

The U.S. Atomic Energy Commission has commissioned Walter J. Klein, Ltd., of Charlotte, N.C. to produce a new nuclear recruitment film.

My Middle Name Is Atomic be designed to attract young people to careers in nuclear science at many levels in industry and government.

Two of America's largest power companies are co-sponsoring the motion picture — Consolidated Edison Company, of New York, and Pacific Gas and Electric Company, of San Francisco.

Tony the Tiger is greeted by Rita Powers, president of Pinnac Productions, at Pinnac's "Marble Palace" where Tony did his "thing" originally for Kellogg's National Sales Meeting produced by Dick Jacobsen and L. Burnett Co and Pinnac's Jim Johnson. Tony, Kellogg's Sugar Flakes mascot, is played by Burt Jim Cahill.

PLEASE RUSH!

You pride yourself on being a good on-time producer. But how many times have you been caught in unforeseeable delays during writing, production and post-production phases of the show?

Too many to remember?

Then you said to the lab: "I know we're late, but we've just got to meet our deadline."

At Capital we realize that this is the nature of the business: "PLEASE RUSH!" So we've done something about satisfying your needs—like using an IBM Production Control System; building a scene tester that's compatible with Bell and Howell's modern color additive printers; printing from double rank internegatives for higher quantity—and quality.

We're used to rushing for you at

When Beatrice Foods puts recipes on film

CHILI CON CARNE

2 lbs. meat, chopped fine
4 tbs. Gebhardt Chili Powder
2 cloves garlic, minced
4 tbs. flour

4 tbs. fat
1 tbs. salt
1 qt. water
1 large onion, chopped

Use cheaper cuts of meat: cut in small chunks (do not grind).
Mix with Gebhardt Chili Powder, garlic, flour. Melt fat in deep
pot; fry onion until tender; add meat mixture. Cook 15 minutes;
add salt; gradually pour on hot water. Simmer one hour or
until tender.

Home Ec students eat it up.

More and more, these days, Miss Teen-Age America is becoming interested in Mexican and Chinese cooking. She wants to eat more of it—and she wants to prepare it herself!

One big reason for this development is Beatrice Foods.

In classrooms across the country, Beatrice has been introducing millions of students to the pleasures of foreign cuisine through a series of tempting films. Expert chefs show them how to prepare dozens of exotic specialties. And these films whet lots of young appetites for the Gebhardt Mexican Foods and LaChoy Chinese cookery packaged by Beatrice.

Millions of women are enjoying these films, too.

On television. And at hundreds of resorts. In addition, they're watching other entertaining and informative Beatrice films about its Jolly Rancher candies and Burny Bros. baked goods.

These audiences—the older women and the oncoming generation—represent giant marketing opportunities for food processors. *Both* groups influence what goes on the table right now—and the youngsters will be clearing supermarket shelves of their favorite products for years to come.

To reach this big, big market, Beatrice works with a big, big distributor of sponsored films. The biggest, in fact: Modern.

If this gives you some food for thought, give us a call.

MODERN TALKING PICTURE SERVICE, INC.
1212 Avenue of the Americas, New York, N.Y. 10036

Want more information about Beatrice Foods' films? Or about how sponsored film programs can benefit your company? Write to Modern.

On Our Cover

"A particularly relevant mood of starkness" is reflected in the cover photo of one of the corridors used in the multi-media maze created by Coffin/Christensen in Seattle for Pacific Northwest Bell. Continuing its coverage of the ever-increasing use of multi-media presentations, BUSINESS SCREEN reports the complete story of the Coffin/Christensen presentation beginning on page 24.

Pan Am to Equip Jets with New Bell & Howell System

Pan American World Airways will equip its fleet of 25 Boeing 747 superjets with a new advanced color motion picture entertainment system engineered by the Bell & Howell Company. "In addition to the superjets, 101 of Pan Ams Boeing 707 fleet will also be equipped with the Bell & Howell system," said N. E. Halaby, president of the airline.

Under terms of the contract, which is in excess of \$16,000,000, Pan Am will lease the equipment from Bell & Howell which will supply the films for the airlines Theatre in the Air programs.

Pan Am will utilize three wide screens in its 707s, each 50 inches by 25 inches. Two of the screens will be in the economy section of the aircraft and the third in the first class compartment.

Installation of the system on the 707s will begin this month with approximately 45 aircraft equipped by June, and the remainder by December.

The 747 superjets will be equipped with six screens ranging in size from 18 inches by 36 inches to 26 inches by 72 inches. The new Theatre in the Air system will be installed in each of Pan Am's 747s at the Boeing

plant prior to delivery to the airline.

"Each of the 707s," according to Bell & Howell President Robert A. Charpie, "will be outfitted with a 16mm projection system. The system will feature new concepts such as remote lens focus control, standby projection lamp and automatic film rewind, which will simplify the on-board projection operation," Charpie said.

To start the motion picture a stewardess will merely push a button with the system automatically shutting off at the conclusion of the feature.

Under terms of the contract, Bell & Howell will provide total service support on a world-wide basis, with a network of technical facilities maintained by the Bell & Howell Airline Service Company, a subsidiary of the parent company.

Hollywood Film Acquires Wil-Mar Manufacturing Co.

In an all cash deal Hollywood Film Company acquired the Wil-Mar Manufacturing Company of Pasadena, California.

Wil-Mar is a job shop manufacturer specializing in producing precision components for the aircraft, optical and photographic industries.

Hollywood Film Company is

a closely held corporation, co-owned by Ben and Harry Feitelbaum and engaged in the business of manufacturing and distributing film handling and motion picture laboratory equipment.

Acquisition of Wil-Mar will add the additional manufacturing facility required for the companies expansion program into the field of motion picture printing equipment. Wil-Mar's total capability will be utilized exclusively for manufacture of Hollywood Film Company products.

Technicolor Adds Loading Facilities for Cartridges

Technicolor, Inc. has expanded its facilities for loading super 8 film into cartridges through a new licensing program, according to Robert Kreiman, vice president and general manager of the Commercial and Educational Division.

Technicolor has entered into license agreements with a number of firms across the nation to load both silent Magi-Cartridges and optical sound Movie Cartridges. The cartridges are used with Technicolor 8mm and super 8 Instant Movie Projectors.

"The success of cartridge film," said Kreiman, "has made this expansion necessary. Our own cartridge facility in Phoenix will continue operation, but the demand is now so great that other facilities are needed. Many film producers, especially on the East Coast, have expressed a demand for local cartridge facilities. Film organizations licensed by Technicolor to load cartridges are required to maintain rigid standards."

"We are confident," Kreiman added, "that this expanded capability will enable industrial and educational film producers to meet the growing demands for cartridge films."

According to Technicolor, the following firms are included in the present agreement: Super 8 City, Alexandria, Virginia; In-

ternational Communication Films, Santa Ana, California; Bonded Services, New York, New York; Reela Film Labs, Miami, Florida; Audio-Graphics, Los Angeles, California; Modern Trim, New York, New York.

Arriflex Holds Prices Despite Higher Export Tax

Paul Klingenstein, president of the Arriflex Corporation of America, announced that his firm will, for the time being, maintain prices on Arriflex cameras in spite of West Germany's recent adoption of a 4 per cent export tax.

The export tax went into effect in early December and was matched by a 4 per cent reduction in West German import duties. These tax changes were implemented to strengthen the Free World's money market and stabilize exchange rates, in the light of West Germany's extremely strong economy and export surplus.

Birns & Sawyer Adds New Building During Expansion

Continuing its expansion in the motion picture equipment business, the sales and rental firm of Birns & Sawyer, Inc. announced the purchase of a 14,000 sq. foot concrete building at 1026 N. Highland in the heart of Hollywood.

"The building is excellent for our needs," said Jack Birns, president. "There is easy loading dock access for our rental customers, both from the large parking lot as well as alleys to Highland and Romaine. The sales area is beautifully lit, high-ceilinged and air conditioned.

"We'll be able to combine in one building both our facilities currently located on Vine Street and on Santa Monica Blvd. and hence effect operating economies as well as greater efficiencies of service to our customers."

The transaction details were

not disclosed by the seller, Hunt Foods & Industries, but the purchase price and improvements were said to approximate \$250,000. Escrow closing is expected on February 28.

In addition to motion pictures, the firm is a major supplier to the U.S. Navy, and other marine agencies for underwater lights, which were nominated for an Academy Award this year.

Panda Productions Gets Emmy for "Here I Grew Up"

Clark L. Pangle, president of Panda Productions, Inc., Washington, D.C., received his third television "Emmy" recently at the annual Academy of Television Arts and Sciences Awards Banquet for his production *Here I Grew Up*.

Filed on location, *Here I Grew Up* is a dramatic documentary on the boyhood of Abraham Lincoln and received the Outstanding Achievement for Excellence Award in the independent producer's category. Senator Everett Dirksen, a Lincoln

Clark Pangle (left) receiving his "Emmy" from Bob Crane, star of "Hogan's Heroes" and host for the ceremonies.

scholar, served as host and narrator of the production.

The film was produced by Panda Productions for the National Park Service and premiered on WTPO-TV in Washington on Lincoln's birthday 1968. The film is being made available to schools and other interested parties through the Division of Audio-Visual Arts, National Park Service, Harpers Ferry, West Virginia 25425.

Visual Literacy Conference Scheduled in Rochester

A National Conference on Visual Literacy will be held in Rochester, N.Y., at the end of March, 1969.

The conference will be a forum for an exchange of ideas among educators and others involved in this new field.

The concept of visual literacy is that young people, by learning to "read" and "write" visually, especially with photography, become capable of communicating more effectively in all ways, and adjust more quickly and favorably to society.

The chief means by which today's explosion of new knowledge is spread is through the tools of visual communication: photography; printing, publishing, and graphic design; audiovisuals; advertising; motion pictures and television; storage and retrieval of information on microfilm; maps; engineering graphics; and various combinations of these and other devices in education, business, and other fields.

How to enable the student to grasp fully what today's visuals are telling him, to make full use of visual means in expressing himself, in other words to be fully literate visually as well as

verbally, is the question educators are exploring.

The purpose of the National Conference on Visual Literacy will be to bring together many persons working in the field from various parts of the nation. These will include photographers, specialists, linguists, people concerned with learning disabilities, authorities in the arts and industrial arts, educational psychologists, persons working in perceptual research, and audiovisual experts.

Capital Begins Super 8 Processing in Washington

Capital Film Laboratories, Inc., has inaugurated super 8 printing and processing services from their Washington laboratory.

In announcing the new services, Capital President Alfred Bruch said, "This is a major step in our continuing efforts to provide full range post production services to our clients. We will not provide regular 8 services, however, due to the rather dramatic decrease in regular 8 applications in industry, government and education. Super 8 is the new emerging medium, and we

Ken Smith's Mexican Dubbing Firm Bankrupt

Mexico City, Dec. 30—The Arbitration Council ordered the Ken Smith dubbing studio which had declared itself bankrupt to pay back salaries of \$120,000 within 30 days to members of the technicians union (Technicos y Manuales) or see its lab and equipment placed on the auction block.

The studio, dubbing U.S. tv series into Spanish here, suspended operations several weeks ago.

DAILY VARIETY

Our sympathy to those U. S. Producers who succumbed to the appeal of cheap prices, and risked inferior quality.

Price-wise, we cannot compete with foreign dubbing studios. We do not try. We maintain the highest quality. We pay top U. S. salaries and studio fees. And we pay promptly.

We are ready to meet your most exacting translation and dubbing requirements.

Gordon Buys Ford HemisFair Projection Equipment

Alan Gordon Enterprises Inc. has purchased the unique motion picture in-the-round projection equipment used by the Ford Motor Company at the recent HemisFair '68 in San Antonio, Texas.

The equipment, which includes nine specially designed projectors capable of beaming a film on a 360° screen, will be assigned to the Gordon Projection Division in North Hollywood, Calif.

At the Ford exhibit the projectors flashed a 10-minute movie on a 16-foot-high by 146-foot-long screen. The system is one of the few of its type in the world.

Reeves Broadcasting Acquires Actron Corp.

Reeves Broadcasting Corp. and Actron Corp. have agreed in principle for the acquisition of Actron by Reeves. The announcement was made by Hazard E. Reeves, chairman and chief executive officer of Reeves, and H. Scott Killgore, president of Actron.

"The video services Actron offers in the non-broadcast television area parallel those offered by Reeves Video Division in the broadcast area," Reeves said. "Actron's capabilities compliment our present activities and will enable us to offer full, across-the-board video services to every class of user."

Actron operates production and post-production services, and

provides systems design, installation and installation for industrial and educational non-broadcast television users.

Actron will operate as an autonomous unit within the Reeves Educational Service Division. Its present management will continue to operate the company. Actron's facilities are headquartered at 565 Fifth Avenue, New York, New York.

Medical A-V Men Assist World Health Organization

Representatives of the National Medical Audiovisual Center in Atlanta, Georgia, U.S. served as temporary advisers to the World Health Organization on the use of audiovisual materials and techniques in biomedical communication.

Dr. Norman L. Cole, Chief of Educational Studies and Development Section, and Robert Craig, Special Education Programs Officer, participated in a series of seven Inter-Regional Seminars on Teaching Methods and Teaching Aids in six nations of Europe and the Middle East during September and October.

The National Medical Audiovisual Center (NMAC) is the U.S. Public Health Service's primary center for production, distribution, and utilization of audiovisual teaching materials in the biomedical fields. It is a component of the National Library of Medicine, National Institute of Health. Two major programs of the Center offer advisory and consultation services to medical health installations on the development of audiovisual communication systems and the integration of audiovisual media into curricula and developing curriculum. More than 80 institutions in the United States and abroad received such services this year.

The first of the World Health Organization (WHO) Seminars was held in Ankara, Turkey, where Dr. Cole and Craig spoke at Hacettepe University to professors of medicine from Roumania, The Ivory Coast, Algeria, Morocco, The Congo, Haiti, Cambodia, and many other countries.

Other seminars included Sofia, Bulgaria; Teheran, Iran; Stockholm, Sweden; Utrecht, Netherlands; and Zagreb, Yugoslavia.

Stand by .. quiet please .. roll sound .. speed .. camera .. rolling .. slate .. scene 4A, take 2, sound 2..okay, action..Hold it, cut .. would you mind taking a step to the right and take a couple of beats after I say action before you talk ..

Is that a way to make a documentary film? We don't think so.

take "Employing the Disadvantaged," a film we just completed for BNA Films. Suppose you're on location in a plant in the Watts section of Los Angeles. You strike up a conversation with a guy on his coffee break. You realize he's got something very important to say, but you also realize you can say it only once — to you, at that moment, on that spot. Cut him off and start the "lights, camera, action" routine and he'll freeze. So you nod to your cameraman — two people: cameraman with a hand-held Auricon, soundman with a Sennheiser 404 directional microphone. They know what's up. They start talking as you go on talking. It's not

candid. The worker knows he's being photographed, but there's nothing to get him up tight, and he goes on pouring his gut out. It turns out to be the scene you will use to open your film. You couldn't have gotten it any other way. You expose another 100 rolls of color film that way, and you spend four months editing. Does it work?

The Chicago International Film Festival judges thought so. They awarded it a Gold Hugo, the first prize for industrial films.

BNA thought so, and they're the ones we made the film for. BNA ought to know. It's their business to know what films business wants.

If you've got a film in mind that can't be made, or shouldn't be made, in the "lights, camera, action" style; a film about people that you want to be credible as well as informative, screen some of our films. In addition to "Employing the Disadvantaged," we have recently made other award winning films for the Metropolitan Life Insurance Company, National Educational Television Network, the U.S. Department of Health, Education and Welfare and the National TB Association.

Hulfish Heads Marketing For Spindler & Sauppe

A ten year veteran of the audio-visual industry, James W. Hulfish, Jr., has been appointed director of marketing for Spindler and Sauppe, Inc., Glendale, California.

For seven years the director of information for the National Audio-Visual Association (NAVA), Hulfish has most recently served as the marketing head of Elco Optisonics Corporation (Montgomeryville, Pa.) and in customer relations for Polacoat, Inc., (Blue Ash, Ohio).

In his new position Hulfish will be responsible for developing promotional materials for the company's "Selectroslide" projectors and accessories as well as coordinating its expanding national advertising campaign. In addition, he assumes responsibility for creating and presenting audio-visual programs designed to assist both dealers and consumers in the use of sophisticated slide presentation systems.

HULFISH

HEDDEN

Calvin's Hedden Fills SMPTE, ACL Posts

William D. Hedden was recently elected 1969 president of the Association of Cinema Labs. Hedden is vice president of Calvin Productions, where he heads the company's laboratory and technical services.

Announcement of his election followed closely his appointment as sections vice president of the midwest section of the Society of Motion Picture and Television

Engineers. In that capacity, he will have responsibility for coordinating all work of the Society's 12 sections and will assist each section with monthly meetings and programs.

Sandler Film Names Two New Vice Presidents

Richard Perkins has been named vice-president and created the position of director of the film commercial division of Sandler Films. In his new capacity, Perkins will bring his distinctive "approaches" for commercials.

Morley Skolnek has been appointed vice-president of Sandler Films and executive vice-president of the company's film commercial division.

Skolnek, who has been associated with the company for five years, will devote himself primarily to managerial functions.

Byloff, Wolfson Promoted During Reeves Changes

Robert Byloff has been promoted to vice president of Reeves Broadcasting Corporation. Byloff will become president of the corporation's Video Division which was formed as a separate division early in 1968.

In a related move, Bruce Wolfson was promoted to vice president of operations of Reeves Video. The promotion closely followed the acquisition of Videotape Center by Reeves Video. Wolfson had been operations manager since 1958.

Four Named in Wilding Executive Changes

John H. Long, vice president of Wilding, Inc., has been appointed chairman of the Wilding plans board for the Howell subsidiary. The appointment gives Long responsibility for

for market and media research and program conception and development on the newly created board.

In another move in the Wilding management restructuring, William R. Winn, senior vice president, has been appointed vice chairman of the board. With Wilding 11 years, Winn became senior vice president and creative director in 1965.

In still other changes during the restructuring, Ralph E. Davis was named vice president and manager of the Motion Picture Production Division, and Boyd C. Hill was appointed vice president and editorial director, a new post.

All of the men will be located in Wilding's Detroit offices.

Hawkinson Retires at I-C After 50 Years Service

A 50-year career in the railroad industry and audiovisual production and administration ended in January as John T. Hawkinson, manager, audiovisual services for the Illinois Central Railroad, announced his retirement. As the IC's director of public relations and advertising, Clifford G. Massoth, said, "he made motion pictures a major tool for training, management and public relations objectives."

A pioneer member of the Industrial Audio-Visual Association, Hawkinson has also long served as that professional organization's vice-president for Illinois. He was re-elected to that post on many occasion and presided over several annual meetings in recent years.

But his career at the Illinois Central will be long remembered for the important series of railroad work study films which were used in Federal hearings on rail industry labor costs and for his wide range of interest in all relevant audiovisual media.

For instance, audiovisuals on railroad signals which he created have been widely used in training train crews; safety education was another primary field for both legal and training film application. All along the Illinois Central tracks throughout mid-America, station masters and other railroad people will miss his regular visitations, his help in arranging community and industry programs and his always-

ready, skilled camera work which helped to bring definitive visualizations of Illinois Central activities and areas to millions during the years in which he created many interesting motion pictures.

Mr. and Mrs. Hawkinson reside on Chicago's far South side and plan extensive travel in the early years of his well-earned retirement. T. Allan Southall succeeded Hawkinson in the administration of audiovisual services at the Illinois Central.

Southall, a former resident of Lexington, Ky. and a graduate of the University of Kentucky with a B.A. degree in Radio, TV and Films has served in TV production at WKYT-TV in Lexington. In 1960 he became associated with the Commonwealth of Kentucky, Department of Public Information, as assistant radio-TV editor. In that post he handled both motion picture and photography, editing and production of statewide radio programs and films, serving under four governors during his tenure.

Coomer Heads Sales for B&H A-V Products Div.

Roger W. Coomer has been promoted to manager of sales for the Audio-Visual Products Division of Bell & Howell Company, announced F. J. Hoback, director of marketing. Coomer's responsibilities include directing the efforts of the division's regional managers and sales administration activity in various specific market segments.

Prior to joining Bell & Howell in 1967, Coomer worked as a buyer for a major department store and in a sales capacity for the glass manufacturing industry.

Snell Elected President of A-V Systems Design Firm

George R. Snell has been elected president of George Snell Associates, Inc., Mount Pleasant, N.J. The firm specializes in audiovisual systems consultation, design, furnishing and installation.

Also A-V manufacturers' representatives, the firm has signed and installed front and rear screen projection facilities for major corporations, educational institutions and the government.

Snell spent four years as a

Introducing...

A complete and unique post production and film laboratory service. Now, for the first time, all your production requirements can be handled under one roof, on one floor (21,000 sq. ft.), supervised by one group of technical specialists and one customer service department.

THE COLOR CENTER is an in-line operation from start to finish, fully integrated technically with computerized and automated equipment. No longer will you have to deal with many different companies, coordinate their efforts and work with many people.

THE COLOR CENTER can service you with:

OPTICAL EFFECTS AND ANIMATION SERVICES —

A complete optical house is part of THE COLOR CENTER. The latest Oxberry optical benches, precision printers, animation stands and a professional staff of technicians are ready to provide you with quality optical and special effect negatives.

SLIDE AND FILMSTRIP LABORATORY:

Slide and filmstrip photography, answer prints and release printing are a specialty at THE COLOR CENTER. Complete facilities for shooting filmstrip negatives, 5254 or 8008, over-night answer print service and quantity filmstrip release printing including automatic slide mounting, make THE COLOR CENTER to-day's most modern and advanced filmstrip laboratory.

MOTION PICTURE LABORATORY SERVICES —

THE COLOR CENTER has all the technical ability to service your film needs in both 35mm and 16mm motion picture release prints. Negative matching, A & B printing, Hazeltine color timing of answer prints, negative-positive and reversal printing, high speed loop panel printers all assure that your films will be reproduced with reliability and on time.

Call to-day for your tour — Ask for Bernie Barnett.

The COLOR CENTER Inc.

A subsidiary of Electrographic Corp., 410 East 62nd Street, New York, N.Y. 10021, (212) 838-3900

AT&T Enjoys Residual Benefits from Portable Version of 5-Screen Show

The American Telephone and Telegraph Company enjoyed a residual benefit when they converted their successful five-screen multimedia show to a two-screen portable version. The production, entitled "Data Communications Today and Tomorrow" originally an hour and a half in length, explains new technological production systems. It was so well received at the 1968 annual newspaper

industry's convention, AT&T asked Ken Sac Associates, New York, producers of the multi-media show, to create 25 portable versions for use in their regional offices.

The abridged program reduced the five screen show to a simple twin-screen version easily presented by a single operator. The entire production is housed in a colorful red white and blue kit, so light weight it can be hand carried. Each kit contains 302 slides in four Carousel slide trays, a 40-minute sound tape, a 16 mm film, and a script containing complete instructions for operating and producing the show.

Besides a verbal introduction for use by the regional program director, the script book contains detailed information on "how to present" the audiovisual program. The instructions explain, with diagram, how to arrange the twin screens and the projection equipment, and even includes pointers on how to assure a successful show. The script was written to accommodate the new visual format, with explicit cues for smooth synchronization of visuals with taped narration.

The trim, smartly designed box was constructed not only to hold all the items compactly, but also to protect them during shipment and storage.

The audiovisual kits are now being used in regional AT&T offices throughout the country.

Contents of the portable 40-minute multimedia show includes slide trays, tape, script, 16mm film and boxes. Sturdy outside container is at left.

**NOW-YOU CAN
ADD NEW LIFE
TO YOUR 35mm-
16mm FILMS
AND SAVE \$\$\$\$!**

RAPID FILM TECHNIQUE can rejuvenate your film library and—

- Save You Time—no need for lost time awaiting replacement film!
- Save You Money—rejuvenate at 1/10th the cost for replacement!
- Save You Worry—all work guaranteed.
- Save You Effort—storage and inventory control available for your film library!

The 4 R's of RAPID Rejuvenation service:

- Remove scratches, fingermarks, stains, blemishes; clean both sides of film.
- Repair film breaks and bad splices.
- Replace moisture through special rehumidification process.
- Retard future deterioration via application of special protective coating.

Why RAPID FILM TECHNIQUE? Faster—Better—More Economical!

- Faster because of nationwide field force of experienced technicians.
- Better and more economical because of formulated method, perfected after nearly three decades of serving all segments of the film industry.

Send for your FREE Trial Certificate today and see for yourself what dramatic effect rejuvenation can have... on your films and to your budget!

To: Rapid Film Technique, 37-02 27th St.,
Long Island City, N.Y. 11101 Dept. B

- Send me my FREE Trial Certificate entitling me to test Rapid Film Technique's special rejuvenation process at no charge.
- Send me your FREE brochure, "Facts on Film Care."
- Please have a rejuvenation specialist call me to discuss complete review of my film library—and how I can actually save money through Rapid Film Technique.

screen executive . . .

Continued

ger of the mideastern audio visual systems division of Teleprompter Corp. Four years ago, he left Telepro Industries, where he was director of industrial education systems, to start his own company.

Murphy Heads Modern Public Relations Work

Philip Murphy has been appointed public relations manager of Modern Talking Picture Service, Inc. In this capacity he will handle press relations and work with clients on special public relations film projects.

Murphy was previously on Modern's staff for 10 years and has worked independently for Modern as well as other clients for the past five years. He has long been the author of *Modern Memos*, the company's newsletter to film sponsors and producers. He is a graduate of Princeton University and a member of the National Association for Industry-Education Cooperation.

Cavanaugh Heads Eastern Sales for Technicolor

Joseph F. Cavanaugh has been named regional sales manager for the eastern division of Technicolor.

Cavanaugh came to Technicolor from Procter and Gamble. He will be headquartered in New York and serve Technicolor audio-visual dealers along the eastern seaboard.

Ellithorpe to Editorial At Hanna-Barbera

Dan Ellithorpe has been appointed supervisor of the editorial department of Hanna-Barbera Productions, according to William Hanna and Joseph Barbera.

Prior to joining Hanna-Barbera, Ellithorpe was associated with Leo Burnett Company in Chicago.

Glasell to Merchandising Post at Universal Training

Universal Training Systems Co. has appointed Don L. Glasell vice president, merchandising. Glasell joined Universal Training after 12 years with Montgomery Ward, Chicago.

In his new position Glasell assumes responsibility for production of training programs designed for business and industry

as well as procurement of prepared training materials and audio visual equipment. Universal Training Systems Co. produces and distributes multimedia materials for sales, management, clerical and systems personnel. The company has specialized in the development and production of audio-graphic materials utilizing the cassette tape recorder in combination with workbooks and other participative materials.

Around the Industry

Tom Freese has been named vice president and production chief of the film division of Goldsholl & Associates, Northfield, Ill. . . . Chicago's LaRue Films, Inc. has added two new staff members; Robert H. Lounsbury as associate producer and production manager; and Dorian Purcell as associate producer and writer . . . Joe Hevesi is the new manager of the industrial film division at Rose-Magwood Productions; formerly with U.S. Steel . . . TV Producer James K. 48 Chris Statuettes Presented

During 16th Columbus Festival

A TOTAL OF 48 "Chris" Statuettes were presented to the top films entered in six categories at the 16th Annual Columbus Film Festival banquet last October. In addition, several hundred others were awarded the cherished "Chris" Award Certificate.

Since its inception by the Columbus (Ohio) Public Library in 1952, this popular festival has grown in size and participation gaining ever greater status as one of the leading U.S. annual film festivals. It's top award, the Chris Statuette, has become one of the leading symbols of achievement for film producers throughout the country. Co-sponsored by the Columbus Area Chamber of Commerce, the festival has adhered to its basic purpose "to encourage and to promote the use of 16mm motion pictures in every form, not only in the local community, but throughout the world."

The most recent festival was held on a bit of a sad note, after its popular and dedicated president, Daniel F. Prugh, was stricken by a heart attack just two weeks prior to the awards banquet. Under the able guidance and leadership of Mary A. Rupe, secretary-treasurer, the banquet was held and awards presented in the Festival's typically fine tradition. BUSINESS SCREEN is happy to report that as of this writing, Prugh is recovering well and back at work on a half-time basis.

Albert J. Rosenberg, vice president and general manager of the Text-Film Division of McGraw-Hill Book Co. keynoted the annual Chris Awards Banquet, where E. H. "Bud" Gillis, director of the Educational TV Network Commission presented the Chris Statuettes.

The 48 films receiving statuettes were selected for their outstanding excellence in the fields of business and industry, education-information, health-mental health, religion, cultural arts and travel.

Selected as the best of the more than 400 films entered, the following films and their producers and sponsors were accorded the Chris Statuette (the producer follows the film title):

Education

Airplanes and How They Fly (Centron Corp., Inc.); *How Solid Is A Rock?* (Encyclopedia Britannica Educational Corp.); *Of Earth and Fire* (sponsor: Lenox, Inc.); *Instincts of An Insect* (Fleetwood Films); *The Royal Silk of Thailand* (Douglas Aircraft Company Film & Television Communications); *Spain, Proud Past and Promising Future* (Neubacher-Vetter Film Productions); *American Farming . . . vital subject ever presented.

Watch these columns for news of U.S. availability. Shown at the Annual Conference of the Information Film Producers of America at San Diego last fall, it has built a sizeable waiting audience.

Production equipment (cameras, etc.) rose from \$27 million in 1966 to \$33 million in 1967. Industrial film producers spent an average of nearly \$10,000 each for production equipment, compared to \$7,500 in the previous year.

What's Being Done With \$110 Million Appropriated for Consumer Education?

Mindful of the Vocational Education Act passed by the Congress in 1968 and with our

Media Master 600 is the up-to-minute means of producing the multiple image presentations so much in demand today. Each Media Master 600 unit can control up to five slide projectors and one motion picture projector, automatically and simultaneously. Controlled by one programmer, a presentation may be projected on one to six screens. Two linked units can control 10 slide and two movie projectors from a single audio signal track. Reliable, automatic programming overcomes both human and economic limitations in the preparation of dazzling programs.

The Media Master 600 utilizes the modern magic of electronic automation to produce unusual, sophisticated effects with 35mm slides. Slide changes, fade-ins, fade-outs, projector switching—all are accomplished automatically by the Media Master 600. A dissolve feature is standard on the new programming unit. Fade-up or fade-down time can be varied from 1/2 to 45 seconds. Even simulated animation can be achieved by successive dissolves from one image to another against a separately-projected background. Media Master 600's instant response makes these effects possible.

In operation, audio tape signals advance a punched paper tape through Media Master 600's reader, relaying commands to any or all of the projectors linked to the unit. The paper tape may be punched manually or by computer. Once programmed, the presentation is mistake-proof. A presentation may also be controlled manually with a remote cord, instead of by audio signal. Media Master 600 assures maximum dependability. Its integrated circuits and solid state components insure both reliability and versatility. For signal track preparation, an automatic pulse generator is included with the programming unit.

A recent survey of the nation's top 500 corporations showed that 71% of the respondents plan multi-image programs in 1969. The era of multi-image presentations is here. So is the technical means of creating multi-image excitement: the new Media Master 600. This sophisticated unit has been put through its paces at The International Film & TV Festival in New York, in agency presentations, and in sales meetings for such clients as Frito-Lay Inc. Manufactured by NRS, Inc., and distributed by Bill Stokes Associates the Media Master 600 is ready for use in the design and presentation of exciting multi-media, multi-screen, multi-image programs on limited budgets.

The Media Master 600 is available for purchase on a six-week delivery schedule. The net price of \$4,500, F.O.B. Dallas, includes the Media Master 600 unit, connecting cables, power cords, projector stands, and a special pulse tone generator.

The Media Master 600 unit and accompanying accessories may be leased for special usage on the following rate schedule: \$150 per day, \$500 per 7-day week, \$1,000 per calendar month, or \$2,500 per year. Details on request.

By O. H. COELN

COMMENTARY

PRESIDENT NIXON'S ADMINISTRATION has a powerful communications' resource in many far-flung audiovisual programs within both domestic and overseas departments of the Federal Government. And there is clear evidence that a thorough review of some of these programs can help America get the message through and vital training done more effectively. From firsthand evidence gathered during recent trips abroad, for example, both USIA and foreign commerce bureaus would be helped by stimulating guidance from the best available talent able to serve the Administration.

The unpopularity of Viet Nam among our friends overseas has apparently tended to heighten the enthusiasm of USIA motion picture librarians, even though their resources cover a wide spectrum of valuable study and reference films. Overseas offices of the Department of Commerce can also supply useful business films and technical guidance. Films of the U.S. Department of Agriculture have played an important role in stimulating food and fiber production in the undeveloped countries. Let there be more of this; use the powerful sight/sound medium where it works best: among influential group audiences. Depending on mass audience viewing of television films from the USIA is not enough; decision makers and heads of important national groups can also be reached by giving them the kinds of pictures important to their own interests and needs.

We recommend that the President's able new Communications' chief, Herbert Klein, call together a Study Group to review national communications' policy. A step in the right direction was recently taken by General Service Administration's a-v chief, James Giblin, in group review and cataloging of Federal films. Another good step, well worth considering by Mr. Shakespeare, new chief of the USIA, is the retention of a dedicated and brilliant young director of that agency's Motion Picture and Television Services, Bruce Herschensohn. His record of highly-creative production and first year of experience at the USIA should not be wasted.

What's Being Done With \$110 Million Appropriated for Consumer Education?

Mindful of the Vocational Education Act passed by the Congress in 1968 and with our

thoughts still on Washington's approach to audio-visuals under the Nixon administration, let us not forget that \$110 million was appropriated for consumer education programs. Is any of these eligible for much-needed consumer guidance films? Can the states acquire and build libraries of consumer-oriented media?

There is certainly no better way to deliver definitive information to both youth and adult groups, all of them served by more than 600,000 16mm sound projectors already at hand. Educational television and public service time on commercial television stations widens the potential audience for such films. *Where are they? Where's a catalog of really factual consumer films already available?* More are certainly needed.

Federal Spending for Nation's Schools Declined 7.3 Per Cent in Recent Year

On the other hand, Federal spending for implementation of formal classroom learning fell 7.3 per cent in 1968-69. Accounting for the drop are reduced congressional appropriations, withholding of funds for noncompliance with desegregation guidelines and inability of some states to use funds because they became available too late to plan their programs.

OECD Arranging for U.S. Distribution of "Not Enough" on Developing Lands

There's word that the great OECD documentary *Pas Assez (Not Enough)*, which won honors at the International Industrial Film Festival in Vienna last fall, will soon be available for outright print purchase through a U.S. film distributor. In case you're not familiar with this subject, it is a 30-minute definitive film on development aid problems. Produced for the OECD (Paris) by the renowned Dutch filmmaker, Bert Haanstra, it has some of the most memorable sequences on this vital subject ever presented.

Watch these columns for news of U.S. availability. Shown at the Annual Conference of the Information Film Producers of America at San Diego last fall, it has built a sizeable waiting audience.

Evening Network Programming Begins on National Educational TV "NET"

In mid-January, National Television achieved network status, speeding the delivery of pertinent programs to its 148 public-TV affiliates on a much more immediate basis. The near-network evening telecasting was made possible this year by a drastic reduction in Bell System rates through special action by the Congress and by the establishment of a Corporation for Public Broadcasting to help pay the costs. First weekly schedules showed that Monday programs will offer *NET Journal* (filmed documentaries); Tuesdays will be devoted *NET Festival* (a cultural series); Wednesday evening's show will include a monthly consumer series (*Your Dollar's Worth*) and news and science programs. The Thursday network program will feature *NET Playhouse*, featuring new American playwrights and BBC productions.

Audiovisual Market Report Reveals Business Spent \$412 Million for A-V

Kudos to Tom Hope, market analyst in the Motion Picture & Education Markets Division at Eastman Kodak, who has again authored the *only* statistical studies of the broad audiovisual market in the U.S. Prepared exclusively for the *JOURNAL* of the Society of Motion Picture and Television Engineers, Mr. Hope's report (published in the November issue) shows that the nontheatrical and audiovisual market of America crossed the billion-dollar mark by the end of 1967.

Of special interest to our readers is the disclosure that business and industry spending in the A-V field climbed to \$412 million, an 11 per cent gain over the \$372 million spent in 1966. Government on all levels is said to have expended \$131 million as against \$118 million in 1966, also showing an increase of 11 per cent.

The Hope study notes that "among the most significant developments of 1967 in the total nontheatrical field was the fall-off of cine-8 footage processed, while super-8 tripled. Processing of 16mm and 35mm film was off slightly. The basis for this part of his report is the annual survey taken by the Association of Cinema Laboratories.

His report indicates that business and industry accounted for the largest number of new film titles in 1967 with an estimated 7,500 pictures. In contrast, educational films accounted for only 2,200 titles, including college and university productions.

Total projector sales for 1967 were estimated at \$47 million, off a million from the previous year. Electronic equipment sales, including closed-circuit television apparatus, are disclosed as an estimated \$60 million. Production equipment (cameras, etc.) rose from \$27 million in 1966 to \$33 million in 1967. Industrial film producers spent an average of nearly \$10,000 each for production equipment, compared to \$7,500 in the previous year.

THERE'S ONLY ONE PRO-JR.

FIRST
CHOICE OF
PROFESSIONALS

The Pro-Jr. line of tripods has been a mark of excellence for over 27 years. More than 30,000 have been sold all over the world.

Write for detailed specification sheets describing our whole line of Pro-Jr. Tripods, Ball Joint Heads, Hi-Hats, cases and accessories.

\$110.00

PRO-JR. ADJUSTABLE V-GROOVED TRIPOD LEGS

Constructed of hard maple wood with aluminum and steel hardware. For use with all Pro Jr. tripod heads, except integral ball joints. The "V" groove design gives almost twice the gripping surface as before and greater rigidity at any extension is assured.

PRO-JR. MARK II FRICTION HEAD

The new Mark II Pro Jr. Head with Teflon® bearings combines fluid-head smoothness with the fast, free movement of a friction head. Features include "T" level; accessible knob for mounting camera; adjustable angle telescoping pan and tilt handle; 3 positions for attaching pan handle; tension control knobs.

Head \$150.00 only

with Pro-Jr. V-Grooved legs \$250.00

PRO-JR. FLUID DRIVE HEAD

Just as the original Pro-Jr. Friction Head was a world leader in reliability, this has created a new standard for fluid heads in the motion picture industry. Exclusive formula of silicone fluid assures maximum smoothness. Features positive grip locks; camera balancing and tightening lever; removable pan handle adjusts in any position; "T" level; accommodates any camera up to 30 lbs.

Head \$395.00 only

with Pro-Jr. V-Grooved legs \$495.00

PROFESSIONAL "BALANCED" TV HEAD. MODEL "C"

HEAVY DUTY MODEL FOR CAMERAS WEIGHING UP TO 135 LBS.

Offers smooth tilt and pan action, perfect balance. Quick release handle locks in position. Mechanism is enclosed, rust proof, needs no lubrication. Has tension adjustment, built in spirit level and telescoping extension pan handle. Slotted tie-down screw counterbalances camera for film load or long focal length lenses. Mounts on professional type or all-metal tripod.

Head \$750.00 only

PRO-JR. ADJUSTABLE V-GROOVED BABY TRIPOD LEGS

Specially designed shoe and spur for added sturdiness. Constructed of hard maple wood with aluminum and steel hardware. For use with all Pro Jr. tripod heads, except integral ball joint.

\$110.00

PROFESSIONAL ALL-METAL TRIPOD

\$350.00

Has cast top flanges and upper leg portion made of one piece aluminum alloy casting. Lower legs are 1½ inch seamless steel tubes, hard chromed to prevent corrosion. Calibrated legs slide easily and have tie rods to center tube for automatic leveling.

For use with Model "C" type head.

\$7.50

PRO-JR. 3 WHEEL PORTABLE DOLLY

Features single positive leg lock to position 4" wheels accurately, two position locks at each caster enables operator to dolly in straight line or to "free wheel" quickly. Collapses into easy to carry package.

\$125.00

HEAVY DUTY MODEL W/ 5" WHEELS: \$175.00

MODEL "C" PRO-JR. METAL COLLAPSIBLE TRIANGLES

Insures rigidity, prevents tripod legs from slipping. Adjustable feature permits extensions of triangle to vary leg spread. Collapses for easy portability.

Model "C" with leg clamps. \$39.50
Model "B" without leg clamps. \$32.00

EVR— PROMISE OF THE FUTURE?

Called everything from a toy to the communications miracle of the future, an aura of confusion has long surrounded CBS' EVR system. Here is a complete, current report of its capabilities and potential applications following its first public demonstration.

WITH THE FIRST public demonstration of CBS' controversial Electronic Video Recorder (EVR) system, many additional details of the system came to light and many of the questions of its capabilities were answered.

Heralded as both a "revolution in the 'knowledge industry'" and "a rich man's plaything," EVR and its potential or lack of it has stirred comment and observations from audiovisual men throughout business, education and government. In its first public demonstration (attended by BUSINESS SCREEN), EVR was shown to store pictures with sound for playback through a standard TV set in much the same fashion that a long-playing record stores sound for later playback on a phonograph.

Basically, there are three elements to an EVR system:

► *The thin EVR film* is dual-tracked, and carries its sound in parallel lines on a magnetic track, along with two rows of visual frames. Although the film is miniaturized, the image reproduces with sharper definition and clarity than a conventional television picture. The film has no sprocket holes, and a tiny cushion of air separates the layers of pictures when stored in the cartridge.

► *The circular EVR cartridge*, which holds the film, is seven inches in diameter and has a maximum capacity of 750 feet of film, 8.75 mm (under $\frac{3}{8}$ inch) wide. This is equivalent to 180,000 picture frames or 52 minutes of programming.

► *The EVR player* is compact, versatile and simple to operate. A lead from the player is easily attached by handclips to the external antenna terminals of the television set. Then the film cartridge is placed on the player, the television set turned on to a channel that is not broadcasting, and the player starter button pushed. The film automatically threads itself past an electronic sensor that converts the film image to electrical impulses, and then transmits these impulses — along with the sound — into the television set. The player features buttons for speedy forward and rewind, a fingertip adjustment for slow scanning of individual sequences, and the capability for freezing any frame on the screen without damaging the film or dimming, flickering or blurring the image.

Since transmission to the set is direct and there are no buildings or

EVR . . .

continued

other interference to contend with, there is no ghost image or other picture or sound distortion. Nor is there any projector noise to distract the viewer, or interfere with concentration, conversation, comment or supplementary instruction. The system can also be operated in normal light without lowering the shades.

Although much of the EVR technology was developed by Dr. Peter C. Goldmark, president and director of research at CBS Laboratories, as an offshoot of the Division's space research programs with U. S. Government, the Company will not manufacture the system itself. CBS will license its production among leading manufacturers. At first, players will appear as attachment units, styled and built by manufacturers of home entertainment equipment. Once manufacturers get into full production, customers will be offered a variety of models with complete cartridge interchangeability. The film, however, will be recorded, printed and inserted in cartridges at CBS plants.

The CBS Electronic Video Recording Division plans to develop an EVR market among the television, publishing and motion picture industries; video-tape libraries; educational institutions; and suppliers of informational, training and recreational materials. With these outlets as a start, EVR could revolutionize the storage and exchange of information in education, industry, the arts and the home.

The classroom

Electronic Video Recording could give new scope to television's immense potential in education. As the Carnegie Commission for

An external connection like this clamps the EVR player to any conventional television receiver, regardless of its location.

Educational Television noted, a more versatile playback technology in educational television is the one thing needed to return to the classroom the flexibility that the present uses of broadcasting deny it. With such a technology, according to the commission, "the teacher can select the program, play it at the moment of his own choosing, replay it at will in whole or in part, interrupt it for comments." By providing this technology, EVR may help educational television make the "massive contribution to formal education" that the Carnegie Commission feels is not only possible, but is imperative.

Today, teachers must schedule classwork around broadcast hours, and they have no control over what appears on the screen — or when. With EVR, the teacher might integrate educational films more effectively into the smooth flow of his classwork. He could preview and choose. He could stop the program for comment or for general discussion. He could schedule lessons at his own discretion,

and show his films either to individual students or to large groups simply by linking single EVR player into as many television sets as he needs. He can even play them several classrooms at once.

Because EVR cartridges are considerably more economical than conventional films, schools may no longer need to depend on central or outside audio-visual libraries, frequently at distant points. They could buy up their own libraries.

Home use

The process of education does not end when one leaves school. It is only just beginning. The swift pace of change in scientific technology, the arts and industry forces millions of Americans to study at home, and many actually enroll in formal correspondence courses to sharpen and extend their skills.

Whether young or old, a high school or college graduate, an individual must study to keep up, to adapt, to increase his com-

The self-feeding EVR cartridge (left) is seven inches in diameter and drops on the player in the manner of a long-playing record. It contains up to 30 minutes of visual and audio material. The components of the player are shown in this CBS Laboratories prototype with the housing removed (right).

ence. Since 95 percent of America's 69 million homes have television sets, EVR is a local key to home study. Wherever in the world they may be, the most inspired educators and other leading authorities in their fields are now able to appear on film and give the student the next best thing to face-to-face lectures. And he will be able to study at his own learning pace — in the calm and privacy of his own home.

When not being used for home study, EVR can also provide hours of exciting and stimulating recreation. Before that Saturday morning round of golf, the EVR owner can slip a cartridge on the player and get a quick lesson from Jack Nicklaus. Or he can settle down for an evening of *Hamlet* or some other selection from his library of Shakespeare. Perhaps he will be in the mood for theowitz concert at Carnegie Hall, or Marianne Moore, Robert Lowell or some other favorite poet, reading from his own books.

Industry, government and business

On the job, EVR may become a major management and training tool. With its low dollar-per-minute cost for creating, disseminating and displaying training programs, EVR could reduce the teaching load on overworked instructors. Whether they are studying to be salesmen, dental technicians, lathe operators, engineers, computer programmers, officers, executives or astronauts, trainees can learn via EVR. The government could be able to teach the disadvantaged more efficiently and effectively. Hospitals might change staff films on medical hygiene or new patient-care techniques; at his leisure, a busy surgeon can watch closeups of new

Motorola to Make EVR Player

An agreement has been signed licensing Motorola Inc. to manufacture and market the CBS Electronic Video Recording (EVR) player. Joint announcement was made during the first public demonstration of EVR.

It was indicated at the demonstration that the black and white type EVR player will be produced in one of Motorola's Illinois facilities and will become available in substantial quantity by July 1, 1970. A color version of the EVR player is expected to be in production during the last half of 1971.

Initial markets to be served include hospitals, school and industrial organizations. A fine potential is also forecast in the hotel-motel field.

"These markets are not in any sense outside limits," said Elmer H. Wavering, president of Motorola Inc. "Rather they represent the most obvious needs to be served on a priority basis. These are markets in which we now provide other commercial equipment and for which we now have on board fully qualified engineering,

operations in his field. Scientists and engineers might be able to see and hear about the latest developments in their areas of specialization — not just read about them.

And the future? Perhaps one day, there will be an entire encyclopedia in EVR cartridges, stored in a space no bigger than a single paperback book. There could be vivid

production and marketing people."

Among the details of the agreement revealed at the demonstration is the fact that Motorola is, at present, the only U.S. company licensed to produce the product and that CBS will receive royalties under its terms.

The first model EVR player to be introduced will be an industrial-educational unit of "ruggedized" design. A consumer market type player will follow. Exact costs will be announced at a later date.

Regarding the selection of Motorola to manufacture the EVR player, Frank Stanton, president of CBS, noted, "We are impressed with Motorola's broad diversification in electronics equipment and the wide variety of markets the company serves. Motorola enjoys a leadership position in several important product categories, including solid state color television; hospital communications systems; and classroom and hotel-motel television. It has a reputation for quality of engineering and production. And it is an aggressive competitor in the marketplace."

motion pictures showing the circulation of the blood or the way a nuclear reactor works. There could be animated geography lessons illustrating how volcanos erupt, chasms open or canyons split off. There might be an essay on political science with the President himself addressing the viewer. Or there might be an essay with Bertrand Russell observing that "the more purely intellectual aim of education should be the endeavor to make us see and imagine the world in an objective manner as far as possible as it really is . . ." As a tool of education and enlightenment, EVR might help us see — and experience — the world in just that way.

Still many questions

With all of this, there are still many questions to be answered by the potential EVR user, when it becomes available sometime in 1970 (see box). EVR quality is very good, but is it better than VTR quality? Which will be the most convenient? Which will be ultimately cheaper? Present videotape recording equipment is improving steadily, and will undoubtedly be better in 1970 (when EVR is commercially available) than it is today. How will the two compare then?

As of this writing, EVR appears to have several inherent advantages, but its ultimate success or failure rests in the hands of the potential users of the system, whether their use be for business, government, education or home. They are the ones who will have to decide if EVR will do the job they want it to better and/or cheaper than whatever else is available.

Watching Dr. Peter Goldmark, president of CBS Labs load an EVR player during the first public demonstration are (l. to r.): Felix Kalinski, president CBS/Comtec; Elmer Wavering, president of Motorola, Inc.; Frank Stanton, president of CBS; Arthur Ochs Sulzberger, president of the New York Times; and Robert Brockway, president of the EVR Division.

Mixed-Media Maze

Tells of Changing Social Environment

Called upon to convey the essence of the changing social environment to forty executives, Coffin/Christensen Productions created a moving "experience" for participants in a clever plastic maze which commanded attention and involvement.

PACIFIC NORTHWEST BELL received presented Coffin/Christensen Productions of Seattle with the problem of communicating the essence of the changing social environment to a group of some forty executives of the company at their annual conference. The important consideration was to insure the group's full participation in an auditory, tactile and visual experience.

Coffin/Christensen responded by developing the concept of a plastic maze, representing the contemporary scene, in which the experience was to take place. The maze was divided into four sections, each area symbolizing a factor of social perspective—namely, The Worlds of Media, of Social Fragmentation, of Frustrations and Value Systems, and Urban Crisis.

The accompanying scale diagram of the Council House of Salishan Lodge, Oregon, outlines the spatial dimensions of the presentation.

The walls (8 ft. in height) and roof of the maze were built out of black visqueen plastic which created a particularly relevant mood of starkness into which was set an apparently confused mass of information pertaining to the shifting social framework that it symbolized.

The members of the conference, having heard an introductory speech (*in area*) relating to the content of the maze, were ushered individually, at one minute intervals via closed circuit TV into the corridor.

Each person began the experience by picking up an IBM card onto which was printed a number of short questions relating to the World of Media. Along the sides of the corridor were winding walls of black visqueen on which were pinned a flowing line of photostats. At three locations were continuously playing tape recorders. The first played Musak-type music, the second combined that with a polished band piece, and the third was a conglomerate of those plus some acid rock. This medium symbolized the generational and environmental changes in auditory response.

At the end of the corridor was a television camera and monitor recording the person's progress down the passage and giving instructions into the maze as he approached. Another question card was available at this point introducing the World of Social Fragmentation.

The main area of the maze — now entirely enclosed with black visqueen interspersed with approximately a hundred feet of yellow and clear air-filled columns made out of polyethylene that protruded through the walls and ceiling — started here. Immediately to the right was a telephone booth, whose glass on three sides was covered with rear projection material, inset into the visqueen walls. The telephone rang as each person approached it and when he answered, the sound of laughter interspersed with words and phrases was heard while at the same time 2 Carousel slide projectors and a 16mm Bell & Howell projector

One of the corridors of the maze (left) which created a particularly relevant mood of starkness

er bombarded the sides of the booth with
 rtising material designed by Coffin/
 stensen.

he next point of reference was a table
 an Audiscan and earphones on it. The
 er pressed a button that activated the
 discan on which appeared a typical pub-
 lications film. The sequence lasted for five
 nds after which the discordant sound of
 ephone continuously ringing as a back-
 nd to a rock song came over the ear-
 nes and behind the viewer an 8' by 20'
 projection screen lit up by 2 Carousel
 projectors and a 16mm Bell & Howell
 ector showed scenes of social turmoil.
 r sixty seconds the machinery stopped and
 viewer was directed on by a girl's voice
 ng: "Please proceed. The world is wait-
 for you. This is a recording", which was
 owed by the beeps of a touchtone tele-
 ne. The viewer then picked up another
 as he went along into the World of Fru-
 ons and Value Systems.

n this area, he was confronted with a con-
 ous flow of photostats depicting confusion
 uncertainty. At the head of one corridor,
 t into a photostat, was a TV set, also
 vated by a button, showing an executive
 vering a talk about social commitment.
 the viewer sat, involved with the sights
 sounds coming from a small black box,

another screen to his right lit up by a Bell
 & Howell graphically depicting the harsh
 reality of a thermonuclear explosion.

At the end of this sequence, with another
 card in hand introducing the World of Urban
 Crisis, the viewer wandered down the corri-
 dor past a Cousino tape recorder emit-
 ting a discordant nerve-wracking sound (symbolic
 of frustrations) until he reached a triangular-
 shaped room made with three 9' by 12' rear
 projection screens. The floor, ceiling and
 'walls' were covered with nipple-like plastic
 packing material. Three Carousel slide pro-
 jectors were so placed as to cause consider-
 able distortion. In the center was a table on
 which a Ramos Fizz awaited each participant.
 As he sipped this drink, the screens lit up
 showing a series of randomly timed slides
 concerning the urban scene, while a tape re-
 corder played a melodic ballad popular in
 suburban homes. The intent was to contrast
 the ease and comfort of suburbia with the
 turmoil and wretchedness of the inner city,
 that is the ghetto.

When the music and slides stopped the
 viewer left the maze for Area 3 where a row
 of chairs was arranged. On each chair was
 the set of cubes known as "Instant Insanity",
 a puzzle produced by Parker Brothers. Also
 present was a closed circuit TV camera and
 two 23" monitors which recorded the group's

movements. The rationale for this feat-
 ure was to make the viewer aware of the spec-
 tator role which the media are more and
 more imposing upon us.

After the entire group had filtered through
 the maze, another speech was given explain-
 ing the content of the maze in terms of the
 new attitudes arising out of the rapidly shift-
 ing social framework. This was backdropped
 by a light show produced by two dissolving
 Carousel slide projectors. The slides, pur-
 posely made in black and white, represented
 the dimension of media in contrast to the
 speaker who stood for the obsolete world
 of non-visual participation. The slides, ran-
 domly operated by the speaker, were pro-
 jected so as to cover the entire wall which
 the group was facing.

Following the speech, the group moved
 back through the corridor into Area 1 again.
 The chairs in that room had been rearranged
 into sets of six — placed on platforms so as
 to dissolve the members of the group away
 from conformity to their relative positions
 within the company-faced seven angled 23"
 televisions. By the side of each chair was
 a button connected to a response meter built
 by the Aero Marc Company of Seattle.

After all were seated, the speaker respon-
 sible for this part of the presentation intro-

mixed-media maze . . .

continued

duced the topic live via closed circuit TV from the projection area. A 16mm black and white film—written and produced by Coffin/Christenson for the occasion—which had been transferred to video tape was shown over closed circuit on the seven TV sets. During the film, which depicted the attitudes and conditioned prejudices of the Business World, each

Two Carousels on dissolve with slides representing "the dimension of media in contrast to the speaker who stood for the obsolete world of non-visual participation."

person was required to press the button in agreement, or leave it alone in disagreement, with the thirty-three situations posed, thereby forcing him into taking a position, into recognizing the degree of his involvement. This voting was registered on the response meter so as to record the reactions of the group in percentages.

There was then a further live speech via closed circuit followed by a lengthy discussion.

The projection area was the hub of the operation. In it were 4 Kodak Carousel slide projectors, 3 16mm Bell & Howell projectors, 2 Cousino continuous playing tape recorders, 3 1/4" tape recorders, 2 video playback units and a monitor and 1 TV camera. The equipment required only three operators, each handling a number of machines, to trip on and off the projectors and sound recorders for the various sequences.

In all, the equipment consisted of:

- 6 Cousino continuous playing tape recorders
- 3 16mm Bell & Howell projectors (all rear projection)
- 9 Kodak Carousels (two on dissolve set up)
- 3 video tape playback units
- 11 T.V. monitors
- 3 T.V. cameras
- 4 1/4" tape recorders
- 5 Rear projection screens.

The end result was a moving visual experience, aptly communicating the message in an atmosphere of total involvement for maximum retention. •

Hub of the presentation was the projector area containing 4 slide projectors, 3 16mm projectors, 5 tape recorders, 2 video playback units, one monitor and one TV camera.

ASPECTS OF THE MAZE—Above and below parts of the "apparently confused mass of information pertaining to the shifting social framework that it symbolized."

Univac's Southwest region salesmen are not only learning and improving their performance through audiovisuals, but are rapidly becoming experts in creating them by using several A-V techniques in making their sales presentations.

SELLING WITH VISUALS

Audiovisual presentations are created on hook and loop boards at the Southwest regional offices of Univac in Houston. Videotaping a presentation by H. R. "Hank" Malinowski is Jim Greene.

PERHAPS NO INDUSTRY today places as much emphasis on product education and training as does the data processing industry.

Virtually every sales presentation and customer training course must be tailored specifically to the customer's individual requirements.

So a computer salesman could conceivably spend all his working hours in the preparation of presentations, leaving no time for prospecting and customer contact.

The lack of training and experience in preparing and delivering professional audiovisual presentations can be a further hindrance to the computer salesman.

Yet, if Hank Malinowski has his way, every Univac salesman will become a "multiplexer" with the power of audio visuals.

The director of education for the Southwest Region, Univac Division, Sperry Rand Corporation, Malinowski is successfully "multiplying the selling and training skills of Univac representatives."

Univac's Southwest region, headquarters in Houston, is the division's largest territory, in terms of sales and revenue.

Assisted by visiting Univac systems analysts and salesmen, Malinowski has developed an inventory of several hundred audiovisual presentations, many of which are being adapted nationally.

Most can be used for internal sales training, prospect sales presentations and post-sale user educational purposes, as well as for professional group meetings and conventions.

Currently the office has a library of over one hundred hours of presentations on videotape, color slides with script manuals, overhead transparencies and "hook and loop" boards.

Partially because of a new "Man of the Month" system instigated earlier this year, the library grows each week.

As Southwest Regional Manager E. W. McCain describes him, the "Man of the Month" is a Univac salesman or systems analyst who spends four weeks in Houston assisting Malinowski in every phase of training and customer education programs.

"Inevitably," McCain relates, "he becomes so enthusiastically involved in the program that he begins writing and producing presentations himself, though he may never have done so before."

"Videotape," Malinowski declares, "has already solved dozens of presentation problems, and we are just beginning to explore its many more potential uses." For the recent 20th Annual Operations Conference of the American Trucking Association in Atlanta, Univac wanted to tell a "trucking industry success story" in its exhibit booth. There was not enough time to produce a motion picture. The solution? In two days, Malinowski and two associates had visited Gordon's Transports, a leading Memphis-based trucking firm with the only real-time computer operation in its field. They videotaped statements by the company principals, showed a dozen applications of the Univac 491 system in action, then finished editing the tape, which was

Continued on next page

selling with visuals . . .

continued

shown in Atlanta the following week.

"Obviously," Malinowski commented, "videotape also works wonders in helping salesmen to see and overcome their own poor presentation habits.

"Variety" is the word to describe the library's content.

The *Tower of Babel*, for example, is a hook and loop presentation based on the Holy Scriptures. In a humorous vein, it shows how "communications confusion" caused the tower to be abandoned before it was ever completed. "Management today," the script relates, "sometimes stops progress because he doesn't understand the language of data processing."

The "Univac Educational Portfolio," featuring the "Modular Showcase of Visuals" is a combination of presentations to provide technical orientation and academic instruction, and to raise the level of awareness of data processing potential, particularly among management groups.

Its basic purpose, a narrator explains to outside groups, is "IMAGE." To "inform, motivate and generate enthusiasm" for data processing "within your organization."

The Portfolio begins with a brief review, on 35mm color slides, of Univac educational and training materials available. These include such 16mm motion pictures as *A Matter of Time*, produced in England as a case history of British European Airways' use of its Univac 490 real time computer system.

Univac's reference library of technical manuals and books, to provide speakers with background information, is also depicted in the "Modular Showcase of Visuals."

Malinowski endorses the use of unusual visual effects to demonstrate computer tech-

Univac representatives use hook and loop boards to great effect in many of their more formal presentations.

niques. For example, he employs the brilliant flashing lights of a polarizing spinner on an overhead projector, to simulate multi-programming.

Still other presentations on hook and loop boards include "Tops," a demonstration of Westinghouse Corporation's Teletype Order Processing System, with Univac real time computers. "Data Communications" is a subject offered to customer data processing personnel.

Supporting the entire audio-visual program are published booklets. A "Brochure of Wisdom" reminds branch managers and staff personnel that "You could re-invent the wheel. But can you afford the time? Presen-

Cartoons and combination cartoon-photography are used for illustration in desk-top sales presentations produced for computer systems prospects. Presentations are often tailored for specific clients.

tations await your request."

Additional technical subjects available include "Principles of Real Time," and "Principles of Data Communications."

For management meetings there is "EDP for the Line Official," "Executive Seminar on Data Processing," and "Univac 9000 Installation Planning Guide."

Presentations for marketing purposes include "The Benchmark — A Technical Criterion," "Univac 9200-9300 Presentation," "Univac 9400 Presentation," and "A Financial Prospectus," produced primarily for corporate financial officers.

Available to the academic community are three more presentations: "Magnetic Tape Principles," "Concepts of Binary" and "Principles of Magnetic Drum Mass Storage."

Most of the Univac presentations are ideally suited to audiences of approximately 25 people. Virtually every subject presented on hook and loop boards is also available on 35mm color slides, primarily for quick reference purposes.

Audio-visual equipment, owned by Malinowski's Houston department, includes a Beseler Topcon Camera with motorized mount; the Kodak Carousel, overhead, film-

A factory caught in the "paperwork bottle" is one of the scenes in the Univac's "9200" desk-top slide presentation.

strip and motion picture projectors, a videotape recorder and monitor, screen "hook and loop" board with black light phosphorescent visual presentation ma-

"Sales Tales in Marketing Magic" recent addition to the Educational Po-

Primarily for internal sales training sometimes adapted to customer or professional audiences, "Sales Tales" begins with a demonstration of magic by Jim Taylor, Univac's New Orleans resident manager.

To guide a new Univac salesman to the right place at the right time with the idea and attitude" are a score of supplementary visual presentations covering such subjects as "Techniques in Presenting With a Slide," "Conducting Sales Workshops," "Time is Money," "Proposal Efforts Personalized," "Account Service—Your Sales Insurance Policy," "Prospecting for Profit" and "Campaign Closeout — With Crescendo."

Other training scripts with visuals include "Suspecting," a plan to help the sales analyst and sales representative organize "suspecting," rapidly and efficiently, and "Generators," a strategy plan to help the salesman "get up and get back in, when he's been the close."

Including in a light-hearted mood, "Sales Tales" invites its audiences to "open their eyes and know the score, by drinkin' a cup of the Wisdom Well, so you'll have some in your sales tale."

Recently produced were sales presentations on the Univac 9200 and 9300 systems, for desk-top viewing. Each includes a record player, with disc-recorded musical narratives on the Univac system, as well as 15-frame color filmstrips.

The soundtrack and the filmstrip, combined with cartoon art with photography, provide bright, entertaining three-minute messages for each of the Univac systems.

What kind of results has this extensive audio-visual library produced? A Univac salesman's response goes something like this: "One audio-visual presentation gave me the competitive edge to close the sale. The increased morale factor is immeasurable," states Regional Manager E. W. Cain.

EVERY BASIC INDUSTRY has both an audience and the opportunity to bring interested viewers the definitive story of its products and processes. But to attract and hold attention and interest of sizeable potential audiences, whether in schools, clubs, or television, *professionalism* in production is a "must" for such films.

For products are as basic to mankind's existence as salt. The Romans, for example, considered it so precious that they used it as currency; the Latin derivatives have come down to modern languages. Yet it is found in all oceans, is buried deep in the earth and is the only rock consumed by man!

Uttering mountains of solar salt are brought to the screen in the new 28-minute motion picture recently produced for the Morton Salt Company, a Division of Crown International. In this thoroughly instructive yet entertaining film, The Jam Handy Organization has blended the twofold appeal of scientific discovery with genuine popular appeal. Sparsely narrated, *A Grain of Salt* is far from the usual step-by-step exposition of industrial operations.

The producer's approach was to create a wide range of moods from light humor to awe-inspiring pictorial effect; the film uses startling camera angles and unusual shots — the face of a workman, whirling bits of a monster drill and the cathedral-like atmosphere of caverns of shimmering stuff deep in the earth — to enhance the viewer's appreciative interest. Narration is relegated to an understated element, with emphasis on strong visual imagery.

The rewards to Morton have already been considerable. Audience reaction noted by the national distributor; Modern Talking Picture Service, has been enthusiastic. And well it might be, for *A Grain of Salt* was a first prize winner in the Educational-Documentary category of the National Visual Presentation Association's "Day of Visuals" in New York; the film has also received the Christy Award in the Business and Industry Category at the 1968 Columbus Film Festival.

And Morton's picture was the first business film to receive an AAA rating from the Motion Picture Review Board of the Public Relations Council last year, scoring 97 of a possible 100 points!

Opening sequences of *A Grain of Salt* capture viewer attention with a whimsical touch. Under a serene blue sky, leafy trees sway in a light breeze. There is absolute silence as a white bird circles and lights. A freckled-faced youngster solemnly crawls across the grass with a salt shaker in his fist. Obviously he is testing the old adage that you can catch a fly by sprinkling a grain of salt on its tail. The scene shifts to a restaurant, catching a waiter surreptitiously tossing a pinch of salt over his left shoulder. And for the first time, audiences hear the voice of narrator Bob Cunningham as he says:

"You know, it's amazing what a grain of salt will do." The title frame emerges into the main action.

In ancient Egypt and Imperial Rome slaves

Camera crew from the Jam Handy Organization shoots a sequence of salt moving out of mine on conveyor belt.

Filming the story of . . .

SALT

A wide range of moods prevail in "A Grain of Salt." Far from the usual step-by-step presentation of industrial operations, the film successfully combines light humor and awesome pictorial effect to tell the story of salt.

Deep in a Morton Salt Company underground mine, a camera crew prepares to shoot a scene for "A Grain of Salt." The salt in this mine at Grand Saline, Texas is the gift of a shallow, warm, forgotten sea of some 400 million years ago.

salt — vital commodity . . .

continued

were traded for this precious commodity and wars were fought to get it. Roman soldiers received their "salary" in salarium argentum—salt. In some parts of Africa, we're told, it's still used as money.

Modern methods of obtaining salt are shown in subsequent sequences. To picture one of the earliest known methods, the camera moves to the scenic area around Saltair, Utah. Here, bathed in the searing sun, are Morton's evaporating ponds where the technique of solar evaporation is still used—but today, it is under the most exacting scientific conditions.

Briny water from a salt water source is pumped into the concentrating ponds in the month of May. The sun and wind do their work, impurities settle and by September the top of each pond is covered with a layer of sparkling salt crystals ready for harvest. The camera follows the processing steps now used to produce various commercial grades of pure solar salt—scientifically tested and ready to market.

A Grain of Salt also has arousing dramatic moments as, for example, the shattering explosion of blasting charges as they crumble towering walls of salt in Morton's underground mine at Fairport, Ohio—2,200 feet

down and one mile out under Lake Erie. Chunks of rock shoot out like shrapnel as blasting sequences were lensed by remotely-controlled cameras, with photographic crews only 200 feet away.

Salt mine scenes remind the viewer that counterpart diggings in Europe are so beautiful that they are used as cathedrals for worship. The cameras catch intimate glimpses of underground mine activity, so that audiences get the "feel" of being in the center of action. In subdued narration, they are reminded that salt in this mine is the gift of a shallow, forgotten sea of some 400 million years past. The sea evaporated and left these vast beds of salt which in time were buried beneath layers of soil and rock.

In this scene and in another which follows of the mine at Grand Saline, Texas, Morton had a special message to get across. Contrary to rumors out of Siberia, an underground salt mine is really a clean, pleasant place to work. Year-round temperatures average 70 to 75 degrees. The "rooms" of salt are 75 feet high at Grand Saline.

Much of the salt from a mine is marketed in bulk form to serve the needs of industry. Table salt, however, is obtained from brine wells sunk deep in the earth. Wood cuts and a clarifying animation sequence depict the complex processes of obtaining salt crystals from brine.

The film is really a two-part exposition. The second "half" of *A Grain of Salt* amply illustrates the myriad uses of salt in its many forms. Here, the production technique shifts to fast-paced, colorful material, using a quick tempo of music and professional players to show how salt and salt products help make everyday living more pleasant and healthier. To provide cinematic flow and unity, three basic characters who were used to introduce the film return in this part of the picture, appearing in amusing situations.

A pretzel maker (the player who was previously seen throwing salt over his shoulder) is pondering a weighty problem. As he taps his pretzel, the salt falls off. The narrator comments, "ordinary salt won't stick to well, will it?" As the pretzel maker shakes his head in agreement, the narrator suggests that he try something special and a huge bag of Morton Pretzel Salt appears to solve that problem.

The same character continues to stumble through a series of perplexing or hazardous situations showing the need for salt. He tries to wash his hands in hard water but can't get any suds—a water softener using salt pellets is the answer. He comes home with an armload of groceries and disaster threatens on an icy sidewalk until his concerned wife dashes out with a bag of Morton Safe-T-Salt. Dressed in a safari outfit to fend off the noon-day sun, he works in his garden but has to be rescued from heat exhaustion by a dose of Morton Salt Tablets.

Miners prepare demolition charges for blast in Morton's Grand Saline, Texas underground.

One of the scenes from the film depicts the importance of salt for ice control on city streets.

In its final sequences, the film develops the concept that salt, a keystone of modern industry where it is used in food products, dyestuffs, in automobile tires and motor oil, for paint and Simoniz, fumigants and insecticides, conditioners, aluminum, paper, cellophane and plastics. There are, the film shows, more than 14,000 ways in which salt is used to the betterment of all. And the Morton Company's research laboratories are constantly uncovering new ways to make life better and more liveable with *A Grain of Salt*.

This thoroughly informative picture is being shown in wide usefulness in upper elementary and high schools—and among the general public through service clubs and other adult groups. It is also being requested for presentation in service television showing. Free loan picture may be obtained from any office of Morton Talking Picture Service.

PRODUCTIONS, INC.**
1600 Broadway, New York 10019

Give these films a hard time and they come clean.

Prehardening is the secret of cleanliness. When KODAK EKTACHROME Films go through the ME-4 Process, they are first prehardened to prevent excessive emulsion swelling and softening. This greatly reduces skiving, scratching, and processing dirt. Result: cleaner images you can see; cleaner sound you can hear.

But that's just one advantage of the ME-4 system. Look at the outstanding family of EKTACHROME Films you get —Type 7241, a high-speed daylight film; Type 7242, a high-speed film balanced for tungsten and easily filtered for daylight; and Type 7256, a film with medium-speed daylight emulsion. All three of these camera films give excellent sharpness, low granularity, high resolution, and superb color rendition. All can be pushed a stop or two and still retain remarkable screen quality. And all are available

prestriped for single-system recording. For duplicate prints without contrast build-up, use new EASTMAN EKTACHROME R Print Film, Type 7388.

These four ME-4 system films share the clean ME-4 Process, so you can be sure of getting back clean, crisp movies that show everything you wanted to show—and nothing more. Get additional information by contacting your Kodak representative or writing to the office nearest you listed below.

Modern Marketing Offers Sales Training Series

After a year of field testing, a new and proven sales training program is now available nationally from Modern Marketing Programs. *The Successful Selling Series* consists of seven filmstrips and records, as well as leader's guides and sets of collateral material for the salesmen. Each of the units deals with one of the 7 basic elements or techniques involved in successful selling, including prospecting, handling objections, closing the sale, and time control.

The series was produced by International Salespower Institute, Inc. to provide sales executives with a proven, and easy to use, program that will: (1) Train new salesmen quickly and effectively; (2) Remind experienced men to use their selling knowledge on every call.

A number of companies in various industries have profitably used the program during the test

period and have been enthusiastic about the results.

The series is available on a sale or rental basis. For detailed information about the program and how you can obtain preview prints, write to Modern Marketing Programs, a division of Modern Talking Picture Service, Inc., 1212 Avenue of the Americas, New York, N. Y. 10036.

A Deeper Look at Life, Economy of Hong Kong

A new film on Hong Kong's life, industry and arts has been released for U.S. distribution by Caltex Petroleum Corp.

Hong Kong Horizons was premiered before 250 guests September 12 at a reception held in the United Nations Association's theatre in the Carnegie Endowment International Center in New York. Kyatang Woo, Resident Representative in the U.S. of the Hong Kong Trade Development Council stressed the growing acceptance of Hong Kong's products in international markets, and he thanked Mr. A. N. Lilley, Board Chairman of Caltex both for the interest the film will stimulate in Hong Kong and the worldwide distribution it will receive. Mr. Lilley estimated that some 25 million people will ultimately see the film, in a variety of languages.

Hong Kong Horizons will shortly be introduced abroad by a premiere in Hong Kong. Additional local premieres are planned in several of the 60 eastern hemisphere countries in which Caltex companies operate. It has also been entered in a number of major international film festivals.

In the U.S. prints of the film will be shown on television, and made available on free loan to groups through Sterling Movies, Inc.

Clever Premiere Kicks Off Head Start Film

In one of the most unusual movie premieres in New York City's history, the star of the film did not attend because it was past his bedtime, and the film opened not in New York's theatre district in the 40's, but uptown in the Spanish speaking section around Broadway and 165th Street.

Pancho is a 24 minute color film, presented by The Office of Economic Opportunity to show residents of Spanish speaking urban areas just what the Head Start Program is all about. The star of the film, five year old Frank *Pancho* Mansera, is the National Head Start Child of the Year. His story — the dramatic discovery of his serious disorder, and his subsequent amazing response to medical and educational treatment — epitomizes the desperate needs discovered among impoverished children.

The guest of honor at the premiere was the Honorable Herman Badillo, Bronx borough

president. Badillo addressed the theatre audience, briefly explaining the Head Start Program, and how it benefits the community as well as individual families.

Other notables attending the screening at the San Juan Theatre, Broadway and 165th St., were Josephine Nieves, director of N.E. Regional Office of Economic Opportunity and John Van Putten, director of the Washington Heights Neighborhood City Hall. Representing the distributor, Modern Talking Picture Service, were Richard H. Rogers, vice president, and John B. Lalley, vice president.

Distribution plans for the film include both Spanish and English speaking theatres throughout the country. In addition, 16mm prints in Spanish or English are available on a free loan basis for showings to schools, churches, community groups and civic organizations. For additional information, write Modern Talking Picture Service, Inc., 1212 Avenue of the Americas, New York, N.Y. 10036.

53 years of service to the industry

Bronx Borough President Herman Badillo (center) receives a print of "Pancho" from Josephine Nieves, director of N. E. Regional Office of Economic Opportunity and Richard H. Rogers, vice president of Modern Talking Pictures Service following the film's premiere at the San Juan Theatre.

Training Babysitters in Home Fire Safety

The first feature film on the important subject of training babysitters in fire safety is now available from the National Fire Protection Association (NFPA).

Have a Wonderful Evening uses the story technique to gain and hold the attention of the teenagers who comprise the majority of the nation's babysitters. The narrative is a vivid account of an evening at the Craig's house where a babysitter's lack of knowledge about what to do when fire strikes nearly brings disaster to the children entrusted to her care as well as to the house itself.

Dramatically proving to babysitters that they must have training to wisely meet such emergencies, the film also skillfully weaves into its story a tremendous amount of practical information. Thus it can serve as an excellent introduction to a babysitting course, or can stand alone as an effective informational film. It is especially appropriate for junior and senior high school students, from whose ranks come most babysitters, and is equally valuable to parents.

This 16-mm film in Technicolor and sound has a running time of 16 minutes. It was produced by RJ Film Communicators with technical assistance from NFPA.

Have a Wonderful Evening, available at \$165 per print, may be ordered from the National Fire Protection Association, 60 Batterymarch Street, Boston, Mass. 02110.

Clothing Selection Shown In Women's Film Series

Dressing by Design, a series of five 16mm films, provides a basic understanding of clothing selection that will enable women to see themselves objectively and create wardrobes that project their individuality.

The film series presents a popular short course that has long been a part of the Family and Consumer Sciences program of the University's Cooperative Extension Service. The material is suitable for women of all ages, physical types and coloring. The films stress a personalized approach to choosing clothing and teach how to combine the factors of shape, line, texture and color to make the total appearance a harmonious composition.

The films are *Silhouette*, 24 minutes, b/w; *Line*, 29 minutes, b/w; *Texture*, 30 minutes, b/w; *Color*, 24 minutes, color; and *Color and Wardrobe*, 29 minutes, color. They may be purchased or rented as a series or individually, and supplemental printed reference material for high school, college or adult school instruction is available.

Detailed film descriptions are contained in a brochure obtainable by writing to: University of California Extension Media Center, 2223 Fulton St., Berkeley, Calif. 94720.

Goodyear Film Shows New Packaging Materials

Goodyear Wraps It Up, a new 22-½ minute, 16mm color, sound motion picture demonstrates to supermarket and food store executives and managers how to save money and time by using proper packaging techniques in their meat and produce departments.

The film is being used in conjunction with a breakfast seminar sponsored by The Goodyear Tire & Rubber Company's Packaging Films department. It was produced by the Corpra division of Tatham-Laird & Kudner, Goodyear's advertising agency, and Victor Kayfetz Productions, Inc.

Photographed at Goodyear plants in Akron, Ohio, and in various supermarkets in Ohio, New Jersey, and New York, the film shows the making and testing of various plastic films used for packaging. The techniques used in packaging from the simple hand-wrapping process through to the use of highly sophisticated automatic packaging machines are depicted. The engineering, advisory and consulting services provided by Goodyear without charge to supermarkets is also explained.

Many sequences were photographed in supermarkets during normal store business hours while customers were shopping. The camera crews, using only available light and applying "cinemaverité" production techniques, were able to carry out their assignments without interrupting the routine of supermarket operations.

Prints of this motion picture are in the hands of the various Goodyear district offices for showing to supermarket managerial personnel. •

Plastic Reel Introduces 1" Video Tape Reel Case

The Plio-Magic shipping and storage case for 8" x 1" or 6 1/2" x 1" video tape reels assures safe transportation of valuable video

reels, and bulbs with 1500 to 2000 hours average life.

Designed for use with standard cardboard mounted 35mm color super slides, it is also available with random access and remote controls, and produces sharp, pictures and bright colors.

For additional information, write Christie Electric Corporation, 3410 West 67th Street, Los Angeles, California 90043.

Super-tough case comes in several colors with imprinting available.

Wipe-On Liquid Lengthens Life of Film and Slides

Permafilm, a wipe-on liquid that makes both color and black and white slides and movies longer lived and more resistant to damage, is available from Edwa Scientific Products Corporation.

When applied with a clean cloth to both sides of the film, the liquid replaces most of the moisture which is baked out of the film during repeated projection with an inert chemical that cannot evaporate. The treated film becomes tough, pliable and resistant to static and to fungus growth, thus preventing warping, popping, fading, static charge which attract dust, dirt and fingerprints. Permafilm toughens the emulsions side and lubricates the base side so that film is less likely to scratch.

For a free bulletin write Edwa Scientific Products Corporation, 12120 South Peoria Street, Chicago, Illinois 60643.

tape. The reel is placed on a rigid hub in the case and the cover closes tightly with a positive action locking system.

Further information may be obtained from Plastic Reel Corporation of America, 640 South Commercial Avenue, Carlstadt, New Jersey 07072.

Slide Projector Produces 4 to 8 Times More Light

The Christie Xenolite "Carousel" slide projector, Model BFL 450-46 is suitable for use in large auditoriums, theaters, rear screen projection, outdoor amphitheaters, advertising, display systems, trainers and other applications. It is one of several new series of Xenon and Mercury Arc Lamp Illuminator Systems which consist of lamphouse with optics, rectifier power supply, ig-

Model GR-2 Projects Bright Giant Images

A 2,000-watt tungsten-halogen 3 1/4" x 4" slide projector, designed for instant, extra-bright "spots" at temporary as well as permanent locations, has been introduced by Genarco, Inc. This unit, Model GR-2, plugs into regular 20-ampere outlet. The projector produces 5,200 lumens while drawing only 17 amperes of current, thus producing brighter pictures in lighter surroundings.

The Christie Xenolite Projector produces sharp clear pictures.

tungsten-halogen projector produces brilliant ad "spots".

percent of light output is maintained throughout a lamp life of 300 hours, and light distribution is unusually even.

In addition to projecting ads, the mobility of the Model GR-2 gives it application in traveling shows, lectures and display work. The use of the larger 3 1/4" x 4" slides combined with 2,000 watts of power and higher color temperatures produces brighter giant images from either a long or short row. The system is also recommended for rear projection. For further information contact Geneco, Inc., Subsidiary of Robins Industries Corporation, 15-58 27th Street, College Point, New York 11356.

Eclair Shoulder Brace Available From Gordon

A shoulder brace, designed for use with the Eclair camera, is now available from Alan Gordon Enterprises, Inc. The Gordon-Eclair Shoulder Brace features lightweight construction and even weight distribution which permits the cameraman to film for hours without fatigue. It allows him to use both hands without having to hold the camera and is designed so that the cameraman does not have to strain his neck forward in order to use

the Eclair viewfinder. The G-E Shoulder Brace is available with a 12V battery belt or quick release web safety belt.

Further information may be obtained by writing or calling Alan Gordon Enterprises, 5362 N. Cahuenga Boulevard, North Hollywood, California 91601.

Maxi-Brute Outperform Standard 10K Output

Berkey-ColorTran is producing a Maxi-Brute "6" which outperforms a standard 10K in light output and area coverage and draws less than 50 amps. Operating directly from 120 volts, AC/DC, the Maxi-Brute "6" accepts a family of 1000 watt, PAR 64 "quartz" lamps with color temperatures of 3200°K and 3400°K. PAR 64 "quartz" lamps are also available with dichroic coated lenses producing a color temperature of 5500°K. With all six 3200°K PAR "spot" lamps burning, the Maxi-Brute produces approximately 5300 footcandles at

The Maxi-Brute "6" is an ideal motion picture and television location fixture where long throws are required.

20 feet while drawing less than 50 amps. Six individual lamp switches provide for various levels of intensity without changing color temperature.

The Maxi-Brute "6" is compact, rugged, well ventilated and can be stand mounted or C-clamp

A.V.E.-HOKUSHIN 16mm SOUND PROJECTOR

UNSURPASSED QUALITY

EXCEPTIONAL FEATURES

NOW AVAILABLE FOR IMMEDIATE DELIVERY

The A.V.E.-Hokushin 16mm optical/magnetic sound projector now offers the latest advances in motion picture projection, including:

- Needle sharp picture, with f 1.4 Canon 50mm lens, micro-focussing
- Rock-steady action, with new pull down mechanism
- Easy loading, with new interlocking system
- Forward and reverse
- Single control knob, for simple operation
- Still and slow-speed operation
- Large 16-tooth sprockets
- Automatic loop restoration, insuring safe and flickerless projection at all times
- Easy portability
- Fine-adjustable claw mechanism for precise framing
- High-power induction motor, no electrical noise, no cleaning necessary
- Cinemascope lens holder available
- Modular design provides easy changeability of replacement parts
- Magnetic sound playback, with simple optical-magnetic switch
- Magnetic recording, with adapter accessory
- Remote control attachment available
- High speed rewind without switching reels
- Integrated circuit, solid state amplifier, large flywheel and top-quality ball bearings provide excellent high-fidelity characteristics
- Exciter lamp automatic compensation circuit maintains exact sound volume and quality regardless of voltage drops
- Unique lamp release mechanism permits instant change of lamps

Honeywell Elmo Dual 8 Projector Uses Any 8

Complete compatibility with all three major 8 mm films is offered in the Honeywell Elmo Dual 8 Projector, Model 330. Honeywell Photographic reports. Selective push button sprockets allow projection of either Super 8, single 8 or regular 8mm films by simply pushing in the appropriate shaft to shift sprockets to the proper format. There are no extra parts to add or remove when converting from one film format to another.

The Model 330 features automatic threading with 400-foot capacity; a control that allows the user to project forward, reverse or stop; flicker-free speed control that allows the user to vary the projection speed from slow to fast in order to insure smooth viewing. Any speed may be selected from 12 to 24 fps.

The Dual 8 Model 330 projector includes a 120v, 150 watt Tru Flector (DFG) lamp, one 400-foot reel and a dust cover. The projector is 12 inches high, 10 inches long, 7¼ inches wide and weighs 12 pounds. It operates on 110-125 volts AC 60 cycle current. For complete information, write Honeywell Photographic Products, 4800 East Dry Creek Road, Denver, Colorado 80217.

Honeywell Elmo Dual 8 is easy to operate and projects any of the three 8mm formats.

Spindler & Sauppe Markets Package Dissolve System

Spindler & Sauppe, Inc. is offering two Ultrabright Selectroslide professional 2 x 2 projectors, each capable of projecting 3000 Lumens onto a screen, with a Model 770 Dynamic Dissolve unit as a high performance package dissolve system. This team provides professional users with a great degree of operating flexibility and special effects with a high output of illumination. The system offers many exclusive features, including several dissolve speeds, reverse sequence, superimposition, fade-in fade-out, and remote on/standby control.

Ultrabright 3000 Lumen Projectors, paired with new Dynamic Dissolve, offered as package system.

The package system, designated Model 775, includes two dissolve-modified SLR-1200 Selectroslide projectors equipped with Ultrabright systems, 5" f2.8 projection lenses with remote control focus, one model 770 Dynamic Dissolve System, and one Model 773 Dynamic Dissolve Remote Controller with 25 foot cable. Other projection lenses, from 1-12" to 12", may be substituted to fit any special requirements, either front or rear projection. More information may be obtained from Spindler & Sauppe, Inc., 1329 Grand Central Avenue, Glendale, California 91201.

Concord VTR-620 Features Fast Electronic Editing

Concord Electronics Corporation has introduced a new video tape recorder with electronic editing called the VTR-620.

A push-button control on the VTR-620 provides a smooth

Pushbutton control of the VTR-620 videotape recorder provides smooth transition between scenes.

transition between scenes. This allows editing for all three types of recording conditions: (1) When the recorder is stopped or started between scenes during live recording; (2) when dubbing inserts from previously recorded tapes, films, or off-the-air recordings, onto a single tape; and, (3) when mixing live or pre-recorded tape segments on a single video tape.

The VTR-620 is a helical scan, dual rotating-head system using ½ inch video tape. It is compatible with all other Concord video tape recorders. For additional information, write Concord Communications Systems, 1935 Armacost Avenue, Los Angeles, California 9002

Mobile Lecturn Convenient for Teaching and Speaking

The American Seating Company's 745 mobile projector lecturn accommodates almost any size equipment for audio/visual presentations and demonstrations. The swing top on the lecturn provides for right or left hand operation. Quiet operating rubber casters provide easy mobility and storage. Ample storage for an overhead projector or other equipment plus three drawers for slides, tapes, films, etc.

For more information, contact American Seating, Grand Rapids, Michigan 49502.

This lecturn is made from wald-patterned high pressure plastic laminates and steel tubing for durability and easy cleaning.

AVE Offers Hokushin 16mm Optical/Magnetic Projector

A new 16mm optical-magnetic sound projector now being imported from Japan and distributed throughout the United States offers several unique features of interest to industrial film users.

The AVE-Hokushin, a joint product of AVE Corporation, New York, and the Hokushin Electric Works, Tokyo, is light in weight and easily portable, but is of thoroughly solid construction with well-tooled heavy duty parts that should provide constant trouble-free service.

Among its features are a simple switch for optical or magnetic playback sound, provision for still and slow-speed projection, and an automatic loop restoration mechanism.

Amplifier uses an integrated circuit and is of solid-state design.

Further information may be obtained from A.V.E. Corporation, 250 West 54th Street, New York City 10019.

Make Your Own Overhead Slides

Anyone with a Xerox machine can make his own slides for overhead projection by using Excello film, a product of the Sun Chemical Corporation. Anything that can be copied on paper can be duplicated on the film with no change-over from paper setting. Those using overhead projection equipment will find Excello film a convenient and inexpensive way to reproduce maps, graphs, line drawings, and the printed word to film for immediate projection.

More information is available from Custom Products Division, Sun Chemical Corporation, 681 Main Street, Belleville, New Jersey 07109.

Jack Coffey Introduces 16mm Film Cleaner

A portable, low-cost 16mm film cleaner has been introduced by the Jack C. Coffey Company. The Luxor/FilMagic Film Cleaner removes loose emulsion, dust, dirt and oils from films while they are being rewound and coats them with a silicone glaze to make them scratch-resistant and smooth. The film cleaner is placed between rewinds and the film glides over silicone tapes and is cleaned and glazed on both sides.

The Luxor/FilMagic No. 838

With an optional magnetic recording adaptor and the built-in remote control system, recordings can easily be made single-handedly at some distance from the projector, or in a sound booth.

A single control knob provides settings for forward and reverse operation and lamp on-and-off. An exciter lamp automatic compensation circuit maintains sound volume and quality regardless of voltage drops.

Loading is sure and easy, and practically foolproof with two big 16-tooth sprockets and a new interlocking system. Lens is a Canon f 1.4, 50mm, noted for exceptional brilliance and sharpness.

Both projection and exciter lamps are standard American types available anywhere. A unique lamp release mechanism permits extremely rapid change.

Service is facilitated by a modular design which permits snap-on parts to be used throughout.

The Luxor/FilMagic permits even small film libraries to clean films as they are inspected.

is furnished with 2 spools of 30' silicone-impregnated tapes which may be washed for re-use. Contact Jack C. Coffey Co., Inc., 104 Lake View Avenue, Waukegan, Illinois 60085 for more information.

Along the film/tape production line

Chicago's Filmack Studios Celebrates 50th Year

1969 marks the beginning of the 50th continuous year of operation for Chicago's Filmack Studios — one of America's pioneer film producers.

Starting as a one-man operation in 1919, Filmack has expanded in the last half-century into all phases of commercial film making: business, theatrical and educational motion pictures, filmstrips and slides; motion picture television commercials. Today, the large, modern film plant is located on Chicago's historically nostalgic "film-row" — Wabash Avenue.

Fully staffed and equipped, Filmack boasts its own still and motion picture studios, a complete full-animation department, recording studios and its own laboratory for black-and-white and color films.

Coffin/Christensen in New Seattle Quarters

Coffin/Christensen Film Productions has opened new and improved facilities with a move from 1906 East Aloha to 619 East Pine, Seattle, Wash. 98122. New telephone number is 206-325-5920.

Foster, LeMoine Form Film Partnership

Jacques Lemoine and Fred B. Foster, Jr. today announced the formation of a partnership for the production of television commercials, industrial films and documentaries.

The firm will be known as Foster & Lemoine's TVA Group, Inc. It is an outgrowth of The TVA Group, Inc. which Lemoine has operated since 1962. Lemoine will be president and Foster executive vice-president.

The new Foster & Lemoine's TVA Group, Inc. is located at 4 East 46th Street where it has

its own shooting stage and a staff which includes three film directors, three cameramen, an editor, assistant director, and supporting personnel.

Richter-McBride Opens New York Facility

The formation of Richter McBride Productions, Inc. has been announced by Robert Richter and Robert McBride, television and film producers formerly with CBS News and King Screen Productions.

The new firm, located at 15 East 53rd Street in New York City, is developing a series of television specials in cooperation with The Conservation Foundation and the Sierra Club.

Alan Gordon Distributes Elemack Spyder Dollies

Alan Gordon Enterprises Inc. has been appointed Western United States distributor for Elemack Spyder dollies and accessories.

The Spyder is expressly designed for use in inaccessible areas, making it ideal for shooting in tight corners and narrow spaces. It is ruggedly built despite being lightweight and, with the Jonathon Jib Arm Assembly, easily is converted into a dolly crane.

The Spyder is available for sale through the Gordon Sales Division in North Hollywood and for rent through the company's Rental Division in Hollywood.

Bardwell & McAlister in New Hollywood Showroom

A new showroom located at 6757 Santa Monica Blvd., in the heart of Hollywood, has been opened by Bardwell & McAlister, Inc.

Staffed by sales engineers specializing in professional motion

picture and TV lighting methods and installations, the new showroom will have on display the full line of Bardwell & McAlister lighting fixtures, ranging from the 750 w. Baby Keg to the 10 kw Big Mac Spotlight, plus the latest models of Tungsten-Halogen lights. In addition, full demonstration and testing areas will permit potential users to actually check out light output, control and balance features as well as operating features.

The new facility will also include sales and administration offices, under the supervision of John Murray, Vice President of Sales.

Westport A-V Group Relocates, Expands

The Westport Communications Group Inc., recently opened new larger offices and audiovisual studio facilities at 155 E. State St. in Westport, Conn.

The audiovisual consulting and production firm, headed by Fred Hertz and Tod Dockstader, serves advertising agencies and various industrial clients in radio and television, film, slide and filmstrip presentations and audio production.

Sandler/Shinsha Films Formed in Tokyo

Sandler/Shinsha, a joint American-Japanese production company, has been formed in Tokyo by Allan Sandler, president of Sandler Films, Inc., Hollywood-based commercial and institutional film production company.

Equal partners in the new company are Sandler Films and Tohokushinsha, major Japanese conglomerate company. The two companies have heretofore worked jointly on production of several commercials for Japanese television without a formal production company being established. *Continued on page 40*

What's in a name?

BUSINESS SCREEN is now a "Harbrace" publication . . . a part of Harbrace Publications, Inc., a subsidiary of Harcourt, Brace & World, Inc.

Much of the what, why and wherefore is explained in the 1 on the facing page. We are proud of this new association because there is indeed solid substance behind the name which means much to BUSINESS SCREEN readers.

What's in a name?

The name "Harbrace" stands for a bright new concept in business magazine publishing — *satisfying the need to know.*

The name BUSINESS SCREEN has come to be synonymous with *new tools, techniques and ideas for audiovisual communication.* Our new association with one of the nation's leading publishers of textbooks and periodicals is a source of tremendous strength and vitality to this magazine. All of our effort and expanded resources will be directed toward continuing to provide the film and audiovisual industry with the most useful, idea-sharing business publication it has ever had.

Both names have come to mean a lot! And, as BUSINESS SCREEN moves into its 31st year of service, we hope to make both mean even more.

Lon B. Gregor
Editor

A great name in publishing takes a great step in publishing.

Harcourt, Brace & World forms Harbrace Publications, Inc., a major entry in the business and professional magazine field.

Four business and professional periodical companies have combined to form Harbrace Publications, Inc. With 41 publications and 14 annuals and directories, Harbrace will reach some 704,000 readers in paper, building materials, housewares, electronics, gas, telephone engineering, food, apparel and toy distribution, plus serving management and professional needs of doctors and architects.

With the formation of this new subsidiary, Harcourt, Brace & World advances its concept of satisfying the need to know by broadening its scope to include specialized business and professional fields.

The publishers combined to form Harbrace (Ojibway Press,

Byrum Publications, Brookhill Publishing Co., and part of Haire Publishing Corp.) will maintain their present offices. The headquarters offices for the new company, Harbrace Publications, Inc., will be in New York.

By combining these companies into one, Harbrace will bring stronger support to all in marketing, merchandising and research services. Our goal is to earn an increased share of audience in each market we serve by continued upgrading of editorial, design, circulation quality and advertiser services.

Harbrace—satisfying the need to know. A great new step in publishing.

industry news . . .

continued

Sandler Films will provide a permanent Tokyo-based staff to work with Tohokushinsha's 150 executives and technicians on the production of film commercials and industrial films.

The formation of the new company is the outgrowth of Sandler's production of a series of Fujiya Candy commercials, the first commercials produced by an American company for Japanese television.

Sun Dial Shooting Navy Undersea Film

The next great adventure in exploring space will be the subject of a new motion picture by Sun Dial Films, Inc. for the Oceanographer of the Navy.

Carl V.

Ragsdale,

president of

Sun Dial, said

that his firm

has been se-

lected to pre-

pare a televi-

sion docu-

mentary

about SEA-

LAB III, the

U. S. Navy experiment in the

study of life in and under the

sea. Scheduled for the near fu-

ture, SEALAB III is the Man-in-

the-Sea phase of the U. S. Navy's

Deep Submergences Systems

Project, with the purpose of de-

veloping the technology and

equipment necessary to allow

man to live and work in the

ocean depths.

A 57½ foot-long seafloor habi-

tat, SEALAB III will be low-

ered to a depth of 600 feet near

San Clemente Island off the coast

of Southern California. teams of 8 men each will of the habitat for conse twelve-day periods. The experiment will last sixty d

The Film-Makers Name Officers During Expansion

Initial plans for a major expansion of The Film-Makers, Inc., Chicago, were announced recently by Lincoln Scheurle.

First phase, effective Jan. 1, placed Scheurle as chairman of the board; Carl J. Nelson as president; Leo Cassettari, executive vice president; Jordan Stein, senior vice president; and Dobosz, vice president and production manager.

All will be members of the Board of Directors and stockholders in the company.

Nelson was formerly executive vice president in charge of production at Wilding, Inc. Cassettari was vice president and general manager at Wilding. Bernstein and Dobosz have joined with The Film-Makers, Inc.

V.I.P. Studios Opens New Suburban Chicago Studio

V.I.P. Studios, Inc. announced the opening of a New Visual Studio at 800 East Broadway, west Highway, Mount Prospect, Illinois.

V.I.P. Studios will cater to the VIP's of the Audio-Visual Communications Industry. Offer full creative services, aerial photography, slides, film production, the production of industrial shows, sales meetings and training programs.

helpful books and literature

Printing Equipment

Copers Service Corporation offers a brochure covering an expanded line of printing equipment. New printers include the 104C, a 3000 foot, additive color version of the popular 104, and a 104C additive color contact printer equipped with a completely new lenticulated optical system. Copies of the brochure are available on request of the Sales Department, Copers Service Corporation, 1200 Grand Avenue, Glendale, California 91201.

Carousel Portfolio of Films

The new Carousel Portfolio of Films is an innovative two-part format designed for television education institutions. Capsule descriptions and data are imprinted on the body of the Folio which can be retained in a central resource file. Complete information is then duplicated on detachable cards (one for each film) which can then be filed by department heads. Included in the new 1968/1969 listing are controversial CBS social documentaries such as *In America* and *Remedy for Riot*, as well as two completely new color series on *Automotive Mechanics*, and *Farming & Sex Education for Elementary*

The Portfolio will be sent free upon request from Carousel Films, Inc., 1501 Broadway, New York, N.Y. 10036.

Merchandise

A new concept in sales catalogs for users of audio-visual equipment has been designed and produced by Behrend's, Inc. Based on the premise that a catalog should do more than just list merchandise, Behrend's has incorporated editorial and "editorial" articles aimed at explaining and educating the reader to the purpose and use of the merchandise.

Highlighted are features such as "Choosing the Right Camera", "The Story on Quartz", "Editing: The Unique Skill", "Video and the Non-Theatrical Producer" and "Your Microphone".

A 108-page catalog can be obtained, at no charge, by writing on your company letterhead to Behrend's, Catalog Department, 161 West Ave., Chicago, Illinois 60611.

about Filmmaking

Many of the advanced techniques available today's movie-makers are described in 170 films which are listed in a new booklet, "A Filmography of Films about Filmmaking and Move-Making." The booklet was edited by Robert W. Wagner and David

L. Parker of the Department of Photography and Cinema, Ohio State University, for teachers of photography, movie-making, and cinematography.

Included in the listing are technical films on the mechanics of splicing, editing, panning, set construction, and animation, as well as historical films and descriptions of directing and the nature of the film medium.

Under study in individual films are such topics as the flashback and flashforward techniques employed by Orson Wells in "Citizen Kane;" preparation of drawings-in-motion by Walt Disney; the effectiveness of "sight gags" perfected by Keaton, Turpin, and Laurel and Hardy; unedited films from the television series "Gunsmoke;" voice-sight synchronization methods; and hundreds more.

The 12-page listing, which is arranged alphabetically and contains brief descriptions of each film, also tells where they can be ordered.

Single copies of the listing (No. AT-26) are available free from Dept. 454, Eastman Kodak Company, 343 State Street, Rochester, New York 14650. Quantity prices are \$1.00 for 10 in multiples of 10.

Film and Supplies

Superior Bulk Film Company has just published a 64-page catalog designed especially for the industrial movie maker.

A special 24-page section is devoted to "do-it-yourself" processing of black-and-white or color motion picture film. This includes film, equipment, chemicals, formulas and instructions.

Superior Bulk carries a complete selection of film of all types and speeds for 8mm, Super 8 and 16mm camera owners. Film is available with or without processing. Sound striped film is also available.

Also shown in the catalog are editors, titlers, lights, sound equipment, camera, projectors, books and film subjects.

A copy of Catalog 690 can be obtained by writing to Superior Bulk Film Co., 442 N. Wells St., Chicago, Ill. 60610.

Details on Nagra IV

F&B/Ceco Inc. is offering a free, illustrated brochure and price list describing the Nagra IV line of portable, synchronous tape recorders. The booklet includes accessory information as well as a thorough description of the Nagra IV's new features.

Many of the changes in the Nagra IV are refinements of the existing features found in the world famed Nagra III.

The brochure can be obtained free of charge from Ron Groen, at F&B/Ceco's main office, 315 West 43rd Street, New York, N.Y. 10036.

A Name with a Purpose

The objectives of Comprehensive Service Corporation are, as the name implies, to render the most comprehensive and satisfying service, with complete understanding of the needs of all who require motion picture equipment, accessories and supplies.

We point with pride to our long list of large and small customers all over the world, who have been coming to us, again and again, over the many years. Our ever expanding business is proof of their confidence in the quality of our products, our dependability and expert knowledge.

Comment

Letters from readers

Gentlemen:

We wanted to enter a film in the American Film Festival listed in your January issue, but couldn't find an address. Can you help?

B.K.
Chicago

► *Certainly . . . with apologies for omitting it. Write American Film Festival, c/o Educational Film Library Association, 250 W. 57th St., New York, N.Y. 10019. The 1969 coordinator is Mrs. William (Esme) Dick.*

Gentlemen:

The 1969 Atlanta International Film Festival is June 16-21, not last year's date of April 8-13 as printed (in January issue). Further, there is no Eastman Award or any connection with the good people at Eastman Kodak as implied. Also the closing date for entries is March 31, not February 15. This has caused mass confusion.

J. Hunter Todd
Executive Producer
Atlanta International
Film Festival

► *The data for the Atlanta International Film Festival should have read as follows.—Editor*

THE SECOND ANNUAL ATLANTA INTERNATIONAL FILM FESTIVAL

Atlanta, Ga. June 16-21, 1969

MANAGEMENT: J. Hunter Todd, Executive

Producer. Mailing address: Drawer 13258K, Atlanta, Ga. 30324. Phone: (404) 633-5011. Cable Interfilm.

SUPPORTING GROUPS: "Forward Atlanta" (Atlanta Chamber of Commerce); The Atlanta Arts Alliance; Eastern Airlines (official airline).

ENTRY DEADLINE: March 31, 1969.

CATEGORIES: Feature motion pictures, Documentaries, Television commercials and Experimental films. Films and television programs in format from 70mm, 65mm, 35mm, 16mm and videotape (compatible to VTR 2000) accepted.

AWARDS: The Golden Phoenix is the grand award of the Festival, with Silver Phoenix awarded in category; a \$500 cash prize awarded for the best student film.

SCREENINGS: Screenings of award winning films are held in the new Atlanta Arts Alliance Center.

Gentlemen:

In looking over the "1969 Film Festival Planning Guide" in January's BUSINESS SCREEN, we are concerned that the American Foundation and Employment Film Fair is not listed. May we ask why this omission occurred?

Michelle Bender
Publicity & Information
Director

► *Until your letter, we were unfamiliar with the details of the Film Fair which will be held for the first time this year. It of course should have been listed as follows.—Editor*

AMERICAN FOUNDATION ON AUTOMATION AND EMPLOYMENT FILM FAIR

May 21-22, Hotel Americana, New York

PURPOSE: To spur the campaign for job training for minority youth and the hard-core unemployed. The Center for Information on Job Training and Development of the American Foundation on Automation and Employment initiated the Job Film Fair to provide information and organizations with a concentrated effort to insure the best job development techniques available on film.

CATEGORIES: Films will be judged and awarded for the highest quality films produced by (1) industry, (2) education institutions, (3) commercial film companies and (4) those which best convey a sense of group pride and/or evoke a better understanding of the ghetto situation.

INFORMATION: Additional information details about the Job Film Fair are available from the American Foundation on Automation & Employment Film Fair, 452 5th Ave., New York, N.Y. 10018.

Gentlemen:

We did not receive an issue #8 for Volume 29 of BUSINESS SCREEN although we received the January issue for the next issue.

Ruth Seelhamer
Crosby Library
Gonzaga University

► *Because of our monthly publishing schedule which began in January, we eliminated the #8, 1968 issue which was to have been published December 30 . . . the same time as the January issue. All subscriptions were appropriately extended to compensate for the cancelled issue.—Editor.*

PHONE

(202) 347-1717*

(305) 949-4252*

Many producers know our phone numbers by heart. They dial them regularly. Most of them want to know how their jobs are progressing. Many want technical advice. A few worry... but that's part of this business, too.

"I've got a special show," you say to yourself. "What can Capital Film Labs do for me?"

The answer is quite simple. At Capital, our Customer Service Department is staffed by men with more than 15 years of experience—who understand your needs and problems. And they know that what you say—you mean.

They coordinate your work with Production Control—to meet your deadlines with quality prints you'll be proud of.

So dial our numbers. It's a lot better than worrying.

TOOLS, TECHNIQUES AND IDEAS FOR AUDIOVISUAL COMMUNICATIONS

MARCH • 1969

PART ONE OF TWO PARTS

No westerns. No mysteries. No epics.

But our film program gets the highest rating in television.

Not from Nielsen or Arbitron. But from the hundreds of companies and television stations all over the country who enjoy the benefits of our sponsored film distribution program.

Last year, 289 companies who wanted to reach millions of viewers turned their films over to Modern TV. And we booked them to 788 television stations in the U.S.* that broadcast informative free films to supplement their regular commercial programming.

Result: at year's end, our clients' films had been seen on television 54,732 times.

To attract such tremendous viewer interest, these stations need a broad range of subjects — sports, travel, science, home economics, and agriculture, to name just a few. They also need films in a variety of lengths — everything from a one-

minute shortie to a half-hour series — to fill openings in their program schedules.

And they know that Modern TV's incomparable service more than meets their needs.

Modern offers them the largest and best selection of sponsored films available.

We maintain a network of six U.S. TV libraries in major cities to provide fast, personalized service.

Because the needs of stations vary widely, a full-time Modern staff of regional field representatives calls on them regularly to ask about special free film requirements.

And to stimulate film usage all year long, Modern sends out a steady stream of catalogs, brochures, film lists, and special mailers.

Does all this sound like your kind of program? Give us a call. We'll put *your* favorite film on TV.

*Canadian distribution also available.

MODERN TALKING PICTURE SERVICE, INC.
1212 Avenue of the Americas, New York, N.Y. 10036

Modern is the world's largest distributor of sponsored films to Community Groups, Schools, Television, and Theaters, serving sponsors through 34 U.S. and Canadian film libraries.

Sure, you've got some great sales films. But how do you get your salesmen to show 'em?

With the Technicolor 1000—of course.

Sales films really sell. But who likes to use 'em? No one. Not with all the complicated, heavy equipment you have to cart around. That's why the Technicolor 1000 cartridge-loading Super 8 movie projector makes a big hit with salesmen. It's 19 lbs. light. Just snap in the sound film loop cartridge (with up to 29 minutes of film) push the "go" button and the show is on. No threading, no rewinding. Why don't you look into converting your current sales films to Super 8 sound film loops. It's surprisingly inexpensive. Just contact Technicolor. We'll help you put your films on the road!

Calvin Productions Now Calvin Communications

With Calvin Communications the new name selected for Calvin Productions, Inc., the Kansas City headquartered motion picture firm has renamed its various facilities. The announcement was made February 3 to more than 800 film makers attending the opening session of the 23rd Annual Calvin Workshop by Calvin President Leonard W. Keek.

The change will effect all Calvin locations which have been renamed Calvin Productions — Kansas City; Calvin Laboratories — Kansas City; Calvin Packaging — Independence (Missouri); Calvin Productions — Louisville (formerly Vogue Productions); and Calvin Productions — Philadelphia (formerly Calvin-De-Frenes). Nearly 500 persons are

employed by Calvin at the various locations. The corporate mailing address remains 1105 Truman Road, Kansas City, Mo.

According to Keek, "Calvin corporate names aren't actually as critical in a service organization as our people and our products. However, the names are being changed to obtain additional public continuity and consolidate an extended operation. We feel the changes will serve our own best interests and will help us better identify ourselves to the industry."

Keek also emphasized that there would be no other changes within the organization at this time. The company will continue to operate as it has in the past, placing strong emphasis upon quality products, expert service and future growth and expansion.

4-H Film Selected for Russian Exhibition

Governments of the United States and the Soviet Union have chosen a 4-H film made by a North Carolina producer for exhibition to the Russian people next summer.

Joe Tonkin of the 4-H office of the Department of Agriculture informed Walter J. Klein Company, Ltd. of Charlotte that their 1968 film, *Joe M. Day, 4-Her*, had been selected as part of the Education U.S.A. presentation of the United States Information Agency in Moscow opening July 30 this year.

The half-hour motion picture documents the 4-H life of young Joe Day of tiny Nebo, Kentucky, now a student at the University of Kentucky and married to the girlfriend in the film.

The film reveals the close relation between land grant colleges and universities and teenagers like Joe Day working in their local 4-H clubs. This appeared to the Soviet judges to be one of America's strong points in the field of education.

The motion picture was produced by the Klein firm on a grant from J. I. Case Company, the farm machinery maker.

U.S. Industrial Festival Names Board of Advisors

The U. S. Industrial Film Festival has announced the appointment of its 1969 board of advisors according to J. W. Anderson, chairman for the international event. Bringing to the board a wealth of knowledge

SERIES 2500

MODEL 250

SERIES 900

SERIES 2200

MAGNASYNC SOUND EQUIPMENT FOR MOTION PICTURES & TELEVISION

MODEL 2300-R SOLID STATE DISPLACEMENT RECORDER — makes single system editing possible. Automatically re-positions the sound track of a processed 16mm single-system release print film to "editors sync" . . . sound and corresponding picture "in line" . . . for rapid, accurate editing, and then automatically re-positions sound track to "printer's sync" or "projection sync" for immediate projection. The unit may be interlocked with other magnetic film recording equipment and projectors including conventional TV chain projectors. \$2350.00

MODEL 230 MIXER — NAGRA COMPATIBLE SOLID STATE MICROPHONE MIXER — Specifically designed to conform to the input characteristics of the Nagra ¼" tape recorder, with special consideration given to their aesthetic compatibility. \$395.00

SERIES 2500 SOLID STATE TRANSFER SYSTEM — 16mm, 17.5mm or 35mm synchronous magnetic film. Unit consists of a heavy-duty quarter-inch magnetic-tape reproducer, a solid state sync pulse amplifier, and a sprocket magnetic film recorder reproducer, all mounted in a single rack cabinet. This system is capable of transferring a pre-recorded quarter-inch tape to sprocketed film without tying up the field recorder. From \$3995.00

SERIES 2200 SOLID STATE PORTABLE RECORDER — for 16mm, 17.5mm or 35mm synchronous magnetic film. Utilizes Magnasync Transport Mechanism. Available with all standard film speeds and voltages for complete international compatibility. Extremely versatile input switching circuits allow use of three low or high level microphones and line, or up to four line inputs. Input and output transformers on all channels for complete isolation and minimum noise. Modular plug in construction. The unique "quick slip" head cover permits sync marking directly over head gap. From \$2225.00

MODEL 250 — SOLID STATE PORTABLE FOUR CHANNEL MICROPHONE MIXER — is designed for motion picture sound recording and remote broadcast transmission. The high level mixer features dialogue equalization on each incoming channel, master gain control, built-in microphone talk-back system. Versatile input circuitry allows various combinations of microphones and lines (high & low level) to be mixed. Portable. Self contained rechargeable batteries provide economical operation where A.C. power is not available. \$795.00

SERIES 900 SOLID STATE STUDIO MIXING CONSOLE — Features non-obsolete solid state circuitry, modular construction. This unit is capable of fulfilling the requirements of any studio . . . large or small. Other special features include up to 12 microphone or line inputs, complete 6-position equalization with echo send and cue on each input channel, up to 4 program output channels with large illuminated VU meters and echo & cue channels as required. \$4150.00

SERIES 2400 "ALL-IN-ONE" SOLID STATE PORTABLE RECORDER — for 16mm, 17.5mm or 35mm synchronous magnetic film. A quality, lightweight, sound system for the "on-the-go" producer who wants to minimize set-up time. Recorder is also adaptable to standard rack mounting. From \$1795.00 (not shown)

industrial motion pictures are Peter D. Crane, Interama; Jerry Curto, Jr., Santa Fe Railroad; Ira Eaker and Allen Zwerdling, Back Stage Publications; Marv Gold, Film Design; Lon B. Gregory, Business Screen; John P. Grember, United Air Lines; W. R. Terrell, American Oil Company; Robert B. Konikow, Advertising & Sales Promotion Magazine; W. Ray Hyde, Public Relations Counselor.

Prominent industry film distributing firms are also represented by Dan Kater, Modern Talking Picture Service, Inc.; Frank J. Havlicek and Gordon Hempel, Sterling Movies, Inc.; and Joseph Liebich, Association Films.

The festival highlights the industrial film and its effectiveness as a modern communications medium by providing worldwide producers, sponsors and distributors an opportunity to showcase their productions. In last years event, films were judged from six nations with winners represented by films from England, Canada and the United States.

"The appointment of these men assures highly qualified leadership of the festival for the 1969 season," Anderson noted. He stated, "We are pleased to have the recognition of the Chicago Film Council and Chicago Unlimited. Both organizations have long strived for the continued development of the film industry."

Films produced throughout the world are invited into the competition. Information may be obtained by writing U. S. Industrial Film Festival, 333 North Michigan Avenue, Chicago, Illinois 60601, U. S. A. or cable FILM-FEST.

all shares owned by Jack C. Coffey, sole stockholders of the company bearing his name.

Founded twenty years ago, Jack C. Coffey Co. has been profitable throughout its history. The company supplies recording equipment, storage units and other products used to operate libraries of films, transparencies, tapes and similar audio-visual materials.

Other divisions in the Esquire Education Group are Corcoran Films, Globe Textbook Company, a publisher of school textbooks and supplementary books, Rapid Film Technique, a rejuvenator of films. The parent company also operates a Publishing Leisure Group (*Esquire Gentlemen's Quarterly* magazines, Scott Stamp Publications and Hudgeons E-Z Products), Lighting Group (Wide-Lite, Lite, Hadeo Products, and Right Lite), and an Electronics Instrumentation Group (Process Analyzers, Inc.).

The Jack C. Coffey Co., will operate as an autonomous unit within the Education Group. It will retain its present headquarters location in Waukegan, Ill., a suburb of Chicago. The firm's personnel will remain the same but with a realignment of duties. Jack C. Coffey was named chairman of the board. John Kroll has been promoted to president. Elected Vice President were H. J. Phillips, in charge of marketing and sales, and Robert A. Krueger, financial affairs. James C. Moran is assistant sales manager.

Hollywood Video Center Expands Audience Studio

Hollywood Video Center, the largest independent videotape facility on the West Coast, will expand and renovate its audience studio at a cost of \$110,000, according to HVC executive president Richard Gottlieb.

The major elements involved in the project include the addition of 350 square feet to the stage area; expansion of audience seating capacity from 175 to 210; new seats, carpets and wall decor; new scenery storage area; a new prop room; and new stage doors large enough to permit entry of vehicles.

Jack C. Coffey Co. Acquired by Esquire, Inc.

In a move designed to broaden its position in the educational audio-visual field, Esquire, Inc. has signed a purchase agreement calling for the acquisition of the Jack C. Coffey Co., Inc.

The Coffey organization, a major supplier of equipment and materials for school audio-visual materials libraries, has been acquired for an undisclosed amount of cash. Under terms of the agreement, Esquire purchased

YOUR FIRST FOOT IS FREE

A foot in the hand is worth two talked about in an ad. That's why we'd like to send you an actual foot-length sample of Metro/Kalvar's B & W motion picture print stock. Then you can see why our film is so different—and so superior.

Take our emulsion, for example. We don't use expensive silver suspensions—prints on our "silverless" stocks can save you quite a bit of change over conventional films. The emulsion is tough saran plastic coated on a base of high strength, dimensionally stable polyester and is highly resistant to scratches, environmental changes and mechanical stresses.

Our films are dry-processed in normal room light — no chemical solutions of any kind are required. A latent photographic image is formed by exposure to ultra-violet light. Heat application permanently develops the image.

Metro/Kalvar's film is so different—you have to see it to believe it. Just a snip of the coupon will bring you that foot-length sample. Why not send for it TODAY?

METRO/KALVAR, Inc.

Forman Resigns, Steadman Heads Berkey-ColorTran

Milton Forman, president of Berkey-ColorTran, Inc. and Berkey International and vice president of Berkey Photo, Inc., has resigned. This has been done to fulfill his personal plans which he will announce later.

Benjamin Berkey, president of Berkey Photo, announced also that Loren E. Steadman, formerly manager of television systems for General Dynamics-Convair division, has been appointed president of Berkey-ColorTran. Steadman joined Berkey-ColorTran in 1968 as executive vice president and general manager.

Joseph Katz, managing director of Berkey Technical (UK) Ltd., will assume the responsibility for the management of Berkey International (Europe).

Chicago offices, sound stages, film laboratories.

Kater Heads Modern's Sponsored Film Division

Guilford C. (Dan) Kater has been appointed head of the sponsored film division of Modern Talking Picture Service, Inc., according to Carl H. Lenz, president of the company.

The position of division head is newly created and places Kater in charge of both sales and library operations for sponsored films.

Kater was formerly vice president in charge of Modern's West Coast sponsored film sales office in Chicago. His new office is Modern's New York City headquarters.

The 39-year-old executive began his career with Modern in 1953 as manager of its Cincinnati film library.

Eigen Heads Modern's Minneapolis Library

Modern Talking Picture Service, Inc. has appointed C. D. "Ike" Eigen manager of its Minneapolis, Minnesota film library.

KATER

ANDERSON

Wilding Names Two to Vice President Posts

James C. Vivian has been appointed vice president of Wilding, Inc., marketing-communications subsidiary of Bell & Howell.

He will be based at the Detroit headquarters office (18000 West Eight-Mile rd., Southfield) with responsibility as account supervisor of Wilding services for Ford Division of Ford Motor Company.

Robert J. Dunphy of Mt. Prospect, Ill., has been appointed to the new position of vice president and controller in the management restructuring.

Included in the announcement by Frederic W. (Fritz) Overesch, chairman and president, was that Dunphy will be based at the historic Essanay Studios (1345 Argyle ave.) which house Wilding's

Pelican Names Anderson Executive Vice President

Thomas Anderson has been appointed executive vice president, Pelican Films, Inc. Previously, Anderson headed Pelican Films of California, as vice president.

A New Yorker, he joined Pelican in January, 1966, to establish the West Coast operation, now a successful and growing facility. After remaining there for three years, during which time he also served as a film director, Anderson has returned to the company's main offices to this new position, which has been created by the firm's expansion.

Michael McCoy, head of sales and production manager,

promoted to vice president in charge of Pelican Films of California, Inc. Before joining Pelican, McCoy was a producer with MPO and VPI in California. He also is a helicopter pilot in motion pictures.

Hoeganaes Corp. shifts to Da-Lite® Jr. Electrolite® slide & movie screen.

Among other things, the Hoeganaes Corp. of Riverton, New Jersey makes shifty little gears for automatic transmissions—and they make good ones. So, naturally, when they decided to get a fully automatic projection screen, they selected Da-Lite.

They selected a famous electrically operated Da-Lite screen (there are 4 models in all) because, it's de-

signed for easy installation on wall, ceiling or within the ceiling. Sizes 50" x 50" thru 20' x 20'. The screen was purchased from Williams, Brown & Earle, Inc., Phila. Write Dept. B. S. for the name of a Da-Lite Audio-Visual specialist near you.

DA-LITE®

Da-Lite Screen Co., Inc. • Warsaw, Indiana 46580

Get a Graflex 16.

Before you put your money on one of those automatic loading projectors, consider!

You may spend a few more seconds loading our Graflex 16, but it won't cut, chop, or tear your film to ribbons . . . the way those "lightning" loaders are all too apt to do.

You want to show films in a bright room one day, a dark room another? With an automatic loading projector, you'd need to change bulbs. With the Graflex 16, you push a button. Our two-stage brightness control gives you the light intensity of your choice . . . equivalent to 750 to 1000 watts.

How about that old print? The one that's worn and ragged and has lots of splices in it? The competitive projectors run roughshod over it. Our Graflex

16 goes easy . . . adjusting automatically to the film's thickness so as not to hurt the film or interrupt your showing.

More? You want quiet operation? We offer a silencer. Hate over-heating? We have a special cooling mechanism. Wonder about lens quality? Remember, we're Graflex, now part of the Singer Company, and have been making the world's finest optical systems for still cameras since before you were born.

Don't succumb to the easy lure of automatic loading until you compare all the features of the Graflex 16. Ask your Graflex dealer for a demonstration.

A Graflex 16 projector didn't just happen. We made it that way.

Helping Them Win in Las Vegas

LAS VEGAS IS NOTED for attempting to show their visitors a good time—it's that kind of city. And, the main attraction is gambling, even though the majority of the visitors are unfamiliar with the various games. To orient tourists to gambling and the most common games played in Las Vegas, hotels and casinos have gone to great lengths to indoctrinate visitors. Casino tours and brochures in each hotel room have grown to be part of the public relations packages used by the various casinos and hotels to familiarize visitors with the rules of the various games.

The Mint Hotel in downtown Las Vegas (a Del E. Webb Hotel), an innovator of other popular tourist attractions, the management has come up with another new way of orienting visitors to the main attraction—gambling.

It became obvious that even with the brochures and helpful personal instruction, that many of the people in the casino were still unsure about how to play many of the games. Bob Plummer, director of advertising and promotion at the Mint, working through W. R. McLain & Associates, contracted Richard J. Soltys Productions to produce a show outlining the basic fundamentals, odds, options, methods and techniques of the three major games — Roulette, Blackjack and Craps. Working with Writer Ed Woodworth, Soltys

Productions came up with a sound slide show to do the job.

Winning Fundamentals of Blackjack, Roulette and Craps is shown to the majority of the eight thousand persons who monthly take the "Behind-the-scenes" tour of the Mint — a tour where one feels like an insider as he sees the money counting rooms, slot machines being repaired and peers surreptitiously through one-way mirrors in the ceiling above the casino.

The show is presented on a Montage Narrator, a self contained projector-amplifier, playing a continuous ¼ inch tape cartridge. At the end of the presentation, the audience is invited to get the feel of the games by practicing on demonstration tables in the room, and with chips given each member of the audience for play in the casino.

"The operation of a gaming casino is one of providing a service for our customers," says Plummer, "and it is our sincere desire that everyone who enters our hotel or casino have an enjoyable time. The *Winning Fundamentals of Blackjack, Roulette and Craps* assists us in this function beyond our expectations."

RIGHT—Scenes from the filmstrip portray all aspects of casino and night life at Las Vegas' Mint.

THE NOTEBOOK'S BEST FRIEND.

They'll retain more if you leave the lights on during film showings so they can take notes.

With the new MARC-300* version of Bauer's workhorse P6 projector, you can show brilliant, true-color pictures in full room light—or even daylight—in even the largest size room! Because the P6 automatic-300's metal-arc lamp puts out more than four times the light of conventional projector lamps.

The P6 automatic-300 projector also gives you 15-watts of optical and magnetic sound amplification (powerful enough to be used as a

p. a. system), automatic threading and optional 4,000-foot capacity.

The P6 is your pocket-book's best friend, too: as low as \$1650, with a sharp 50mm f/1.3 lens (other lenses from 25mm to 75mm optional). Accessories include microphone for p.a., reel rewinders, splicer, extension cord.

See your dealer or write to Allied Impex Corp., 300 Park Ave. S., N.Y. 10010
Chicago, Dallas and Glendale, Calif.

What's new in free film distribution?

Ask the man from United World.

Everything about marketing today is getting more sophisticated, and free film distribution is no exception. In fact, it's probably one of the fastest-changing areas of all right now.

So much so that it's almost an entirely new ballgame. You simply can't rely on yesterday's techniques, no matter *how* successful they *used* to be.

How do you get the most out of today's new film distribution systems? Start with a distribution expert like the man from United World. He knows what's happening because he's been in on most of these new techniques right from the start. When you're part of the MCA-Universal family, innovation is a way of life.

For example, he'll tell you about some of the new pre-distribution evaluation techniques available

today, to help you map out more effective reach-and-frequency programs... estimate costs-per-viewer more accurately...

and even help determine—in *advance*—exactly how thoroughly your new film is likely to hit that target market!

Of course, some things about film distribution *haven't* changed, and he'll tell you about those too. Things like taking proper care of each of your prints so that he can get the most mileage from it for you, at the kind of low, low costs that make corporate controllers smile.

Why not ask him in for a no-obligation chat? Whether you're planning a new PR film, or simply want to make sure that your present films are getting through to the right audiences, you'll find it really pays to ask the man from United World.

How Houston's A-V Corporation Handles

MOTION PICTURES OF THE MOON

IF YOU FORGOT about the merciless deadline, the kind of problem that faced Robbins on January 15, 1969 involved an editor's dream assignment — if you were the right editor. Robbins is Vice President for NASA Production of Houston's A-V Corporation, the prime motion picture contractor for the Manned Spacecraft Center. His problem was this: in the midst of moving his entire production facility to a new location, his veteran film editor, Brian Beasley, who had previously put together five highly successful NASA flight reports, was going. And the film Beasley was working on contained some of the most exciting and unprecedented documentary footage ever taken — the historic Apollo 8 lunar photography taken by astronauts Frank Borman, Jim Lovell and William Anders. The 22-minute motion picture, titled *Apollo 8—Go For TLI*, was to be released in Washington for a private screening for President Nixon and selected members of Congress, then hand carried by Colonel Frank Borman, to all the capitals of Western Europe. Robbins knew it was the kind of film that would be translated multilingually by the U.S. Information Agency and projected hundreds of times on television and on movie screens all over the globe. It would be viewed by millions, studied by students, savored by scientists and, finally, vaulted for glory as the first close-up motion picture taken by man of what Percy Bysshe Shelley referred to as "that orb'd maiden with tresses of fire laden, whom mortals call the moon."

Robbins also knew exactly what the press would be on any pinch-hitting editor he selected. Back in the 1950's, before becoming Writer-Producer-Director for the University of California's Los Alamos Scientific

Laboratory, he, himself, had both photographed and edited films on Eniwetok H-bomb tests that had to be rushed to the White House three days after H-hour. The Apollo 8 pinch-hitting job was an editor's dream assignment, all right, if you had the right editor.

That man, in Robbins' view, was a brown-eyed, wiry, 37-year-old film editor from Saint Louis named Richard Atwell. "Rich" was quiet, soft spoken, and had cranked reels long enough to have developed the arm and shoulder muscles necessary to press nearly his own weight, 162 pounds.

Just after lunch, when Robbins walked into Atwell's windowless cubicle, he was relieved to see that all his essential equipment had already been unloaded and plugged in.

"Rich," he began, "That disc in Beasley's back has jumped out again. He can hardly turn a crank. Besides he's got the flu. He's trying to work with a temperature of over a hundred. I've got to send him home. I hate to ask you. We interlock in four days. Can you take this on?"

Rich Atwell knew the lunar mission work prints were now in house, that the pocked and pebbled face of the moon had come through with sharp clarity and that the master print, handled only with white, cotton mortuary gloves, was waiting in the wings—spotless, dust free, waiting for an editor to decide precisely where the sharp, little steel guillotine with that familiar squeaky-scraping sound would neatly slice the strips of celluloid. And somehow, between luck and overtime and humming reels and a hungry and sometimes desperate memory for a right scene—close or closer—and a just right sound—bugle or bach—a motion picture would result.

When Atwell took over from Beasley three

armloads of reels and 54 takes of sound track, it was Wednesday at 1:54 P.M. The narrated and scored interlock with the Manned Spacecraft Center's taciturn director, Dr. Robert Gilruth, was already set for 9:00 A.M. Monday morning—an appointment, Rich Atwell knew, that was irrevocable.

After transferring his stock, he sat down and read the script. Scene 1 called for an early dawn shot of the poised Saturn V rocket as narration established "December 21, 1968. The shortest day of the year. But in significance, perhaps one of the longest in the flow of history." So far so good.

In researching the 37 page script, A-V's

Film Editor Rich Atwell checks footage of Apollo 8 flight for the film "Apollo 8—Go for TLI."

In eight months, Baldwin Baker exposed a million and a quarter feet of 16mm film for ABC TV.

That's 7,000 feet a day, five days a week. All on location, sync sound, with one camera.

Mr. Baker needed a camera that was quick to operate and, above all, reliable. He used an NPR.

Baldwin Baker writes: "*Everybody's Talking* is an ABC Television show that really eats up film. In the first eight months of shooting, we regularly exposed between fifteen and twenty 400 foot rolls a day. In 35mm, that would be over 20,000 feet a day. All lip sync, of course, and all on location—very often three or more separate locations on the same day."

"Short film clips from our filmed footage of people talking about an unidentified subject were screened in the studio for a live panel, who had to guess what the people were talking about. Because we could never tell how long it would take the panel to guess the subject and because the people doing the talking were mostly non-professionals, we had to shoot literally miles of

film to get good tangle quotes and to make sure there would be enough footage to keep running clips until a panelist finally guessed right. We used so much film in fact, that more than Eastman's Hollywood ran completely out of black-and-white rawstock. "With travel between locations and a shooting schedule like that, you can im-

man in the photograph, is a member of the IATSE Hollywood local 659; and that's his NPR.

Camera makers since 1909

films of moon shots...

continued

Writer/Producer Don Wiseman had listened to or read every word of the six-day-long Mission Control voice track, or real time dialogue that had seemed to emanate from the very walls and ceiling of the MSC press room. In addition, he stayed up or got up for the wee hours' burns when the precise firing of a rocket engine a quarter of a million miles away was crucial not only to the mission but to the lives of three men as well. Wiseman, who had a free hand from the beginning, first felt the mood of his picture late one night when he wandered into the nearly deserted press room. Since he worked with and knew all three astronauts intimately, he instantly recognized Borman's voice from the moon coming to him out of the walls. As Borman chatted, almost idly, with Jerry Carr in Mission Control, astronauts Lovell and Anders slept as their spacecraft circled the moon.

"What's the weather like down there," Borman asked in a casual tone that Wiseman thought also had more than a hint of loneliness in it. Carr said it was a pretty night and that the moon was out.

"A nice time for Christmas," Borman said, "Nice weather for Christmas."

"It struck me then and there," Wiseman recalled later, "that it was basically a mood picture. Here were three men, three ordinary family men sounding casual and maybe even corny and feeling lonely at times right in the middle of a truly epic journey of modern man. And there is nothing wrong with that kind of corn anyway. And here they were, at a time we needed it most, giving us a mission that captured the human spirit and reminded man of what he is, or, maybe, what he should be, or can be."

Later Wiseman decided the mood and the picture would be strong enough to build up

to a close with Borman's prayer from space, "And show us what each one of us can do to set forth the coming of the day of universal peace, Amen."

And Wiseman thought it would be a natural "to come up over that with a fugue, a very precise form of music. It had been a very precise mission, and what is more precise than Bach, the Hemingway of composers? It's precise but it's almost a spiritual thing."

Much of what Atwell set out to do next was typical of A-V's normal support of MSC's requests for training films, engineering film reports, films for television and other specialized films.

A few individuals in NASA's top management, fortunately, are very audiovisual conscious and use film extensively both externally and internally. Dr. George Mueller, the Associate Administrator for Manned Spaceflight, for instance, once told a group of U.S. Senators, "As you can see, it probably is more effective to use a film to describe the status of our program than anything I could possibly say in terms of words."

Individual astronauts also often request special film clips from A-V as an aid in scheduled speech appearances. Producing any type of film for such enlightened management is usually a highly desired challenge for film makers, but production of a major mission film, such as that of Apollo 8, involves some unique problems.

For one thing, during the entire six-day lunar journey, virtually every word spoken from space, from world-wide tracking stations and from Houston's Mission Control is recorded on 30 separate sound tracks on a single strip of 70 mm magnetic film. The tracks had stayed open day and night for the entire lunar journey—146 hours, 46 minutes.

Commander of the Apollo 7 flight, Navy Cap Walter Schirra, Jr., and A-V's Don Wiseman review some of the film narration Schirra is doing for the Manned Spacecraft Center.

Before Atwell could work with them, however, desired script segments had to be laboriously located and transferred to 16 mm magnetic film—hence the 54 short takes he had to juggle.

In addition, documentary motion picture sections of over a dozen separate organizations normally provide key and useable segments. Pre-launch, launch and tracking footage—roughly 4,400 feet, in this case—came from Technicolor Inc. at the Kennedy Space Center, at Merritt Island, Florida. On-board remote cameras attached by the Marshall Spaceflight Center in Huntsville, Alabama record the spectacular view high in the heavens as the massive booster rocket separates from the rest of the rocket train. Meanwhile, activity inside the spacecraft (called IVA, for intravehicular activity), comes from the same astronaut-manned camera that will later be taken out on the moon's surface. Simultaneous and continuous coverage of the key actions and reactions from the floor of Houston's Mission Operations Control Room is provided by roving veteran A-V cameramen Bob Bird, Charles Turner and Jerry Bray, all of whom are allowed on the floor to work on a strict non-interference basis. Working with battery operated, self-blimped (soundproofed) 16 mm Eclair cameras, they have to shoot without giving a word or gesture of direction of advice. In addition, they must register good color qualities in poor light that is usually turned down to about 15 foot-candles to permit better visibility of operating personnel of their key instrument panels and lights. The experienced three-shift trio is also oblivious to the NASA remote camera which services the TV network pool as are the bus flight directors themselves. Animation of rocket train separations and the spacecraft drifting against a starry background normally comes from A-V's own 11-man animation department, but, in this case, footage comes from the manufacturer of the command and service module, North American Rockwell of Downey, California. And, finally, the Apollo 8 recovery footage comes from the seagoing cameramen of the Manned Spacecraft Center who spent Christmas aboard the U.S.S. Yorktown.

A part of A-V's support service to the Manned Spacecraft Center is the responsibility of running audiovisual facilities at press conferences. Here the press records the post-flight conference of the Apollo 7 astronauts (l. to r.): Capt. Walter Schirra, Jr.; Major Don Eisele; and Walter Cunningham.

also normally available to Atwell and other A-V editors are engineering coverage—usually of space hardware assembly and check-out—shot by such other major NASA contractors as Grumman, McDonnell-Douglas, Bendix, IBM, General Electric and Philco-Ford.

The first reels of footage Atwell looked at, however, were the heart and core of his picture—the 900 feet (before he trimmed it down to 600 feet) of shots taken from lunar orbit by the astronauts themselves. The camera they used was not called a motion picture camera (which, at times, it was) but a “data acquisition sequence camera,” a remarkable precision instrument manufactured especially for Project Apollo by the J. A. Maurer Company of Long Island City, New York. The 2.1 inch camera was smaller—at 8”x11”x.9”—than the old Gazette camera and could handle one pound magazines containing 130 feet of thin base Ektachrome. At one frame per second it could operate for 87 minutes before a magazine change or at movie camera speed, 24-frames-per-second, it could run for 15 minutes. It could also function at 6 and 12 frames per second. None of the Apollo 8 footage, however, had been shot in “real time” at 24-frames-per-second; but by printing each exposed frame four times—a process known as “stretching”—most of the “jumpy” quality of movie projecting could be smoothed out.

In Rich Atwell’s hand cranked viewer, he could experience an especially clear illusion of floating serenely above the moon’s alien surface. For rapt and silent minutes he watched—temporarily not as a professional but as a tourist—the eerie traverse of large and small craters, sinuous rills, empty lunar plains and on the moon’s back side, unnamed mountain peaks higher than Everest.

Strange feeling

“It was a strange feeling,” says Atwell, “to be among the first to see this footage—strange feeling and a good feeling.”

Then he put the lunar reels temporarily aside and ran through some of the reaction shots made from the floor of Mission Control. There was the great stuff at the end when the cigars and cigars came out, and here was a tight shot on Astronaut Michael Collins as he tells Borman and company they are free to leave earth’s gravity and go to the moon. “You are go for TLI (translunar injection). You are go for TLI,” Collins tells them, five words to send man on his longest journey. And here were the taut closeups of console operators—physicians, astronauts, engineers—during the long audio blackout when the three guys were behind the moon and no one knew whether or not their crucial lunar orbit insertion burn had been successful.

Suddenly, Atwell spotted a pull back take code by A-V’s head cameraman, Bob Bird. Bird had his zoom lens racked in tight on a in-to-forehead shot of tensely waiting Flight Director Milton Wendler. Suddenly, as Wendler gets the good news, his lips form the word “pow!” Bird gets Wendler wildly throwing up his right hand, as the pull back brings in the surrounding thumbs up gestures and

the room erupting in cheers.

For two and a half days, working until nine each night, Rich Atwell scanned, cranked, cut, spliced, matched, and discarded—filling huge drums with out takes. On Saturday, to give himself church time the next day, he edited 16 hours straight through until after midnight. After church on Sunday, along with Robbins, Wiseman, and soundman John McMurray, he mixed all day, putting in sounds from the thunderous liftoff by Werner von Braun to the closing fugue by Johannes Sebastian Bach. Then he came in early Monday to get ready for the irrevocable 9:00 a.m. interlock screening.

They used to say at the Disney Studios that no one laughed until Walt laughed, and at the Manned Spacecraft Center no one reacts until Dr. Gilruth reacts. Finally Gilruth, a normally conservative, reticent, engineer noted for understatement, turned around in his chair and in a hybrid, nasal Minnesota-Virginia accent said, “It moved me nearly to tears.”

One scene change

There was only one scene change before the film was jettied to Washington and its round of appearances; Dr. Gilruth wanted to emphasize even further the job done by Kennedy’s Launch Control Center.

“It’s an epic flight,” Gilruth explained, “and the people at launch control belong in the film.”

MSC’s Photographic Technology Laboratory, which A-V operates on the night shift only received the pre-print material on *Go For TLI* at 6:30 that evening. By 8:30 the next morning, three answer prints ready for screening were turned over to NASA.

Rich Atwell’s successful crash job was over, but A-V’s overall and multiplex job of servicing Gilruth’s Manned Spacecraft Center and preparing for and beyond the lunar

film of moon shots . . .

continued

landing was operating simultaneously in several areas.

While *Go For TLI* was going through the mill, two other A-V teams had related projects with deadlines just as imperative. Editor Don Pickard was preparing a silent film clip on the flight which Frank Borman would personally narrate live in Washington and Europe. Simultaneously Japanese-trained and UCLA-educated editor, Etsuzo "George" Ishikawa, and a veteran Aerojet-General Writer/Director/Producer, now with A-V, Ed Roden, were completing an 18 minute quarterly report (including the Apollo 8 flight) to be viewed by House and Senate committees and by NASA and contractor management. This was quarterly report number 23; A-V had prepared number one and all those since.

Elsewhere in the shop, 17 NASA sound films and 1 silent clip, representing 221 minutes of total screen time were in production. These ranged from short biographical profiles on each flight-scheduled astronaut to more elaborate training and orientation films.

A-V, which had previously prepared special Apollo 8 animation for NBC News, also regularly helps select and supplies footage to world wide media. During the last two months of 1968, for instance, A-V dug out and printed footage for one hour-long special to be shown in England, another to be shown in France, another for Italy and still another to be shown in Japan. A-V editors also worked on an ABC special and on Walter Cronkite's *Twenty-First Century* for CBS.

"Usually," says Bill Robbins, "all they have to tell our editors is the general subject matter they want, and the editors do the rest. Most of them have been involved in space from the beginning. They know where the footage is."

A final A-V service to the Houston space center is one whose results are often seen by the public, responsibility for setting up, handling and maintaining the audiovisual equipment at pre-flight press conferences, shift change press conferences and the important post-flight press conferences when the astronauts first tell the story of their flight.

It should be pointed out, in this day of spartan space budgets, that A-V's 167 people and such key departments as the 11-man contingent of professional animation artists and animation camera operators are far from being entirely supported by the NASA contract.

A-V also scripts, animates, casts, photo-

Animation Cameraman Ed Wilson prepares to zoom in for tight shot on lunar module on Oxberry animation camera.

graphs, directs, produces, processes and distributes scores of industrial, television, sports, teaching and public relations films each year.

A few weeks ago President Reberman announced to A-V staffers that their contract with the Manned Spacecraft Center had been extended three more years, "more than enough time," he said, "to cover the most exciting and rewarding phase of space exploration we have yet seen—man's first actual contact with another body away from earth."

Preparation for preserving that historic contact on film is already underway at Bill Robbins' facility, located just across a former Texas cow pasture from the Manned Spacecraft Center "campus" of starkly modern buildings.

As most audiovisual people at MSC know, the quality of the Apollo 8 photography from the moon was achieved with far less technical hazards than will exist this spring or summer when the first astronauts step out on the lunar surface.

There could be photographic glitches on the moon that no one has ever heard of, even though certain additional precautions are being built into the Maurer sequence camera. For one thing, to keep it from freezing up in the sub zero shadowed side of all objects in space, the lunar surface version comes with an ingenious internal heater. To protect the film from possible harmful solar radiation, all magazines will be kept in the thick-sided command and service module until the last possible moment. Then one of the very, very few things the two astronauts will hand carry as they leave the larger module will be the film. They are scheduled to take "several" magazines with them as they crawl through the hatch into the thinner walled lunar module which will actually ferry them down to the surface.

But there are also photographic worries after the return. The exposed film, along with the astronauts and 50 lbs. of lunar rock samples must go into a three week quarantine and decontamination process in MSC's Lunar

Receiving Laboratory. Here either the camera or the decontamination process itself could adversely affect the quality of the film.

The quarantine is not just a matter of bureaucratic caution. The laboratory manager, physicist Persa Raymond Bell, explains the need for strictness this way. "We can't really expect to find dangerous organisms on the lunar samples, but you must remember this port of entry has responsibility for the entire planet. We can't be too careful."

The probable solution is that some of the exposed footage will be decontaminated by immersion in a solution of ethylene oxide. Other magazines may be permitted to be utilized on the outside only. And still others may sit out the entire quarantine period along with the cameramen-astronauts.

One area of coverage Bill Robbins and Bird are working to improve is photographic recording of the astronauts as they step out of their spacecraft after recovery. Normally, they just step out on the deck of the aircraft carrier. Following the lunar landing flight, however, since they will be in quarantine, they will have to walk through an air-tight portal directly into a special trailer, called a mobile quarantine facility (MQF), containing medical and recovery personnel. The trailer will then be shipped and flown to Houston where the astronauts will again step through an air tight portal directly into the elaborately insulated Lunar Receiving Laboratory. To get the astronauts stepping out of the spacecraft and inside the MQF, A-V is training recovery personnel to use a Canon Scopic camera, one of the few 16mm movie cameras that has automatic exposure control.

Apollo 8 and *Go For TLI* of course, are already history, and, hopefully by mid summer, the first lunar landing flight will be history also. Neither A-V, nor the Manned Spacecraft Center it serves, can dwell long on those things time and duty sweep into the past in order to bring on the imperatives of the present. It is the nature of motion picture coverage of space — as it is of the space program itself — to pay close attention to the future and to the intriguing question of whether man does, indeed, have a significant destiny away from his home planet. A handful of films are already underway to match the intense concentration and man hours NASA has to devote to programs and concepts up to 10 years away — space stations, shuttle craft, orbital stations, and use of astronomy, physics, chemistry, biology and the entire gamut of the resources of earth.

For 1969 is more than that — as one A-V film is titled — *A Year of Fulfillment*, it is a year of converting the space accomplishments of the past decade into a more meaningful decade of using the conquest of space for the tangible applications which all men can share — as we now see the applications of the conquest of the sea and the air.

"So it is" the film concludes, "that American leaders, American science, American industry have brought the nation to the threshold of opportunity. The only question now is, do we dream as boldly for the 1970's as we dreamed for the 1960's?"

J. A. Maurer 16mm sequence camera used to take motion pictures aboard NASA spacecraft.

NEW FILMED report by Dynamic Films, Inc., about how one large supermarket chain is recruiting employees from the inner city, is attracting a great deal of attention among management executives in companies participating in the Job Opportunities Program.

It's Up to You

Defining the role of Jewel Food Stores supervisory personnel in recruiting men and women previously considered unemployable, this film provides a case study that Family Circle magazine considers useful to the entire food industry.

This twenty minute color film, *It's Up to You*, shows how Jewel Food Stores, headquartered in Chicago, defines the role and responsibility of its supervisory employees in the recruitment of young men and women not too long ago considered as unemployable. Why a film? Films can, of course, be used to convey information; but the right kind of film can do much more than that. Because a film can involve an audience in an intimate relationship with the subject on the screen, it can be an effective tool in changing attitudes.

The attitude of supervisory employees is at the very heart of the problem in realistic orientation and retention — for the new hires are facing what might be their first encounter with an industrial environment and it is necessary that their fears and insecurity be recognized as they enter the world of work.

An examination of orientation programs in various industrial and business groups clearly indicates that management understands very well what its objectives are in developing a sound program. Unfortunately most of present orientation programs, as good as they may be, fail to achieve their objectives in terms of affecting employee attitudes, and, what is perhaps more important, the attitudes of the supervisors. This is an illusive area not nearly so conducive to simple direct solutions as is the imparting of information or laying down ground rules. And it is to the orientation of management that this film report is directed.

The film is being shown throughout the food industry under the sponsorship of Family Circle Magazine, which is deeply concerned with everything that happens in food retailing because the publication is sold in supermarkets. In a prologue, Gilbert Maurer, Family Circle president, points out that many food chains are already embarked on thoughtfully developed programs for employing the disadvantaged. The industry today accounts for ten per cent of all job trainees under government programs. In offering the report, Family Circle believes that Jewel's program provides a case study which may be useful to the entire food industry. The people pictured are real, and they talk candidly about their frustrations and hopes.

The film is not meant to provide any pat answers, but rather to stir up interest in the problems and possible solutions devised in the beginning stages of the program by Jewel. The company is aiming to provide full-time jobs for over 700 new black people in the Chicagoland area in two years. The program which had only been in operation for 90 days when the film was made, features extensive use of "coach counselors" — generally other black people who "speak the language." New problems crop up every day, as the film shows, but Jewel is determined not to become discouraged. Lee Smith, Vice President, Personnel Development, says, "Can we afford to? Should we afford it? I can say 'yes' — it

does cost money and it does take time, but I question what our costs would be if we don't solve these problems."

The film shows Jewel coach counselors working on orientation and sensitivity problems with recruits and store managers (such basics as how to get to work, absenteeism, what the company expects of them, what they can expect from the company and what they can do to help each other.)

Jewel doesn't think the solution to the hard-core unemployed lies with the government or solely with the social institutions; it must come as a partnership with the business community.

It's Up to You was produced by Dynamic Films for Family Circle (using, by the way, an all-black production crew). Dynamic has an impressive record in this area, has worked on successful job opportunity programs with

Ford Motor Company and with several New York City banks. Nat Zucker, Dynamic president, is chairman of the Film Producers Association committee on job opportunities in the motion picture industry.

The twenty minute, (16 mm) color film, although demonstrating a new program going on in the food industry, could be useful to all industry. Dynamic has retained print and distribution rights in an agreement with Family Circle and will offer the film on a print purchase basis outside the food industry. Further information may be obtained from Dynamic Films, Inc., at 330 West 58th Street, New York, N.Y. 10019. Within the food industry, *It's Up to You* may be obtained on free loan by writing to John Pfriendler, vice-president - promotion, Family Circle Magazine, 488 Madison Avenue, New York, N.Y. 10022.

Dynamic Films crew shooting a location sequence of the Jewel-Family Circle film "It's Up to You."

Filming the Best of the New Educational Techniques

LIKE THE WEATHER, everybody from President Nixon on down has been talking about the urgent need for this country's business community to put its know-how and its money to work in attacking the problems of poverty, hard core unemployment and school dropouts — problems that give rise to grave dangers of our society. And like the weather, nobody has yet done much about it.

One group that has decided to take up the challenge and gamble on the foresight and self-interest of the American businessman comprises a partnership between the Aerospace Education Foundation and Audio Productions. On the premise that one basic cause of the above problems has been the failure — for many reasons, most of them inadvertent or insurmountable under existing conditions — to successfully educate substantial numbers of our disadvantaged citizens, the participants set about creating a tool, tangible and practical, which could be used by business and industry in helping repair such educational deficiencies on a nationwide basis.

This tool consists of a library, on film, of what are considered to be some of the most thoroughly proven, innovative educational classroom situations in this country. Since the films deal both with the public schools and with training for industry, the producing consortium expects there will be a double attraction for American business. The films will be of specific use to companies concerned with exploring innovative methods in training their own personnel, and at the same time offer a singular opportunity for practical public service by the companies which see fit to make them available to the country's educational community.

The package of educational innovations was derived from the filmed report on the National Laboratory for the Advancement of Education. This consisted of the actual setting up of an educational complex in the Washington Hilton Hotel in the District of Columbia, for three days last November. Teaching and supervisory teams representing ten proven programs were set up in classrooms stocked with students from the Washington and Baltimore areas, and invited to demonstrate their concepts and methods. Hours of these demonstrations were filmed by crews directed by Audio Productions' Frank Beckwith and John Nicholas. The resulting "Innovation Library" is directed to "educators" in the broadest sense of the word, teachers, administrators, boards of education, parents and taxpayers — anyone, in other words, involved in or with an interest in making the nation's educational process work better.

The "Educational Innovation Package," if we may call it that, covers several approaches, as captured in Cinema Verite coverage of

classes conducted by practitioners of those approaches. From the following demonstrations, selected films are being produced.

High school work and learn

A team from Patterson Cooperative High School in Dayton, Ohio, demonstrated that school's validated Work and Learn Program. More than 100 companies in the Dayton area actively recruit graduates of this program for a substantial portion of their work forces.

Reaction to rebellion

A highly successful program for dampening the fires of generational hostility was demonstrated by ministers from the Glide Urban Center of San Francisco. What they mainly demonstrate has been called the art of communicating with the uncommunicative — the runaway, the hippie, the political nihilist, the violent juvenile "grownup-hater" — this communication obviously being the first obligatory step on the road to constructive, responsible membership in society.

Individualizing in elementary

One principal and three teachers from Duluth's Special School District No. 3 presented the "Duluth System" of individualized instruction. 21 students from the District of Columbia's school system paced themselves through both group and individual learning situations, following individualized lesson plans, known as "contracts," covering specific objectives, each culminating in an observable activity which demonstrated that learning has taken place.

Self pacing vocational skills

From military classrooms in Biloxi, Miss.; Wichita Falls, Tex.; Denver, Colo. and Rantoul, Ill., personnel of the U.S. Air Force Air Training Command demonstrated its program for the achievement of learning effectiveness in a compressed time frame, through the use of new techniques in advanced communications technology.

Learning to learn

A group from the Tri-School District of the District of Columbia showed how children from kindergarten through sixth grade

can be motivated to learn by the discovery method, to explore and progress, each at own rate, through a combination of appropriate technology and effective teaching techniques.

LSD: The trip back home

Personnel from the San Mateo Union High School District of San Mateo, California demonstrated that school district's method of combating the incursion of LSD and marijuana among their students. As the demonstration began, Washington high school students "on loan" for the occasion, were put away through a 15 hour learning component in the program. Soon they became active participants in the discussion. The observer followed the action on worksheets as the instructor guided the discussion toward one major step in the "trip back home."

Pre vocational training

From Baltimore's "Inner City," two adult students, including several high school dropouts, showed how they were trained to become electronic technicians in a program that in addition subjects them to simulated "everyday" encounters with on-the-job problems.

Reading and writing

The New York City Board of Education Responsive Environment Program was demonstrated through presentation of its "talk typewriter" program whose purpose is to reduce reading and writing failures at all grade levels, from kindergarten students to functionally illiterate adults.

"... to reduce reading and writing failures at all grade levels, from kindergarten students to functionally illiterate adults."

"... the art of communicating with the uncommunicative — the runaway, the hippie, the political nihilist, the violent juvenile "group-hater,""

Crash Film Produced In Sales Crisis Saves Big Account

Facing the possible loss of one of their largest accounts, in one week Gates Rubber Company produced a film proving the superiority of their product. In so doing, they not only saved the account but helped improve their customer's product and bolstered their working relationship.

Two shooting days were used for the ten-minute film. One day had perfect conditions; however, the second produced a heavy snowfall.

TIME WAS OUR WORST ENEMY."

This is how Dan Nordstrom, marketing manager of the Snowmobile Components Division of Gates Rubber Company, Denver, explained a communication problem which threatened renewal of a large contract for five tracks with one of the country's largest manufacturers of snowmobiles.

"We stood on the verge of losing a very important renewal contract because one snowmobile manufacturer wasn't convinced our track was doing the job needed," Nordstrom reported. The only solution was to prove to him that it could handle the test. Unfortunately, the customer couldn't come to Colorado to witness actual tests, so we did the next best thing: we sent the test to him, via motion picture film. "One of our key products in this marketing area," said Nordstrom, "is PolyTrac, a synthetic polyurethane drive track that is lightweight, durable, flexible, and self-cleaning. It was developed by our Research and Development Division in conjunction with leading snowmobile manufacturers.

Gates management felt that a motion picture film of its product in action — even a hastily produced film — could serve as a satisfactory and successful substitute for a customer test.

"This, in itself, was not un-

usual for Gates," Nordstrom stated. "We frequently use sales films to aid our field representatives in telling our varied product stories. However, there was an added complication in this case: one week in which to produce and display a film on which would rest a contract for many hundreds of thousands of dollars."

Gates management contacted Spencer Nelson, an independent industrial film producer headquartered in nearby Boulder, Colorado. Nelson, who was then in the process of creating another film for the V-Belt Division of Gates, was asked to suspend production and undertake the crash project on PolyTrac.

Nelson moved his cameras into the field for performance tests — PolyTrac versus its leading competitor under the same conditions. Using Kodak Ektachrome Commercial 7255 film, Nelson shot the tests in just two days, one of which provided perfect weather; the second day delivered a heavy snowfall that seriously hampered activities.

"Even so," Nordstrom commented, "all of the film shot in the field turned out beautifully. We couldn't have asked for better work under the time and weather conditions available. From this footage, Nelson was able to put together an excellent 10-minute film demonstrating the

Continued on next page

In showing the film, Nordstrom was not only able to have his customer reverse his decision, but was able to show the customer other areas where improvements were possible.

superior performance of Poly-Trac under several types of snow conditions.

"The crisis in time meant we had no time to fool around writing, polishing, and dubbing a sound track. We went with visual captions.

"In fact, time was so short we didn't get a finished print. We took the work print into the customer's office, in edited form. But it did the job. Once the customer saw the test results on film, he not only reversed his decision and reinstated his order for our product, but he discovered that his equipment was not using Poly-Trac to full advantage. The film not only demonstrated to the customer the superior performance of Gates PolyTrac, but also showed ways in which other improvements to his equipment were possible. He was so impressed with the film that he kept it as a base from which modifications to his snowmobiles would be engineered.

"An interesting sidelight is that this crash-produced film, as a work print, is so effective and is in such demand by other snow-

mobile manufacturers that we do not feel a polished film from the existing footage is necessary. We are, however, considering making a more sophisticated sound film.

"We feel communicating product advantages to a potential customer is a critical problem in selling. A lot of different methods have been employed, many of them successfully, depending on the product and the situation. Perhaps the best is to allow the customer to inspect and test the product on his own terms; let *him* prove your product's superiority. But, time and distance do not always allow the manufacturer this luxury.

"As a result, this film has become one of our most important tools in dealing with snowmobile manufacturers. Its visual communication has a sales potential of several million dollars in 1968, and could produce a far greater annual gain in business by 1972. For a film produced in answer to a crisis, this one really communicates — not only to our customers, but in the kind of figures that sales management in any firm can understand.

Nelson, who produces, directs and edits all of his films, had just one week to organize, shoot and edit the Polytrac film for Gates.

FEEDING THE ASTRONAUTS

New Whirlpool film examines food management in space

Whirlpool Corporation, whose Life Support Department pioneered in space food management, has just released a 16mm color film on the subject. It's called "How Many Meals to the Moon?" and it's available on free loan to schools and to business and community groups.

Prints are available from Modern Talking Picture Service film libraries throughout the country. Requests may be sent to Modern at 1212 Avenue of the Americas, New York City 10036.

The 22-minute film was shot in actual spacecraft at NASA's Manned Spacecraft Center and at Whirlpool's development laboratories. Space reporter Peter Hackes narrates. Production was handled by the Jam Handy Organization.

Mealtime in space poses some special problems. The volume and weight of the food must be limited. There is no power for cooking or refrigeration. The astronaut must be able to eat the food in a weightless state and there

can be no crumbs or spillage. The food system must withstand decompression. Waste must be dealt with effectively.

Among the solutions Whirlpool shows in the film is a flexible container from which foods can be squeezed directly into the mouth. Water is first introduced into the freeze-dehydrated food in the container through a special valve by means of a pistol-like probe. The astronaut mixes the food and the water by kneading the container.

When he has finished eating, the astronaut breaks a germicide pill into leftover food to retard putrefaction and the container is placed in a waste storage space. If he eats part of the food and wishes to finish later, a "velcro" tab allows him to place the bag solidly on the wall of the spacecraft on a mating "velcro"

Bite-size foods are wrapped in plastic bags. Foods which have a tendency to crumble are dipped in a special starch-like substance that prevents crumbs but allows astronauts to enjoy familiar food textures.

Astronaut squeezes food directly into his mouth (top) in scene from "How Many Meals to the Moon?" A special water gun (bottom) is used to rehydrate spaghetti in zero gravity container.

The protector projector.

You've got an investment in time, effort, and dollars in every movie you make. We built the Kodak Pageant Sound Projector to protect that investment.

It protects the film with features like shock-absorbing sprockets, a soft tension gate, and mechanically reversible sound drum. In fact, no stationary part of the projector ever touches the picture or sound track areas of your film. All these things reduce film damage, and that's especially important when you project "one-of-a-kind" camera originals.

And the Pageant Projector makes the best of impressions on your audience. The picture and the solid-state sound system go on instantly. The sound is clean without hiss and crackle. No fuzzy not-quite-perfect sound either, because of the unique sound fidelity lever that lets you focus the sound light directly on the track whether the emulsion is facing the lens or lamphouse. The speaker is a quality instrument built into a detachable projector cover. A 40-foot speaker cord lets you put the sound up front where it belongs.

All in all, for film protection and film projection, you need a Kodak Pageant Sound Projector. See your Kodak Audiovisual Dealer or contact one of the offices listed below.

base, although finalization of the design has not been completed.

According to Col. Stokes, the winners of the DODEE may compete for the CINDY awards, since the IFPA Conference will precede the DOD Convention, but this, of course, will have no bearing on the DODEE awards. As a matter of fact, members of the DOD, who are also members of IFPA, feel that mutual benefit can be derived from the strong internal competition ensuing from the birth of the DODEE . . . a FIRST in audiovisual communication within the armed forces.

L.A. Chapter Hosts Faud Said, International Film Expert

Faud Said, widely known for his extensive experience in specialized on-location filming, which includes the *I Spy* television series filmed in locations all over the world, was guest speaker for the February meeting of the L.A. Chapter, which took place on Stage 12, Paramount-Gower Studios, in Hollywood.

Said's talk placed special emphasis on his CINEMOBILE, which was used to illustrate his unusual techniques. He also discussed (with illustrations) his plans for "location studios of the future."

In addition to Mr. Said, the members and their guests were treated to a surprise demonstration from Paramount Pictures of a new front projection technique being used for the first time in their film *Catch 22*.

San Diego Chapter Goes Nautical

Both January and February meetings of the IFPA San Diego chapter were concerned with interesting aspects of the sea and its environs. In January, the meeting took place at the facilities of the newly established Naval Undersea Warfare Center on Point Loma, California, where Tom Garcia and Bob White both of NUWC, gave a run-down on their motion picture activities, with special emphasis on the SEALAB III project, followed by an excursion to the docks to view various underwater research craft being used by NUWC scientists and cameramen.

In February, the chapter met at Camp Pendleton, where the West Coast motion picture unit of the Marine Corps opened its doors to brief the members as to what Marine photographers and cameramen are presently shooting, and how the USMC produces its films.

Washington Chapter Gets Look at NASA Apollo 8 Films

The Washington, D.C. Chapter, under the chairmanship of Bruce Herschensohn, held their February meeting in the office of Senator George Murphy (Rep. Calif.). Hosted by Del Smith of Technicolor, the meeting emphasized a drive for new members, and provided an opportunity for the 12 attendees to view and discuss the highly informative NASA film on Appollo 8.

The March chapter meeting will be held at the Pentagon, USAF Presentation Center.

Butler Offers "Habit of Selling" Training Kit

Butler Associates of Dayton, Ohio recently completed a sales training package designed for easy use by business and industry. A complete training program based on basic sales techniques, is entitled *The Habit of Selling*.

Each *Habit of Selling* package contains 6 sound-slide presentations that include tapes for voice and over 390 slides. Coordinated with the sound-slide presentation are 10 each of 6 workbooks, an instructor's guide, script booklets, wall poster and certificates of achievement. It is designed for the beginner as well as the veter-

an professional salesman. The Selling Plan — "5 A's of Selling" is included. The 5 A's are: Approach, Analysis, Active Demonstration, Answer Objections, Always Be Closing. The 5 A's are a trademark of Butler Associates.

The program was developed by Don Butler, president of Butler Associates. He formerly was assistant professor of Salesmanship at the University of Dayton.

The training packages are offered nationally through key Audio-Visual Dealers in each city. For additional information, write Butler Associates, Inc., 1325 W. Dorothy Lane, Dayton, Ohio 45409.

PG&E's "Harvest" Reviews California's Agriculture

Headquartered in San Francisco, the sprawling power networks of the Pacific Gas and Electric Company serve a wide area of Northern California. Film production activities at PG&E are the special concern of Jon F. Stanton.

Latest of that company's films is a 27-minute color film which was two years in the making by Stanton and covers the multi-billion dollar business of California agriculture. Appropriately titled *Harvest*, the film reviews Californians' quest for new food and water resources and their success in conquering arid lands. It is the story of modern farming methods which have turned that state into the world's most bountiful agricultural region.

16mm prints of the good new color film are available without cost to schools, service clubs and other groups in California through PG&E's film library at 245 Market St. in San Francisco or via local PG&E offices in that state.

Cartoons Work Well in Data Management Film

A warm, humorous, yet sophisticated cartoon approach has been used by Adams & Sturman, Inc., advertising, sales promotion and corporate identification agency, to produce a film entitled (*Prism* Program Reporting and Information System for Management) for Cybernetic Applications, Inc., a subsidiary of Cybernetics International Corporation.

PRISM is a higher level computer language that drastically reduces programming time and costs, increases computer output, provides for more efficient use of programming personnel, and minimizes the time required to generate reports for management.

The film *PRISM* was written,

produced and directed by Adams & Sturman. It is in color and released in 16mm and super 8mm to enable Cybernetic Applications salesmen to carry, handle and show the film more easily. The narrator is Norman Rose who narrated *War and Peace*. The film runs 13 minutes.

"Adams & Sturman produced *PRISM* in the cartoon style of the New Yorker magazine so those without data processing or computer orientation could also understand, learn and enjoy it," says Gaylord Adams, president & Creative Director of Adams & Sturman. "In addition, we had to

"Mission USA"—A Look at Life Insurance Investment

A new half-hour color film using dramatic technique on behalf of economic education, has been released for free loan to schools and community groups by The Equitable Life Assurance Society of the United States.

Mission: U.S.A. dramatizes the story of the investment side of the life insurance business focusing on some of Equitable's widespread activity in this area and showing how life company investments influence both economic and social progress in the United States.

The story concerns a young exchange student from Central America who comes to the United States to study our economy and find how his country can benefit from our example. He visits a suburban family and a high school, and on a trip to various cities he sees first hand how insurance money helps finance such projects as building construction, tree farms, jet aircraft and satellites. The film was produced in association with Film Counselors, Inc., by RFC Associates, Inc.

Mission: U.S.A. is distributed through the film libraries of Modern Talking Picture Service.

Angenieux Introduces Wide Angle Lens

An extreme wide angle lens for 16mm motion pictures has been introduced by Angenieux Corporation of America. The 9mm f/1.9, designated the R7, has a 94° field angle (on a .5" image diagonal). At a distance of only 3 ft. the field covered is 4" x 4'8". The lens is compact, with a total length of only 3.7

The compact wide angle lens corrects distortion and provides quality over the entire field.

inches and a maximum diameter of 3 inches, and weighs only 14 ounces.

Because of its great depth-of-field, the R7 is supplied with a fixed focus mount. At full aperture, a sharp image is obtained of all objects between 20 inches and infinity. More information is available from Angenieux Corporation of America, 440 Merrick Road, Oceanside, New York 11572.

Busch Offers Packaged Multi-Media System

Busch Film & Equipment Co. recently introduced the Pre-Fabricated Audiovisual Projection System Module No. 177. The Model 177 is a prefabricated multi-media fully integrated rear or front screen projection and sound system in one complete self-contained assembly.

The system consists of a 16mm optical sound projector, 35mm slide projector, filmstrip projector, P.A. amplifier, cassette tape recorder with inaudible trip signal and a local and remote con-

The Busch Model 177 provides unlimited versatility in audiovisual presentations.

trol panel for complete control of all system functions.

The entire Model 177 system is mounted and aligned on a specially engineered 29 x 50 inch module, which contains a low voltage power supply for the control circuits. It includes a control circuit distribution panel, controlled AC power outlets for each piece of equipment, plus complete plug-in control circuits for each piece of equipment in the system. All equipment has pre-positioned and aligned mounts.

The system permits unlimited versatility in design and opera-

tion, and a unique flexibility for presentations. For additional information, write Busch Film & Equipment Co., 214 S. Hamilton St., Saginaw, Mich. 48602.

Compact Super 8 Sound Movie Cartridge

Technicolor, Inc. has placed on the market a new, "compact" sound Movie Cartridge for its Model 1000 super 8 Instant Movie Projector.

The new cartridge will hold up to 220 feet of super 8 optical

Up to 220 feet (10 minutes) of Super 8 film can be housed in Technicolor's new movie cartridge.

sound film with a maximum running time of ten minutes. It is companion to Technicolor's standard 580-foot, 29 minute Movie Cartridge. Both cartridges can be used interchangeably in the same projector.

Because film is not driven by sprockets as in conventional projectors, there is substantially less film wear and breakage.

For additional information, write Technicolor, Inc., Commercial and Educational Division, 6311 Romaine St., Hollywood, Calif. 90038.

Realist Inc. Introduces Super Light Slide Unit

A high illumination slide projector has been introduced to the audiovisual market by Realist, Inc.

The product utilizes the Kodak Carousel AV projector, but triples its light output by incorporating a patented, Realist engineered, power convertor supply source and a unique xenon lamp. The increased brightness produced (2000 screen lumens) permits brilliant, balanced screen illumination pictures to be projected even in lighted rooms and

The Realist Super Light slide projector is a completely packaged high intensity projection system.

makes possible large screen projection over long distances.

Completely self-contained and easily portable, the "Super Light" Projector operates on ordinary 110v. AC. All standard Kodak accessories such as programmers and remote control devices can be used and a variety of different focal length lenses will be made available to accommodate practically all screen sizes and projection distance requirements.

The design and development of the Super Light projector concept was initiated by William C. Ralke, well known audio visual expert and president of Ralke Co., Inc.

A licensing agreement has been reached under which Realist will manufacture and market the Super Light Projectors. Two models will be available: Model No. 2000 includes a 500 watt xenon lamp and a power pack converter for projection performance three times brighter than the original projector. Economy Model No. 1000 doubles brightness output and uses a 1000 watt tungsten lamp which does not require the power converter. The projectors will be distributed by selected Audio Visual Dealers throughout the United States.

For additional information, write Realist, Inc., N93 W16288 Megal Dr., Menomonee Falls, Wisconsin 53051.

Shure Offers Professional Microphone Mixer

Shure Brothers, Inc. has introduced a microphone mixer/remote amplifier specifically designed to meet professional standards for studio and remote broadcasting, as well as recording and sound reinforcement applications. The Model M67 may be used as a single, complete, compact console or as an add-on mixer for expanding existing facilities. It provides four low-impedance balanced microphone inputs and one line input. It also provides additional microphone inputs in tape recording and VTR applications.

It features line and microphone level outputs; illuminated VU meter calibrated for +4 and +10 dbm out; extremely low noise and RF susceptibility; wide, flat frequency response; and two-level headphone monitor jack. It may

The M67 is compact and weighs only four pounds, three ounces.

be used with AC power or with an accessory battery pack. Provision is made for noiseless, automatic switchover to battery power if the AC line fails.

For specifications write Shure Brothers, Inc., 222 Hartrey Avenue, Evanston, Illinois 60204

Remote Control for Room-Darkening Drapes

With "Ausonic", the press of a button opens and closes draperies for darkening rooms for audio-visual presentations without remote control. The new patented device starts, stops and reverses draperies at any desired point. It can be used with existing cords and traverse rods or even curved ones, and can

operated from any place in the room.

The Ausonic system can be adapted to draperies of any size and of course it has other applications in home, office, hospital and elsewhere. The system carries a two-year factory warranty. Operation by means of electric time-clock or photo sensitive cell also is practical. More information may be obtained from Auton of California, P.O. Box 866, Arleta, California 91331.

RCA Introduces High Light 16mm Projector

RCA recently introduced new 1600 HL (for High Light 16mm. sound motion picture projector for auditorium use.

the projector's Marc 300 arc lamp produces up to four times the light output of conventional projectors, and pictures on the screen take on a remarkable likeness to daylight.

On the audio side, the 1600HL incorporates a new 15-watt solid-state amplifier for high-level sound output. In addition, the sound system can be linked with a number of RCA speakers and amplifiers to suit room and audience size.

Another new feature is a single-switch system for changing multi-reel shows from one projector to another.

For additional information, write RCA Commercial Electronics Systems Div., Camden, N.J. 08102.

Adapter for Filmstrips in Slide Projectors

An easy-to-use adapter that permits the projection of standard 35mm single-frame filmstrips on all current models of Kodak Ektagraphic and Carousel Slide Projectors has been announced by Eastman Kodak Company.

In seconds, an Ektagraphic or

The Filmstrip Adapter quickly converts a Kodak Ektagraphic or Carousel projector into a filmstrip projector.

The Carousel Slide Projector can be converted into a filmstrip projector by removing the lens and inserting the Kodak Ektagraphic Filmstrip Adapter — a self-contained filmstrip and lens unit.

Equipped with a Kodak Ektagraphic 3-inch f/2.8 projection lens, the new adapter not only projects conventional filmstrips with increased clarity and brilliance, but also allows them to be customized by the instructor to fit individual lesson plans or training sessions, thereby eliminating the projection of unnecessary visuals. For more information, contact the regional office of the Motion Picture and Education Markets Division of Eastman Kodak Company: New York City at 100 Park Avenue, New York, New York 10017; Midwestern, 101 West 22nd Street, Oak Brook, Illinois 60521; Pacific

Southern, 6706 Santa Monica Boulevard, Hollywood, California 90038; Southeastern, 1775 Commercial Drive, N.W., Atlanta, Georgia 30318; or Southwestern, 6300 Cedar Springs Road, Dallas, Texas 75235.

Solid-State Fluorescent Lamps for Dark Room Use

"Astra Fyre", which is 28" long and sells at \$19.95, and "Star Fyre", a shorter version in 22" length priced at \$15.95, are new solid-state, portable fluorescent lamps for darkroom use, safe for any film which can be used in red light. Because they're portable—they come equipped with 10' UL-approved cord and push-type on-off switch, and are ready for operation—the lamps can be carried to any convenient location for inspection of negatives as they develop. They are unaffected by photographic chemicals or moisture.

The lamps are constructed to withstand years of hard-use, and are guaranteed for 20,000 hours, or two years, on a pro-rated basis. No starter is required, and the bulb reportedly will never wear out. The non-glare light has no flicker, and the lamp runs "cool" so burns are impossible. Solid-state construction and elimination of all moving parts means no maintenance is involved.

For additional information, write Astrasonics, Inc., 4057 East 9th Avenue, Pomona, Calif. 91766.

Self-Powered Pointer for Rear Screen Use

A new illuminated pointer, developed primarily for use with rear-projection screens has been introduced by Spindler & Sauppe Inc. The pointer functions equally well on front projection screens, chalk boards and flip charts.

The unit provides a self-powered light source (a high intensity yellow light bulb encased in plastic) mounted on the end of a three-foot shaft. It is the only pointer currently available that will perform effectively on a rear-projection system, because rear-projection screens do not reflect the image of a projected light pointer.

More information is available from Spindler & Sauppe Inc., 1329 Grand Central Avenue, Glendale, California 91201. •

IAVA Sets Plans, Dates for Meeting in Chicago

Members of the Industrial Audio-Visual Association, professional society of audiovisual administrators within American industry have begun setting up the program agenda for their annual meeting in Chicago, Illinois on April 14-16. A unique and effective site for these sessions has been selected: The Center for Continuing Education on the University of Chicago Campus.

Program Chairman Michael Ritt (Combined Insurance Co.) and members of his planning committee, including IAVA president Frank Stedronsky (A. B. Dick Co.), met at the Center on Wednesday, Jan. 15 to review the advance agenda. This year special emphasis is being given the theme: "Here Comes Tomorrow — Get Ready Today" and all members are being asked to submit program subjects for final consideration during the coming weeks. While meetings are open only to members and prospective members, of IAVA "guest experts" will participate in the combined general and special seminar sessions.

Among the advance subjects discussed in planning session

were those provocative titles: "Management Relations and Audiovisual Administrator", "Potential and Pitfalls in Multimedia", "The Sales Meeting Alive or Dead?", "New Directions in Business Film Agencies", and "National Problems: What is the Audiovisual Administrator Doing to Help Solve Them?"

Special guest at the planning session was Lee Coyle (Ohio Telephone Co.), a past program chairman. At work on the program are other midwest members including Marshall Wayne (Mour & Co.) and Bob De (United States Steel Corp.).

Income Properties Form Nat'l Showmanship Service

The board of directors of Income Properties, Inc. will ask stockholders to approve a new name and a change in its capital structure at a special meeting scheduled early in March.

The proposed new name is National Showmanship Service, Inc. — more accurately reflecting IPI's current business.

IPI was engaged since its founding in 1956 down to early 1967 exclusively in the

helpful books and literature

Free Films for Television

More than 500 films available to television stations on free loan are described in a catalog to be published February 14 by Modern Talking Picture Service.

The films are sponsored — mostly for public relations purposes — by business organizations, trade associations, governmental agencies, professional societies and others. They are distributed to stations by Modern Talking Picture Service through its television division, Modern TV.

Subjects include sports, travel, health, religion, agriculture, cooking and others. Running times fall mostly into three categories: half-hour, quarter-hour and short shorts (1 to 7 minutes). Almost all of the films are in color.

Copies of the 48-page catalog will be available free from Modern TV film libraries and from Modern Talking Picture Service, 1212 Avenue of the Americas, New York, N.Y. 10036.

For Better Tape Recording

A 46-page how-to-do-it guide book for more effective use of tape recording in business and industry is being offered by the Magnetic Products division of 3M Company.

Called Better Communications Through Tape, the book contains a host of ideas for better use of the tape recorder in business and industry and also explains, in layman's terms, the basic operation of tape recorders.

The book contains ideas for the use of recorders by businessmen for such purposes as dictation, recording conferences and meetings, sales training and field communications. A separate section deals with the use of video tape as an active working tool in business and industry, just as in education.

Better Communications Through Tape is available free from 3M Company, Magnetic Products Division, Market Services Dept., 3M Center, St. Paul, Minn. 55101.

8mm Film Directories

The Educational Film Library Association has announced January publication of two new directories — The 8mm Film Directory, and Film Guide for Personnel Training.

The 8mm Film Director is a large volume, listing 5,000 films in over 500 pages. It includes everything in 8mm: silent, sound, stan-

dard 8, Super 8, reel-to-reel, Technicolor cartridge, Fairchild cartridge, single titles, and series. The book is arranged by subject categories, with indexes by title and by Dewey Decimal classification. Brief descriptions are given, with indications of age level and type of film. The only book of its kind, the 8mm Film Directory for the first time gives the teacher, librarian, program planner, and film user an authoritative guide to a rapidly growing field. It was edited by Grace A. Kone, published by the Educational Film Library Association, and distributed by Comprehensive Service, at 250 West 64th Street, New York City 10023. Price of the 500 page book is \$10.50.

Film Guide for Personnel Training was edited by Louis S. Goodman. It includes descriptions and rental and sales sources for films, filmstrips, and video tapes on such subjects as Apprenticeship; Collective Bargaining; Grievances and Arbitration; Human Relations; Leadership and Supervision; Management Skills; and Recruiting and Interviewing. More than 300 films are listed and described, under twenty-one subject headings. Trained directors, administrators, and supervisors should find the Film Guide for Personnel Training an invaluable handbook. Cost of the book is \$5.00, and it is available from the Educational Film Library Association at 250 West 57 Street, New York City 10019. Orders should be accompanied by advance payment, or by organization purchase orders.

H. Wilson Catalog Available

The H. Wilson Corporation is presently offering a 12 page catalog that details its full line of audiovisual equipment for use in industry, business, education and libraries. The catalog includes information on tables, mobile cabinets, mobile learning centers, listening tables, overhead projectors, overhead projection centers, VTR centers, TV wall and ceiling mounts, rear projection units and many other items.

The catalog also includes special application descriptions, prices and specifications. For a free copy, write, H. Wilson Corp., 555 W. Taft Drive, South Holland, Ill. 60473.

industry news . . .

continued

estate business — chiefly in the building and management of apartment buildings in and around greater metropolitan New York City. Since 1967, IPI has been switching into the film business — particularly in the field of technical film completion services and film acquisition and distribution.

IPI is reputed to conduct the most completely integrated group of completion services in the eastern market, chiefly through three subsidiaries — Cineffects, Inc., optical and special effects . . . Cineffects Color Laboratory, Inc., film printing and processing . . . and Manhattan Sound Studios, sound recording and mixing. A fourth subsidiary, National Showmanship, Inc., acquires and distributes foreign and domestic feature films. The company is exploring additional acquisitions or newly-created divisions which would add supplementing and complementing services.

Ultrabright Patented by Spindler & Sauppe

The United States Patent Office has officially registered the trademark Ultrabright to Spindler & Sauppe Inc., Glendale, California, for use in connection with "High Power Light Output for Use with Slide Projectors, in Class 26", according to S & S president Norman Sauppe.

The mark Ultrabright is used to describe an accessory modification which enables the firm's Selectroslide 2 x 2" slide projectors to project 3,000 lumens of light onto a screen; an image unequaled by any other slide projectors using standard tungsten, halogen, or zenon light sources.

While conceding that his firm has taken some good natured ribbing within the industry for the similarity between its Ultrabright trademark and a well known toothpaste brand name, Sauppe pointed out that the two products strive for a common goal: brilliant white. "Whether or not our Ultrabright projectors share the toothpaste's widely publicized claim of sex appeal is probably a matter of individual judgment, but we would be the last to deny such a possibility," Sauppe mused.

Music Makers Group Sets Sound Dubbing Facility

The Music Makers Group, Inc. (OTC) has established a sound dubbing facility in New York City to transform foreign language films to English using advanced dubbing equipment and synchronization techniques. The principals of The Music Makers Group, which creates original music for leading U.S. advertisers, radio and T.V. stations and for the film and entertainment industries, termed the new facility "a logical extension of the

company's present music, sound and broadcast activities."

The new sound dubbing facility uses advanced equipment and techniques which "electronically 'mesh' new voice sounds to existing lip movements to provide" what is termed "remarkable accurate synchronization of sight and sound." At the same time, Music Makers' new studio provides a foreign film maker or distributor with an excellent opportunity to create new music and re-score the film for the American market, it was noted.

The new studio which will operate as a part of the company's Sound Makers Division, is located at 3 East 57th Street, New York City.

Kodak Establishes New Branch in Taiwan

A Kodak branch has been established in Taipei, the capital of Taiwan. The branch will distribute Kodak photographic products in Taiwan and provide a variety of related technical services.

The new organization is a branch of Kodak (Far East) Limited — an associate company of Eastman Kodak with headquarters in Hong Kong. Previously, the distribution of Kodak products in Taiwan was handled directly from the Hong Kong headquarters.

Donald S. Lamb, a graduate of the University of Missouri, is manager of the new branch. He joined Kodak in Rochester in 1962. The next year he transferred to Kodak Philippines, Ltd., in Manila, where he became assistant manager. About the mid-

dle of last year, Lamb moved Taipei to begin organizing the branch.

IFTAPA Holds First Meeting, Names Officers

IFTAPA had its first general meeting recently at the Americana Hotel in New York City with participants including European, Asian and American members.

William Van Praag of Van Praag Productions, Inc., New York and Hollywood, was elected as president of IFTAPA and accepted with the understanding that his term of office was for one year. Norbert Handwerk of Insel-Film, Munich, was elected vice president of the European area, D. M. Sapra of Asia Telefilms, Hyderabad, India was elected vice president of the Far East area and Peck Prior VPI, New York, was elected vice president of the Western Hemisphere.

The Board of Directors consists of E. Beckh, Rincovisic, Switzerland; A. Becker, Australian Motion Picture Studio Association, Sydney, Australia; J. Valveias Rodrigues, Telecinema, Lisbon; Roberto Gaviola, Framma Gemma, Milano; Norman Greenblatt, Universal City Studios, Hollywood; Rogert Hagopian, King Screen Productions, Seattle; Norbert Handwerk, Insel-Film, Munich; D. M. Sapra, Asia Telefilms, Hyderabad; Peck Prior VPI, New York; and William Van Praag Productions, Inc., New York; Herbert Rosen, New York, offered to serve temporarily as executive director.

Slip the end of a video tape around the hub of one of our new Plio-Magic reels and it won't slip off. An exclusive Tape-Tac coating keeps the tape in place—perfectly flat, snug and secure—until you unwind it. Without slippage, ripples or wrinkles, or damage, either.

Our high-impact reels resist cracking, bending and breaking. And each reel,

available in 8"x2", 6½"x2", 8"x1" and 6½"x1", comes in its own metal-core shipping carton, so tape can't shift in transit.

With all this going for it, you would think our new Plio-Magic Tape-Tac video tape reel would be expensive. Think again. It's the *most* economical on the market. Call or write for details.

SPECIAL REPORT:

THE HOUSE THAT BYRON BUILT

The Latest in
Tools & Techniques
for Motion Picture
Film Users...

WORLD'S MOST SOPHISTICATED FILM LABORATORY OPENED IN WASHINGTON, D. C.

THE WORLD'S NEWEST and, by every standard, most efficiently-designed film laboratory, is now in full operation at the corner of First and "K" Streets in the heart of the nation's capital. The all-new 60,000 square foot four-level structure which houses film service operations of Byron Motion Pictures in Washington, D. C. fulfills every lab man's dream for a perfect facility. The realization of that dream was achieved by its founder-president, Byron Roudabush, and his associates after five years of meticulous planning. The pages of this special report also provide real insight into the tremendous present and future expansion of film requirements in business, education, government and television.

Innovation is the keynote within "the house that Byron built." Entirely windowless for obvious reasons of interior "climate control" and to make offices and working areas "dirt-free," only a single area of exterior glass shields the building's main entrance. Within these walls, the visitor passes through spacious halls and office areas toned in soft, restful hues of olive green and tan pastels, illuminated at frequent intervals by colorful abstract oil paintings. The atmosphere throughout, including the lab's working spaces, is that of quiet efficiency, which belies the feverish pace of operations where TIME is the always-demanding mistress. •

PART TWO · MARCH · 1969
OF BUSINESS SCREEN MAGAZINE

THIS IS THE HOUSE THAT BYRON BUILT

THE SEARCH FOR PERFECTION, a motivating theme behind all the planning of "the house that Byron built", began with the choice of its location. In Byron's own words "being a *service* business, we wanted to locate in the center of Washington with ready access to the beltway and the proposed new 'inter-the advertising agencies, the TV stations and government buildings. We also wanted access to the beltway and the proposed new 'inter-loop' highway which is being built. We had to be near trains, bus terminals, etc."

Today, the new Byron plant on "K" Street, N.E. meets those objectives: it is one block from the main post office and Railway & Air Express and is just opposite the Union Station, destined for complete renovation. A new Washington Visitor's Center will have restaurants, an information center and heli-

port, with terminal facilities for all of the bus lines. The capital's new inter-freeway will come within two blocks of the new Byron facility, providing fast access to anywhere in the city.

* * *

PLANNING FOR EFFICIENCY of operations, setting the stage for architect Thomas J. Stohlman's ultimate plans, was long-range. Byron sums it up: "Bob Johnson, our technical vice-president, and I spent many hours through those advance planning years at the drawing table: planning and measuring every piece of equipment, planning every outlet, all the piping, room dimensions, and . . . most important of all . . . *the work flow*. The finished building is surprisingly like the first layouts we made . . ."

Architect Stohlman describes the resulting

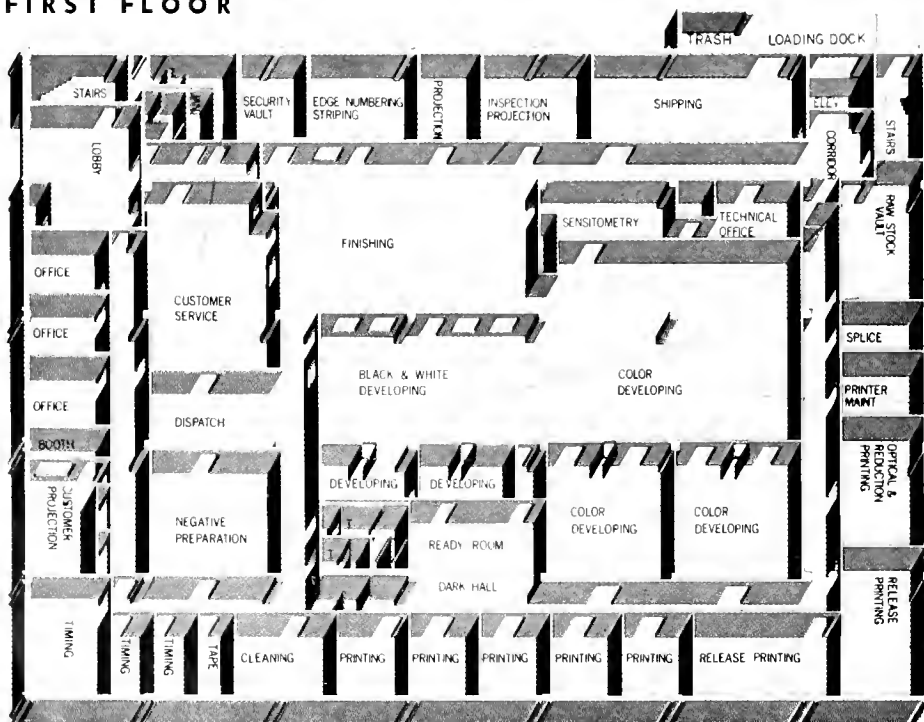

Located at the center of Washington's air, rail highway networks, the new Byron "house of Street" is near the nation's capital buildings. to the map above appears on the back page

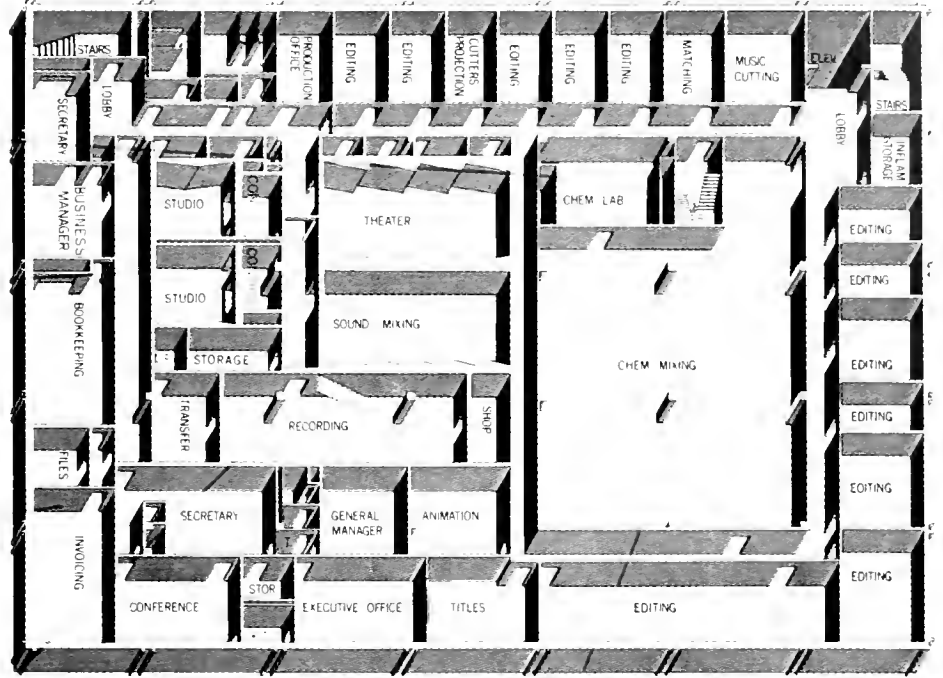

structure with these comments: "The organizing concept of Byron's plans follow the pattern in the step-by-step technique of processing film and in all the secondary operations and equipment needed to support objective.

"Because processing methods are subject to change in the future, Byron's labora-

FIRST FLOOR

SECOND FLOOR

...was designed to accommodate both limited internal re-arrangement and external expansion. The building's success is largely a result of a close architect-client relationship and a mutual determination of design goals." The well-known construction firm of E. A. Baer Co., Inc. of Takoma Park, Maryland, was responsible for the building of the entire structure from deep caissons to penthouse. Other aspects of the overall design are covered within following pages but the significant advantages of its windowless character, providing excellent temperature and humidity control, its hot and chilled water system and fume exhaust, are all critical to quality-controlled processing operations. The building's consulting engineers (Frank J. Sullivan Associates, of Washington) introduced sophisticated heating, ventilating, air-conditioning and plumbing systems to complement the architect's plans.

* * *

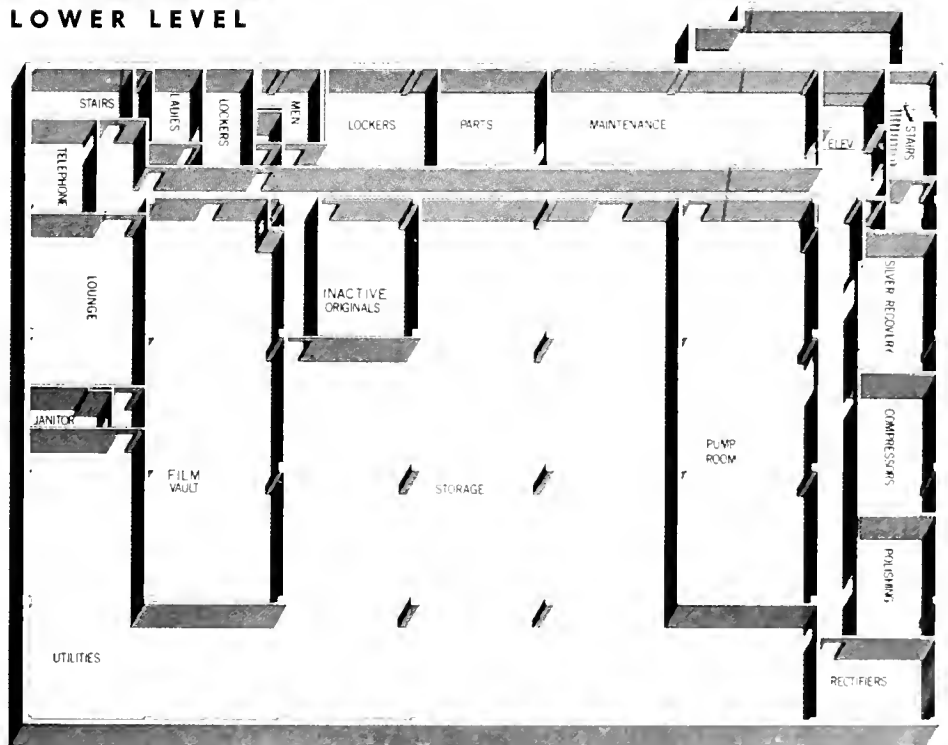

SCHEMATIC DIAGRAMS and supporting illustrations in these pages preview the "step-by-step" descriptive pages which take the reader through the logical flow of film operations. It is worth noting that the first department encountered just beyond the building's entrance lobby is "Customer Service." That phrase symbolizes the thinking behind and within the remarkable new "House on K Street."

* * *

EDITOR'S NOTE: all pictures in this section were photographed under natural light conditions throughout this modern building. ●

LOWER LEVEL

MANAGEMENT BY TEAMWORK

Experienced Specialists Head Key Activities in the Laboratory

Founder-president Byron Roudabush is pictured at work in the executive office in the new building.

YEARS OF SPECIALIZED EXPERIENCE, in all fields related to film processing services, sound recording, equipment design and maintenance, are as positive assets at the new Byron facility in Washington as the bricks, mortar and machines. Since the company's founding more than 30 years ago, its "drive" has been toward innovation, *to seek new and better ways to handle its basic product for the betterment of the film medium.*

Of such men and material are houses like this really built. The constant aim, both in the design of this great new facility and in every new piece of equipment brought off the drawing boards and into this plant, is simply to turn out better product in less time at lower cost to the user.

Byron himself is more than a corporate name: the company's founder is known most widely by his first name. And he has earned the industry's respect as a Fellow, Treasurer and past Convention Vice-President of the Society of Motion Picture and Television Engineers and as President and the first

Secretary of the Association of Cinema Laboratories which he helped to found. He is also a Special Member of the Edison

Pioneers. Members of the company's management team are pictured below on other pages of this special report.

.. Showcase at the new laboratory is this modern 70-seat theater which has facilities for 16, 35mm and CinemaScope projection with high-fidelity sound.

Screen Testing for Quality . . .

THROUGHOUT THE PAGES of this picture text editorial visit to the film industry's newest film laboratory service facility, proper emphasis is on the step-by-step phases, so carefully planned for maximum efficiency, in preparation, printing, quality control, processing and final inspection of its basic product: 16mm films.

These are areas the film user rarely sees, except in print such as he. What he *does see and must count upon are results on the screen.* The standard known as "Color-Correct" set and trademarked by Byron involves that on-screen result. It is first evident to the film user *on-screen*, when he first sees rushes or answer prints or previews of his final product in theaters such as those pictured on this page. This is what this building, these people, their machines and this

special report is all about: *the test of quality as the product comes to the screen.* The fact that film orders range into hundreds of color prints for a single title these days, reflecting the constant use throughout the U.S. and Canada alone of more than a half-million 16mm sound projectors owned by business, schools, churches and other groups, is evidence of the vital role served by today's laboratories.

Super-8 is still "to come" and so are Byron's impending installation of videotape transfer equipment, with color transfer facilities for tape-to-film and film-to-tape. Television and videotape are but other hand maidens of today's communications media.

Whatever tomorrow's needs may be, *the present* has been fairly and generously met by this proud new building on K Street, in the shadow of the National Capitol. All that is was created for is either "on-screen" in these theaters or on other screens worldwide. ■

At the left: this comfortable smaller projection room on first floor is conveniently located for customers to check answer prints. Below: on the second floor, this sound-mixing studio (see pp. 14,15) features an eight-position Westrex sound mixing console; electronic counter below screen is for both 16 35mm footages. Altec Lansing speakers assure the quality of sound.

Work orders are written and "originals" begin their lab travels in Customer Service Department.

CUSTOMER SERVICE: critical first steps

Detailed Instructions Guide "Originals" Through Preparatory Phases

THE CAREFUL PLANNING STEPS taken before this Byron facility was even constructed are immediately apparent just inside the entrance lobby. The film maker's first contact is at the reception window of the Customer Service Department. His work order is prepared as a key first step. If the customer's "original" negative is already stored in the lab's film vault (directly beneath the Customer Service Department), it is then ordered out, travels up a convenient elevator and begins its journey through the lab with detailed instructions on the work order. The same "dumb-waiter" also serves

the Sound Department and editors on the second floor.

From the Customer Service Department, the film and order move into the Dispatch Area for routing. Assuming that normal lab procedures are followed, the film then goes to negative preparation and timing rooms, then to the ultra-sonic cleaning equipment and, finally, ends up in the "dark" hall which leads to the "ready room." Here the film and order await scheduling to a printing room.

Incidentally, the Byron lab designed and was the first laboratory to use an ultra-sonic film cleaning machine.

Lab orders finally arrive at this well-lighted Print Assembly Room with its tables and rewinds.

• Film "raw stock" enters the building, the shipping/receiving area where it is fully inventoried and then stored in a special raw stock vault with direct access into a "dark" hall adjoining the ready room. Here, again, temperature and humidity within the vault are key factors in assuring the pro-

Holger Kjeldsen
Asst. Mgr. Customer Service

condition of film stock. Originals and stock then move to the printing rooms. Developed prints are passed into the printing rooms serving the developing machines.

Section of "ready room" at the laboratory where originals will be distributed to the printing room.

Hot splicing is done on Bell & Howell equipment like this "foot splicer" pictured in scene above.

Finally, the customer's film, printed and processed, is ready for the inspection with its high-speed projectors. Only after passing critical inspection, is it ready to move to the shipping room and outbound.

A brief, second look at these preparatory areas is in order. The lab has three ti-

"Timing" of film materials for the printing rooms also depends on the skillful hands of experienced technicians, guided by the original worker order.

Pictured at the right: Ultra-sonic cleaning of film is one of the vital preparatory steps taken at the laboratory to assure optimum cleanliness of originals before they begin their processing steps . . .

Byron was a pioneer in the design and use of this equipment. These machines were manufactured by the Lipsner-Smith Corporation, a leader in the field.

rooms. The lab's large timing room houses an important new piece of control equipment: the highly-precise Hazeltine Electronic Color Timer and a comparative color timer. After

timing data is put on cards, these are taken to a tape punching room where vital information controlling the amount of red, green and blue light is programmed for the printers.

The "ready room" has only dark room lighting but of sufficient strength so that the work order and printer information can be (CONTINUED ON THE FOLLOWING PAGE 20)

This modern Hazeltine Electronic Color Timer is among the latest equipment installed at the new laboratory. This new timer is located in the large timing room area on the building's first floor.

Carded timing data is converted to punched tapes containing precise instructions on red, green and blue light programmed for the printing machines.

The new stock vault has direct access into the "dark room" adjoining the "ready room". Temperature and humidity are carefully controlled to assure perfect condition of all basic material stored here.

Section of the Negative Preparation Department which has both B&H and Hollywood Film equipment.

Heart of the vacuum system which keeps entire lab dust-free is this Spencer Turbine machine.

SPECIAL BUILDING EQUIPMENT

THE CRITICAL ROLE of vacuum dirt dust removal in the printer stages of film processing is noted on these pages. Throughout the Byron laboratory, cleanliness is truly "next to Godliness." The entire structure is served by a central vacuum system similar to that used in modern hotels, avoiding the use of portable cleaners which tend to filter out larger pieces of material while returning dust to the air.

Below decks, on the lower level, is another important service area housing the compressor room. In this space, two Nash 50 hp. compressors are set up — one runs continuously with an air-bypass should pressure become too great. The other Nash compressor is an emergency unit which automatically cuts-in if the pressure falls below a certain level. Compressed air is stored in a large tank, is then fed to the squeegees on the developing machines.

The compressed air fed to the printers is first passed through an air dryer which removes all moisture. Another 20 hp. vacuum compressor and its accompanying storage tank supplies the vacuum squeegees for both developing machines and printers.

Nash 50 hp. air compressors and a nearby 20 hp. vacuum compressor which supply squeegees on both developing machines and the lab printers.

PRINTING: automation plus know-how.

Exacting Standards in Color Duplication Are Maintained on These Machines

NEARLY 25 YEARS AGO, Byron designed an optical system for use in a standard continuous printer and became one of the first laboratories in the country to print color films. At the same time, the company set up exacting standards for color duplication and called this process "Color-Correct" — a phrase registered in the U.S. Patent Office. This quality tradition is evident in the first floor areas which house printer facilities on K Street.

A typical printing room has two Bell & Howell "additive" color printers. At each printer location is an AC outlet, DC current for the printing lamp, three compressed air outlets, and one vacuum air outlet. Compressed and vacuum air, in addition to serving normal printing requirements, are used to operate squeegees on both raw stock and negative, blowing off any lint or dust, immediately drawing such material into the vacuum line.

The printing rooms are, of course, in dark-

room light but white light can be switched without affecting any other area. Incidentally the white light switches are seven-feet high and located on the right side of each desk so there is no chance of turning them off while raw stock is exposed. In addition to normal printing rooms, the new lab has two very large rooms, each of which is set up with an additive color printer with looping facilities. On the other wall in each room is a large Peterson color additive bi-directional panel printer capable of running 500-feet per-minute, printing picture and sound tracks simultaneously (both forward and reverse) so that rewinding or rethreading of negative and raw stock for each print is eliminated.

Another printing room houses the DePue optical one-to-one printers and the DePue production printers. This equipment also has a Bell & Howell additive light source so that Byron timing can be done by one medium programmed tape. This area also has a modest-size printer maintenance shop also

This Bell & Howell Color Additive Printer has been set up for "looping" (loop tree not in photo)

the dark hall so a printer can be rolled out for maintenance adjustment without the necessity of taking it down the elevator to the large maintenance shop on building's lower level.

And adjacent to the raw stock vault is a small room, conveniently located for splicing raw stock and "breaking it down" into the correct length for each release.

An important facility serving the printer rooms is located in a corner of the lab's lower level. In this Rectifier Room are the electrical panels which control each printer location. Rectifier units are mounted on the walls and can be patched to any printer locations. One main switch "kills" all the current to both the rectifiers and motors of all printers.

Adjoining this space is a room used for pushing film. After many, many printings the base side of the printing negative starts to show small abrasions and wear. In this room, the negative is placed on a machine where a small amount of acetate is flowed on the base. It is subsequently polished on a glass buffing wheel.

Automation, dust and lint-free lines, highly-precise, fast-moving machines of the very latest design . . . all these contribute importantly to the efficiency of operations

Peterson Color Additive Bi-Directional Panel Printer was designed for high-volume color release printing. It features complete interchangeability as well as minimum handling of sound, picture negatives.

Atlantic Research air dryer equipment takes a moisture out of compressed air before it is supplied to the printing machines on floor above.

and quality of product achieved at this critical stage of film operations at Byron. The illustrations on these pages tell the rest of the story of printing room operations . . .

Conveniently-located printer maintenance shop is adjacent to the printing rooms; equipment can be promptly adjusted or repaired without time loss.

Carlson (DePue) Optical Printers used in the Byron laboratory are equipped with Bell & Howell color additive heads to achieve maximum quality results in this critical phase of lab operations.

Chemical mixing room: here's where the basic ingredients must be blended for their journey to the developing machines on the floor below. All tanks are stainless steel, equipped with Eastern mixers.

THE RIGHT "MIX" IS THE KEY . . .

. . . *the Ingredients Are Film, Chemicals, Machines and the Skills of People*

SERVICE HAS A DUAL MEANING when applied to the entire second level of this Byron lab structure. A primary "service" function has been met here by the location of the chemical mixing area immediately above the developing machine room.

The original plan, often followed in other labs, was to put this "mix" room on the lower level and to pump all solutions up to the developing machine floor. The cost of many transfer pumps and of their maintenance was a deciding factor; it was just as efficient to raise bulk chemicals one floor up

instead of down — and water flows to the second level without additional cost.

So the large chemical room was most efficiently located over the machines which it serves. All of the tanks are of stainless steel, with stainless steel covers. Two mix tanks, valved in a flexible manner, are used for each solution. Individual Eastern mixers are installed in each tank. The hot water and city water pass through a mixing valve so that all mixing is brought to one uniform temperature. Large gasoline-type hoses and nozzles are used for filling the tanks.

Spacious bulk chemical storage area is on laboratory's lower level. Bagged chemicals are transported on electric fork lift truck (center of picture) via elevator to the chemical mixing room.

• Floors throughout the mixing room are covered with Dex-O-Tex, a chemical resistant material. All walls are painted with epoxy-base paint. Wherever fumes or chemicals are handled throughout the building, the same basic treatment of Dex-O-Tex and epoxy paint is used. These areas also have separate exhaust system, using stainless steel ducts, so that no air is re-circulated from any of these areas, including the chemical mixing room, chemical lab, developing machine room, edge-numbering room, cleaning, print rooms or the silver recovery room.

Just off the chemical mix room is the chemistry laboratory where analyses are run hourly on all solutions.

Although the technical office and quality control room are on the first level, the functions inter-relate to both floors. Spectrometry has a special room, equipped with two Westrex controlled-densitometers, backed up by a MacBeth densitometer and a Herfeld sensitometer as its main equipment, manned by highly-skilled personnel. Quality control is established in two ways: by the lab's chemist who constantly analyses the solutions *and* by printing photographic strips

Chemicals are carefully weighed in this section of large chemical mixing room. It is this man's job to assure exact "mix" goes to each of machines.

Technician adjusting the precise "flow rates" of the replenishment chemicals being supplied from the lab chemical mixing room to one of the large Pako Ektachrome developing machines on the floor below. Highly-precise control equipment such as this panel is a key factor in assuring ultimate "Color-Correct" print quality.

processing them and then reading and plotting the actual photographic results.

The lab production manager has his desk in the assembly room near the customer ser-

At right: engineer Russ Jenkins checks out schedules in his office close to lab operations.

Quality control is the mission of these lab technicians in densitometry control room. Both Westrex and MacBeth densitometers and Hershfeld sensitometers are key tools in this area.

ic department so that he has easy access to all parts of the laboratory; large windows installed in all *inside* walls give quick visual access to nearly every operation of the lab. Also related to these film operations is another important lab activity: the silver recovery room. Located on the lower level,

CHEMICAL ANALYSES THAT HELP ASSURE "COLOR CORRECT" RESULTS

CONSTANT CHECKING of solutions by the laboratory's skilled chemist is one of the two essential phases of quality control. Chemical laboratory facilities at Byron back up its specialist with every required tool for this continual task of analysis which every lab must do to assure proper blending as well as the quality and freshness of ingredients. The *second* phase of quality control involves reading and plotting of photographic strips.

Above: lab's chemist is using his pH meter to test acidity and alkalinity of solutions. **At the right:** analysing the developing solutions ("titrating") is another necessary procedure to safeguard the processing results.

benches, lathe, drill press, grinders and other tools are readily available.

Important mention should be made of the Byron film vault on the building's lower level. All active materials are stored here and all films are cross-indexed by title and by customer identification. Both temperature and humidity are very carefully controlled. And film is never stored on its edge. All cans lay flat on the vault shelves, as they should. •

Placement of Facilities and Tests of Materials All Part of Planning

THE INFINITE CARE taken in the planning and building of this modern laboratory has been reflected in both text and illustrations in these pages . . . but further comment from the architect (Thomas J. Stohlman) is worthy of elaboration. His report reveals that:

"Offices, developing rooms, chemical mixing rooms and storage facilities—preliminarily laid out and sized on graph paper by Byron and his staff—constitute the basic working components of the plant.

"The sound studio with its high ceiling and its need for insulation was placed deep (CONTINUED ON THE FOLLOWING PAGE 22)

space contains two Arriflex Silver Recovery Units, with their control panels in the wide hall. Storage tanks in this room collect hypo for processing. The silver is removed from the hypo by electrolysis and the reclaimed material is stored in an adjoining storage room near the main elevator door. Below decks also see illustration) are extremely spacious chemical storage areas where large amounts of bulk chemicals, reels, cans, and cartons are always kept on hand for uninterrupted lab operations. An electric hoist truck transfers bagged materials for every to the chemical mix room, via main elevator, on the second level.

Also near the elevator door is the entrance to the lab's larger maintenance department and its parts storage room. Large work

Below: control panels of the Arri Silver Recovery equipment pictured at right. This plant enables the lab to recover as much as 10 ounces of the precious metal per hour, to customer's benefit.

Below: working units of lab's Arri Silver Recovery equipment. They require only minimum floor area to perform extremely important functions; use a minimum of labor for maintenance and operation.

Pictured above is the "light" end of a Filmline color positive machine. Another Filmline 35 16 and 8mm color processing machine is being installed.

PROCESSING: developing your image

TO BETTER SERVE its worldwide clients, the Byron lab has been set up to handle nearly every important negative and positive motion picture film process. The modern developing machines on the building's first floor dramatize this range of services. . .

In the color area, for example, are two large Ektachrome developing machines, manufactured by Pako, each running 75-feet-per-minute. And each of these machines processes Ektachrome Commercial (ECO) film, the Ektachrome high-speed films and Ektachrome prints. Both Ektachrome developing machines also process optical sound track film stock.

The large Filmline color positive machine pictured (light end only) at the top of this page is another important developing room set in this busy laboratory. This Connecticut-manufactured machine turns out high-quality work during its nearly-constant operation.

In the black-and-white area of this laboratory, a Hi-Speed 16mm developing machine is matched with a 16mm and 35mm negative machine and a 16mm and 35mm positive machine. This equipment utilizes the "spray" method to achieve optimum image sharpness.

On one of the two remaining vacant developing machine "pads" in this area, Byron is installing another Filmline 35/16 and 8mm color processing machine, also designed to run at 250-feet-per-minute. Lab plans

At the left: two Pako Ektachrome color developing machines recently installed are highly diversified; both machines can also process optical sound. Chemical piping is polyvinyl chloride.

THIS EQUIPMENT ASSURES EVEN WATER TEMPERATURE

At the left: to maintain required temperatures of the laboratory's water supplies, Byron has installed these efficient A. O. Smith hot water heaters . . .

At the right: water must also be chilled to the correct film-washing temperatures and for this purpose, the lab installed Acme water chiller equipment pictured here. City's water supply ranges from 88 degrees in the summer to 33 degrees in the winter, making cooling and heating of lab water an imperative.

In the immediate future include offering Super-8 color prints. All processing, printing, inspection and assembly equipment of the latest design is already on order for this service. All pictures will be made by reduction to assure the sharpest possible image. Super-8 prints will be available with either optical or magnetic sound tracks.

Supply lines above these developing machines include pipes carrying the city water supply, chilled water supply and return, hot water supply and return. Since the city's water ranges from 88-degrees in the summer to 33-degrees in midwinter, the lab is constantly chilling or heating water for mixing with the city supply in order to provide correct film-washing temperatures.

Although each developing machine is on a raised level concrete slab, the developing machine room floor slants toward the darkroom wall so that it can be washed down

Above: these pumps move both cold and hot water to the machine rooms, are carefully regulated by precise valves which provide required supplies.

with the water running into a special gutter at the wall.

Each developing machine has its own in-

tercom from the dark section to the light section and these are so arranged that the dark room man does not have to operate any buttons . . . he merely talks and is heard at the light end.

In this room are also located the control cabinets housing flow raters for chemical replenishment solutions and the automatic temperature control devices. All pipes connecting the control cabinet to each developing machine are beneath the floor and all chemical pipes are made of a special polyvinyl chloride material which will not deteriorate or bend even at the temperature of boiling water!

Replenishment chemicals, as described on the preceding page, come from the chemical mix room on the floor above, each extremely well filtered. Both the technical office and the qualitative control room are adjacent to the developing machine area. •

Utilizing the "spray" method to assure image sharpness, these Hi-Speed 16mm black-and-white reversal machines include 16:35 neg-positive facilities.

Pictured at left: An impressive view of the sound machine room on the second floor of the lab. Together with these Ampex tape recorder the lab's sound department also has Westrex recording equipment . . . all of the machines are inter-connected for widest possible range of recording.

PRODUCER SERVICES

. . . *Sound Recording, Editing, Music and Effects Libraries*

PRODUCER SERVICES "under one roof" have always been an important "plus" at Byron Motion Pictures, serving such widely-diversified clients as the American and National Leagues of Professional Football Clubs, NASA, and nearly every other government agency, as well as numerous trade and professional groups, industrial and educational film users.

Westrex 35mm optical sound transfer equipment is pictured in scene below beside the laboratory's frequently-used Ampex quarter-inch tape recorder.

You'll first encounter the Sound Department at its product office for visiting producers. Or you might be visiting the first-floor screening room to view rushes and answer prints. But on the second level, "Services" really merit a capital "S" with a large, very comfortable theater seating some 70 people on director's chairs of black naugahide. The drapes are electrically-controlled and the screening area can be masked for 16mm, 35mm or CinemaScope previewing.

In addition to the booth controls, there are additional controls at a convenient preview desk to handle sound volume, light dimmers, focus control and an intercom to the booth. "Voice-of-the-Theater" speakers provide the expected top standard of quality.

At the rear of the sound mixing theater, the Westrex mix-

Light makes sound in this scene of the laboratory's Westrex 16mm optical recorder equipment, located in the Sound Department on the second floor.

Equipped offices for visiting producers are among the laboratory's main facilities maintained as part of extensive producer services . . .

... is on a raised platform. It is an 8-position mixer with built-in graphic equalizers, electronic footage counters and a rack which houses special music filters and electronic reverberation equipment. The electronic footage counter under the screen operates on both 16mm and 35mm footages. This is where all of the sound at Byron is "mixed" — music, effects, narration and sync sound — into one composite track.

There are also two voice recording studios, each with its own control room. Narrators can be cued by flashing light, intercom or through a head set. Any program material can also be played to the narrator by speaker or earphones. Westrex two-position mixers back up this service facility. Control cabinets enable the mixer to start or stop all recorders and dubbers that are on the selected electrical

The narration studio and control room are pictured above; these studios also feature Westrex "mix" facilities and controls for high-fidelity and complete accessibility to all sound equipment within this Department.

One of the lab's several editorial rooms, all equipped with Moviolas as well as synchronizers, rewinds, barrels and convenient work tables . . .

busses. Altec high-fidelity speakers are used for monitoring. All control positions are equipped with small signal lights indicating which projectors, recorders or dubbers are interlocked and on the

(Continued on the following page 18)

This 16/35mm projection room opens into both narration studios, sound mixing studio and the theater. Projectors are Bell & Howell 16's and Century and Simplex 35's, with Westrex motor drives, RCA Selsyns for interlocks; 35's also have Xenon light source. Below: Richard "Pat" Patton, manager, Sound Department, is behind the Westrex sound mixing console.

The proof of the pudding

Normal and High-Speed Inspection Assure Print Quality

FINISHING STAGES of Byron quality-controlled product are accomplished in the lab's large assembly room (see picture on page six, lower left) with its many rewind tables for spooling prints. This room also contains an inspection machine that will handle four 16mm release prints at one time, running at any speed. Another adjacent normal and high-speed projection room is in regular use. •

For 16mm print inspection as films will be shown in the field lab uses Eastman Pageant projector.

These high-speed print inspection projectors, manufactured by the Hollywood Film Company, help to assure the ultimate quality of all prints out of the laboratory. This final phase of the processing procedure is the "proof of the pudding" from the customer's viewpoint . . . and at point rigid quality standards must be met or prints are rejected.

SERVICES INCLUDE TREATMENT OF PRINTS & EDGE-NUMBERING

SPECIAL FACILITIES which round out Byron's film services include the first floor room equipped with Hollywood Film Company edge-numbering machines (for both 16mm and 35mm) and the lab's Peerless film treatment equipment. A pioneer in magnetic striping of film, Byron also provides for this service with its Reeves sound striping machine. There is also a security vault with a large bank-type door for special storage adjoining this working space.

There's a picture of the laboratory's magnetic striping operation on page 18. •

At the left: one of laboratory's special services involves Peerless Treatment of release prints to increase life of the film when showings are held in

* * *

Below: another of the lab services involves Hollywood Film Company 16 and 35mm edge-numbering equipment, pictured in use by technician within the especially-equipped first floor

At the left: when the customer's order has been completed, it's ready to move through this busy shipping room with efficient long counter and routing boards for air, rail or truck handling of prints. Time is the lab's key ingredient

SILVER RECOVERY PLANTS

With recovery rates as high as 10 oz. per hour, make silver recovery more profitable than ever!

A complete line of Arri Silver Recovery Plants—ranging in current density from 10 to 100 amperes—is available to photofinishers, X-Ray and film laboratories, and other large-volume hypo users. Efficient performance, together with today's higher silver prices, make Arri Silver Recovery units a sound investment which will pay for itself in very short time.

Features: Minimum space requirements ■ Maximum efficiency through optimum flow conditions (turbulation and cascading motion) ■ Long service life ■ Automatic recovery of silver with a high grade of purity ■ Minimum manpower requirements for maintenance and operation ■ 50% saving on fixing chemicals

buss. Looping facilities for recording are also available to each of these studios. And there's a convenient storage room for tape.

The recording machine room on this second level is equipped with an impressive row of Westrex Recorders and Dubbers and Ampex tape recorders. With this equipment, Byron can record or playback 16mm or 35mm "opticals" of any format. 16, 35, 17 1/2 mm or quarter-inch magnetic tape equipment is available for recording or playback using any type of sync signal. The main amplifier and patch bay is also located here. Electrical troughs carrying AC, low-

voltage control wiring and low-level audio serve all sound recording. And in this area, too, is a small repair shop and a transfer room with 35mm and 16mm film recorders. Westrex recording valves are stored in cabinets above the recorders, all heated to a constant temperature.

The entire sound department is serviced from one booth, with three distributor busses. Any recorders, projectors or dubbers can be switched to any of these for running forward or backward, always remaining in interlock. Projection booth equipment includes Bell & Howell, Eastman, Simplex and Century projectors. 35mm projectors are equipped with the Xenon light source.

Preparation of film for processing: conforming of original A & B rolls to cut the work print.

new **LSC VEDETTE**
16mm and 35mm PROFESSIONAL PROJECTORS
for fast, safe, high speed viewing and
inspection of motion picture film

- The ideal machine for film quality control, timing and correction, and release print inspection. Handles negatives, fine grains and prints.
- Visual inspection of both picture and optical sound track. Solid state amplifier for simultaneous monitoring of picture and sound.
- Efficient revolving prism shutter and sharp optics produce bright, clear images without overheating film.

- Smooth, gentle film handling at up to 400 ft./min., without intermittent movement of usual claw or Geneva gear drive. Stable, positive focus. 2,000 foot film capacity.

Write for LSC Vedette literature or request a "no obligation" demonstration.

CF₂ ULTRASONIC CLEANER

for MOTION PICTURE FILM • MICROFILM •
MAGNETIC TAPE

Presented The Academy of Motion Pictures Arts and Sciences Award of Merit for Outstanding Technical Achievement.

Ultrasonic energy is the most effective and economical way to completely clean motion picture film, microfilm and tape without mechanical scrubbing and wiping. Ultrasonic energy performs the entire cleaning operation.

- Restores clarity and sound to maximum quality.
- Enhances the entertainment value of motion picture film and improves commercials.
- Assures static free film with color balance undisturbed.
- Cuts projector maintenance costs . . . no dirt or dust carried into gates and orifices . . . less breakdowns.
- Completely automatic . . . requires only loading and unloading.

- Costs only 1/20 of a penny per running foot to operate.
- Used by every major motion picture lab in the world.

The large maintenance shop on laboratory's lower level is equipped with necessary machine tools.

SPACIOUS LOWER LEVEL HAS WORKING AND RESTING PLACES

THE LOWER LEVEL is both a *working* and *resting place* within the house on K Street. On this level are spotless employee

locker rooms and toilets. And there's also a complete employee's lounge with dispensing machines that provide hot and cold drinks, candy, pastry, cigarettes, sandwiches and caseroles. An RF oven to heat food is available as well as money changers.

In the large storage area, beyond the

maintenance shop, all essential utilities located: gas, oil, water and the building's main electrical panel. Water is supplied by an oversize 10-inch main and all water entering the building is heavily filtered.

Going upstairs, above the second level is another "utility" area containing the building's 40-ton water chiller, six compressor units for the 200-ton air conditioning equipment, recirculation pumps, air handling supplies and return fans. There is also a very efficient air filtering system.

Heating is provided by two very large furnaces and water heating is handled by gas hot water heaters of 750,000 BTU's for heating lab water. The water tower for the air conditioners is located on the inside a wall. Air-cooled condensers are on the roof.

Finally, the central vacuum cleaning system is also located in this mechanical equipment room. This room was set up by the building's engineers to be entirely automatic and requires only an occasional inspection — once each day.

* * *

(CONTINUED FROM THE PRECEDING PAGE) easily read. Overall, the carefully-planned design of every working area follows, step-by-step, Byron's key objective: the most efficient means of handling the customer's film while at all times maintaining the laboratory's "Color-Correct" standard of quality in relevant operations.

★ *The Star of the New Byron Laboratory!* (*and other great processing plants*)

PETERSON COLOR ADDITIVE BI-DIRECTIONAL PANEL PRINTERS

Innovative design and superior operating features keynote the PETERSON COLOR ADDITIVE PANEL PRINTER recently installed at Byron Motion Pictures in Washington, D. C. Specifically designed for high volume color release printing, this panel printer is built for use with the standard 1" 8-hole tape system.

The two main concepts of the printer are (1) complete interchangeability with existing color additive printers. Any negative and program tape now in your vaults can be put on this machine without any additional negative or tape preparation. (2) The second feature is minimum handling of picture and sound negative. Since the printer is bi-directional, the negatives are threaded only once.

Your "Custom" processor is already built

Pako's unique building-block design enables us to make more than 40 processor models to handle nearly any film at nearly any speed. We simply assemble the right combination of modules (loader, tank section and dryer) test it, and ship it.

Which means you don't have to worry about custom-made parts or a slight error in custom-engineering and construction (the reliability of a Pako Ciné Processor is only exceeded by its consistent top quality results—but not by very much). You don't have to worry about custom-made prices, either. Or months upon months of custom-made waiting.

All Pako Ciné Processors feature *bottom drive*, the most successful, trouble-free rack system on the market. Constant film tension, maintained by the speed ratio of drive spools to idler spools, virtually eliminates film breakage.

Other features include an easy-access electrical control panel, air squeegee wiping system, film elevators and take-up reel, "light side" remote main control unit, and, on some models, a fail-safe re-exposure system.

If you're interested in a ciné processor, contact your Pako Distributor or write to us. We have over 40 different "custom" models waiting.

PRE-PLANNING & MATERIAL TESTING

(CONTINUED FROM THE PRECEDING PAGE 11)

in the middle of the upper floor and away from all moving mechanical equipment. To this concept, the architect has applied his own specialized knowledge of column spacing,

stair locations, corridor widths, construction practices, etc. And, since water and air temperature control and fume exhaust are critical to many of the processing steps, consulting engineers introduced sophisticated heating, ventilating, air conditioning, and plumbing systems into the overall scheme.

"Interior surface treatments in a laboratory-type building also were carefully studied and the selection of finish materials noted how exposed surfaces might be expected to perform. Both the architect and Byron staff spent considerable time and effort testing floor and wall finish materials to make sure that they would withstand accidental acid spills. For example, one flooring product was subjected to standing puddles of film-processing chemicals for an entire weekend. This was much longer and much more intense exposure than the product itself would experience in actuality. The product (Crossfield's Dex-O-Tex) performed well and has been applied on all floors in areas where chemicals are stored or handled."

NOTES ON THE BYRON LABORATORY'S EFFICIENT OFFICE LAYOUT

BEHIND-THE-SCENES in the Byron laboratory report takes special note of the building's efficient office facilities. Attention to detail begins with the eye-catching vinyl grass carpet used throughout halls, walls and offices. This material is extremely durable and easily cleaned, an important facet in an operation where cleanliness is paramount to quality operations.

Convenience, thanks to careful planning, is evident in the ease of access to the hallways leading off the front lobby, which labor-

offices, the sales manager's office and a laboratory secretary all in this area.

Each area, by the way, has its own humidity and temperature control. For fast communication, the lab secretary has an IBM dictating machine and transcriber hooked up to four remote areas so that this one key employee can handle the correspondence for both the sales department and the laboratory.

The entire building is equipped with an International Telephone & Telegraph (Terryphone) inter-communication and paging system. This system enables anyone to page or call to anyone else in the building and also provides seven phone circuits such as Technical Service, Management, Sales, Production, Executive and a common line. An FM tuner is also hooked up to this system and restful (CONCLUDED ON THE FOLLOWING PAGE 24)

music is played through the paging speaker. Step outside for a brief tour . . . both outside of the lab itself and the parking lot are attractively lighted. Lights and electric sign are controlled by an electric clock. Reserved parking spaces are provided in the walled lot for employees. And the building is pressurized so that every time a door opens, air flows out, thus preventing any dirt from entering the building. In the lobby is the fire alarm system indicating all of the fire stations located on all levels of the lab.

A Closing Word from Byron Himself

☆ It's a good idea to have the final word come from the man who planned the "dream" building. Here's what Byron has to say:

"Now that the building is complete and we have moved from three older structures to this one, we have tried to 'second-guess' our plans. All in all, there is nothing we would change if we were to start all over. We are extremely pleased with results. So we are apparently achieved our goal.

"We would like to invite you, on your next trip to Washington, to see what we truly believe to be the most modern film laboratory in the country."

Congratulations and Success to Byron Motion Pictures, Incorporated

19th PRODUCTION REVIEW

THE COMPLETE BUYER'S GUIDE AND REFERENCE BLUE BOOK TO QUALIFIED PRODUCERS
OF BUSINESS AND TELEVISION FILMS IN THE UNITED STATES AND ABROAD

Since 1620, more than 100 million people

have seen the Pilgrims land at Plymouth Rock.

They've seen it all on film.

Courtesy of Aero Mayflower Transit Company, the world-famous long distance movers.

Aero Mayflower wasn't around to greet their namesake when the Mayflower reached America in 1620. But they were definitely on the scene in 1957, when a group of adventurers reenacted the Pilgrims' historic voyage. It was a perfect public relations opportunity to broaden Aero Mayflower's corporate identity. And they made the most of it. Through motion pictures.

The company produced "The Mayflower Story," a fascinating 16mm sound-and-color film that documents the 54-day crossing of Mayflower II.

Then, to make sure their film reached the largest possible audience, Aero Mayflower called in the world's largest distributor of business and public relations films. Modern.

So far, more than 100 million people have witnessed how Mayflower II was planned and built in England, then sailed to Plymouth, Massachusetts. They've seen it on television. At resorts. Airports. Club meetings. Schools. Churches. In community groups of all kinds.

The film is still making friends for Aero Mayflower all over the U.S. By giving viewers a picture of what life was like back in 1620, Aero Mayflower is better known today than ever before.

MODERN TALKING PICTURE SERVICE, INC.

Want more information about Aero Mayflower's film? Or about how sponsored film programs can benefit your company? Write to Mo

Sure, you've got some great sales films. But how do you get your salesmen to show 'em?

With the Technicolor 1000—of course.

Sales films really sell. But who likes to use 'em? No one. Not with all the complicated, heavy equipment you have to cart around. That's why the Technicolor 1000 cartridge-loading Super 8 movie projector makes a big hit with salesmen. It's 19 lbs. light. Just snap in the sound film loop cartridge (with up to 29 minutes of film) push the "go" button and the show is on. No threading, no rewinding. Why don't you look into converting your current sales films to Super 8 sound film loops. It's surprisingly inexpensive. Just contact Technicolor. We'll help you put your films on the road!

Bell & Howell Begins CCTV Training School

Bell & Howell has begun a School of Instructional Technology, created to provide professional training and guidance in the practical applications of closed circuit color television. The school is fully color equipped offering courses in both production and service training.

The school is staffed with qualified instructors, carefully chosen from among industry's most accomplished professionals.

The production curriculum includes basics of TV production, camera staging, multi-camera systems, lighting, writing, producing, writing, directing, applications and integrated presentations.

The service curriculum in-

cludes color characteristics, color mixture curve, signal analysis, test equipment and several other important phases of service.

For a schedule of classes and additional details, write The Registrar, Bell & Howell School of Instructional Technology, 7235 N. Linder Ave., Skokie, Ill. 60076.

Five Outstanding Films Nominated for Oscar

Five outstanding industrial films have been nominated in the Best Documentary Short Subject category by the Academy of Motion Picture Arts and Sciences.

Those nominated for the singular "Oscar" honor include:

The Revolving Door, pro-

duced for the American Foundation by Vision Associates, written and directed by Lee Bobker. A striking documentary about the correctional system in the United States.

A Space to Grow, produced for the Office of Economic Opportunity by Tom P. Kelly, Jr., and directed by Bob O'Donnell of Lord & King Associates, West Chicago, Ill. A moving documentary about the OEO's Upward Bound program for high school students.

Why Man Creates, produced for Kaiser Aluminum by Saul Bass Associates. Superb animation highlights this fascinating examination of creativity.

A Way Out of the Wilderness, produced by John Sutherland Productions, Inc., of Los Angel-

es. An outstanding effort by D. Weisburd of John Sutherland Productions.

The House that Amanda Built produced for the Government of India by Fali Bilimoria.

The final winner in the category is yet to be selected and named during the annual Academy Awards "Oscar" presentations on the evening of April

Projector Service Expanded by Technicolor

Technicolor, Inc. is expanding service facilities for its line of silent and sound movie projectors.

The enlarged network of warranty service stations to also pair and service the film ca-

within minutes of Chicago's Loop or O'Hare International Airport

Midwest Studios, Inc. has the finest physical facilities in the Midwest for the production of sound motion pictures or videotaping . . . a production man's dream come true! Here, under one roof, is a complete service studio available to any organization.

PHYSICAL DETAILS:

This sound studio has *two* stages. The main sound stage is 100 feet long by 60 feet wide, height to overhead catwalk 30 feet. Catwalks on both sides of the stage 16 feet from floor. Ground level entrance to stage for passenger cars and trucks. Stage is equipped with overhead electric crane. The second stage is 40 feet long and 24 feet wide with a 14 foot ceiling.

OTHER PLUS FACTORS:

3000 amps of 120 volt AC current distributed to stage plugging outlets; hundreds of feet of cable . . . A permanent sweep set, as well as miscellaneous sets and components . . . Sepa-

rate make-up and dressing rooms for men and women . . . Screening room . . . Modern kitchen . . . Carpenter shop with power tools . . . Large fire-proof vault . . . Fully equipped editing room . . . Production office facilities for renting the stages . . . Conference room available for top executives' "office-away-from-office" while working in the studio.

Midwest Studios, Inc. Operational Policies

Midwest Studios, Inc. is owned by a realty corporation and will not compete with its service customers. No production personnel will be employed by the studio corporation. A producer desiring to rent studio space may bring his own personnel and equipment. However, upon request, Midwest Studios will supply or suggest sources of personnel needed, such as directors, set designers, cameramen, sound men, carpenters, painters and other technicians. Talent sources also available. Arrangements may be made through the studio for any and all types of equipment as required.

ridges which all Technicolor projectors utilize. Loading and reloading of Technicolor cartridges with film will, however, remain the exclusive responsibility of Technicolor's recently enlarged network of cartridge loading licensees.

Geographical distribution of the warranty service stations will facilitate more rapid servicing of the Technicolor Instant Movie Projectors and cartridges.

Wometco Acquires Sight & Sound, Inc. in New York

Wometco Enterprises, Inc. has acquired Sight and Sound, Inc. of New York. Sight and Sound serves as an audio-visual systems consultant and supplier for educational, industrial training, and sales operations.

Sight and Sound deals primarily with super 8mm audio-visual systems and equipment. They have worked with IBM Office Products Division in the development of super 8mm film as a field sales tool, and with the Chaplains Corps of the U.S. Navy, AT&T, Western Electric,

Holt, Rinehart & Winston, Technicolor Corporation, and American Cancer Society. In 1968 the company won the Dealer of the Year Award from Technicolor Corporation.

The acquisition of Sight and Sound continues Wometco's expansion in the film industry. With the acquisition of Sight and Sound, Wometco now has companies operating in all phases of the film industry—from production through processing and cartridgeing to distribution of audio-visual hardware.

Capital Film Labs Opens Super 8 City for Loading

Capital Film Laboratories, Inc., has opened a new subsidiary, Super 8 City, in Alexandria, Va., for the loading of super 8 film cartridges.

Sam C. Gale, vice president of sales for Capital, said, "Super 8 City, Inc. is a completely equipped super 8 cartridge loading facility, capable of loading any super 8 cartridge on the market today . . . including Technicolor silent and sound cartridges and

sound cartridges for Fairchild, Jayark, MPO and Bohn-Benton". Gale said that "all reel to reel cartridgeing for the Eastman line and others will be performed by the new facility."

"We anticipate that an appreciable volume of super 8 will be generated by Capital's own processing equipment, but we hasten to add that Super 8 City, Inc. will accept orders from producers and distributors who (because of previous commitments) have printed their material elsewhere".

Super 8 City, Inc. is located at 201 North Washington Street, Alexandria, Virginia 22314.

Gale also said, "Frank Silva, a long time Capital employee, has been named general manager of the new operation".

Silva commented that "Super 8 City, Inc. can handle any client cartridgeing problem from initial cartridgeing through routine cartridge maintenance to re-lubrication and repair".

Gale summarized the new facility as "being one that provides our clients with under one roof super 8 capability. No matter what machine the client uses . . . indeed he may use several . . . our job is to see to it that he gets coordinated lab services from answer printing to cartridgeing."

Mineral Resource Film Bookings at 10-year High

Demand for Bureau of Mines films on wise development and use of the nation's mineral resources increased for the seventh consecutive year in 1968, resulting in the highest annual total of film showings in the past 10 years, the Interior Department reports.

Most Bureau films are produced as cooperative ventures with private industrial concerns or other private or public organizations. The sponsor pays all production costs and provides prints to be circulated by the Bureau on free short-term loan. During the past year, Tennessee became the first State government to sponsor and develop a motion picture cooperatively with the Bureau.

The 35 film titles that make up the Bureau's motion picture library recorded gains in all three methods used in gaging a film's popularity — total number of screenings, actual attendance at group showings, and estimated audiences for public-service telecasts.

Total number of screenings for the year ending December 31, 1968, was 237,338, an increase of almost 40 thousand over 1967.

right off the newsreel . . .

continued

Attendance at group showings, by actual count, was 9,995,419, an increase of more than 1 million. The greatest gain however, can be seen in the size of the reported television audience. This audience reached 10 million last year, up 6.2 million from 1967.

In 1968, for the first time in the history of the Bureau's film program, the TV audience exceeded attendance at group showings. These sharp increases indicate a new public awareness of the important role of mineral resources in the Nation's continuing development, the Bureau said. This growing public awareness is further illustrated by the demand for the film *Copper, the Oldest Modern Metal*, which was shown to more than 16,000 audiences during 1968, another "first" for a Bureau motion picture.

The 10 Bureau films most in demand during 1968 and the number of times each was shown are: *Copper, The Oldest Modern Metal* (16,087); *Arizona and Its Natural Resources* (13,388); *California and Its Natural Resources* (13,207); *The Petrified*

River—The Story of Uranium (13,178); *Steelmaking Today* (12,670); *The Magic of Sulfur* (12,306); *Washington and Its Natural Resources* (12,157); *Alaska and Its Natural Resources* (11,016); *Helium* (9,758); *Aluminum: Metal of Many Faces* (9,592).

Complete information about the Bureau's film program may be obtained from Motion Pictures, Bureau of Mines, 4800 Forbes Ave., Pittsburgh, Pa. 15213.

Eastman Kodak Awarded Freedoms Medal

A Freedoms Foundation award in the Economic Education category was presented to Eastman Kodak Company recently for the company's role in a Rochester (N.Y.) urban improvement program.

The citation is the major national award in the Economic Education category. The award honors Kodak's role in the formation of Rochester Business Opportunities Corporation—which, the foundation said, exemplifies

"community development through private initiatives."

Rochester Business Opportunities Corporation (RBOC) is an organization set up in 1968 in Kodak's home city of Rochester, N.Y., to help improve urban conditions.

According to Frederic S. Welsh, a Kodak vice-president: "What RBOC does is provide the needed doses of cash and counseling to help people of the inner city start up and run their own businesses profitably."

Kodak received the George Washington Honor Medal, a four-inch medal encased in a seven-inch square block of lucite. The award says of RBOC: "Using compensatory capitalism as its byword, it enabled minority group members to establish and maintain their own profit-making businesses."

Berkey Pathe to New Site, Crane Heads Labs

Berkey Pathe, division of Berkey Photo, Inc., has moved its corporate headquarters to a new location in New York City, and has named Robert Crane to head both New York City processing laboratories.

Manuel A. Casiano, Jr., Berkey Pathe president, announced

that, effective March 3, 1968, the division's new corporate headquarters are located at 3 West 54th Street, New York, N.Y. 10019, site of Berkey Pathe-54th Street Laboratory.

Robert Crane, president of the 54th Street Laboratory, has been named president and general manager of both the 54th Street Laboratory and Berkey Pathe-45th Street Laboratory. The Berkey Pathe laboratories offer complete processing and printing for 35mm and 16mm films, the theatrical and television industries and industrial films.

Audio Opens New NY Production Facility

Audio Productions, of New York, California and Canada, has acquired a new production facility at 128 East 41st Street as part of the current expansion of the company's production capability.

Peter J. Mooney, Audio president, announced that the 8,000 square-foot complex of editing, screening and production conference rooms, to be known as Audio East, has been undergoing extensive renovation and modernization and is now ready for operations.

Hyndman Retires, Simmons Named As Successor

Donald E. Hyndman, a Kodak assistant vice president and general manager of the motion picture and education markets division retires May 1, 1969 after a distinguished career with Kodak since 1926.

Hyndman has been manager of Kodak's Motion Picture film departments on both the east and west coast.

Election as assistant vice-president in 1962 was followed by appointment as general manager of the motion picture and education markets division in 1964. In 1965, he was named director of marketing in the New York region followed in 1966 by appointment as manager of

product planning for the motion picture and education markets division in Rochester.

Dr. Norwood L. Simmons, who is now manager of product planning for the division will succeed as general manager.

Foster Named to Head F&B/Ceco in Florida

Harry Foster has joined F&B/Ceco Studios of Florida Inc. and is in complete charge of all studio activities and facilities and will supervise construction of more sound stages. As an officer of F&B/Ceco, Foster will be available for consulting in all phases of production and post-production.

Mitchell Camera Names Snider Executive VP

Glen R. Snider has been appointed executive vice president of Mitchell Camera Corporation.

Snider was manufacturing manager and deputy of the Electronic Division of Otis Elevator Company after serving as principal engineer and laboratory coordinator, manufacturing engineering representative and engineering designer with the Republic Aviation Division of Fairchild Hiller.

Bernhard Appointed VP for Project 7 Business Affairs

Richard Bernhard will oversee production for Project 7's industrial and film strip wings in

addition to his corporate duties since his appointment as vice president in charge of business affairs.

Wagner, Behrens Head New Superscope Division

Veteran radio and TV personality and producer Jack Wagner has been named executive producer-artists and repertoire for the newly formed recording division of Superscope, Inc.

In his new post, Wagner will be responsible for gathering material purchasing masters and supervising the recording and programming of all products.

Bob Behrens, previously special projects writer for Super-

Thinking about having a movie made?

Ask for your copy of . . .

33 QUESTIONS AND ANSWERS ABOUT INDUSTRIAL AND BUSINESS MOVIES

Movies are a powerful, persuasive, often overlooked medium — a medium that can help your company sell an idea, a product, or a service. But before you have a film produced, there are many facts and figures you should have at hand.

Write or phone for your copy of "33 questions and answers about industrial and business movies." It includes answers to questions such as:

- * My business is complicated and different — Could I really expect an outsider to write a good script?
- * How much does a good film cost?
- * Could we use some of our own people in our movie — engineers, technicians, service men?
- * How long will our movie stay up to date?
- * Are filmstrips just as good as movies?
- * We have a young man who is good with a camera. Why couldn't we shoot our own film, and have our advertising department write the script?

PILOT PRODUCTIONS, INC.

Producers of motion pictures and filmstrips

1819 Ridge Avenue • DAVIS 8-3700 • Evanston, Illinois

camera eye . . .

continued

Make a start by looking at films and filmstrips, getting acquainted *on the screen* with the best (and worst) that's being done in your field and by other industries. Share these previews with your associates in management. Let them be aware that the competition is improving training, developing goodwill and making more sales through effective use of audiovisuals.

There's no reason to shy away from "rolling your own" in the production of basic 8mm (Super) motion pictures. Many companies have learned to put together 35mm slide programs; some have equipped salesmen in the field with automatic 35mm still cameras and/or 8mm cameras to develop material for company reports.

Transparencies are also fairly easy to produce and their wide-spread use by thousands of firms indicates the value of this tool for corporate reports, management meetings, etc.

Of course, you'll be tempted to believe that many of your audiovisual needs can be met by acquiring videotape recorder/reproducers and accompanying electronic camera gear. And this tool has proven extremely useful in many companies. But we believe that learning about sight/sound values can begin on a more basic, less costly-level. The first, most primary tool (aside from 16mm sound projection of available films) is the 35mm continuous slide projector for which 35mm slides are made of corporate material. It's the least expensive way to get started and one of the most effective.

The inevitable question will come up: somebody in management, perhaps at the top-level, will say: "but we need a good professional company film on this subject!"

Assuming that your state of professional readiness is not equal to that of Ford, General Motors, the Bell System or similar long-time users of motion pictures of top-category content, look to the experienced professional producer for counsel and costs.

This "commercial" naturally follows: the most dependable single source for selecting a producer for your upcoming film, filmstrip or sales meeting is this Annual Production Review issue of BUSINESS SCREEN. It contains detailed listings-in-depth of hundreds of specializing producers of these media, including makers of most television commercials. You get this Big Book of Business and TV Film Makers as part of your annual subscription. Thousands of other copies will cost recipients only \$2.00.

But, meanwhile, new people coming into new jobs everywhere in business, industry, trade groups and government will benefit by "getting acquainted" with the best that's being done in sight/sound media, getting started with basic production of simple tools and by getting them shown where they can do the most good. —OHC

U.S.C. graduate Richard Moore co-founded Panavision Inc., and was Executive Vice-President in charge of design and development.

**Director of Photography
Richard Moore has shot
seven Hollywood features.**

**He used to be Executive
V.P. at Panavision, in
charge of camera design.**

**Shooting the President's
Far East tour for the USIA,
he chose to use an NPR.**

Mr. Moore writes: "Most of my work has been done on Hollywood sound stages with a full union crew, adequate light and a 35mm Mitchell. But flying with the President to the Manila Summit Conference and around the Far East, each of us was allowed 300 pounds of baggage, including camera and every foot of rawstock for the entire tour! That meant 16mm.

The U.S. Information Agency wanted sync sound documentary footage of the Presidential tour for distribution abroad, and in color. Although I was to be a member of the six-man Presidential pool of "privileged" photographers, people with experience in this sort of thing told me that much of the time I would be jockeying for position with thirty or so other still and movie cameramen. Quite a mess. But the subject matter and the

overseas locations were intriguing, the money was good, and shooting as a journalist under these conditions presented a new type of challenge; so I took the job.

The first day of shooting in Honolulu confirmed my choice of camera for this assignment. Working in crowds, the camera had to be compact. And for following sudden moves, the camera had to be more than just light and easily handheld. You also had to be able to see where you were going. With the NPR's low profile, I knew that if I could get through the doorway or whatever, so could the camera; and the low magazine didn't block my view to the right side.

But it was the quick-change magazine format that had chiefly led me to pick the NPR for this job. I kept three loaded magazines, a changing bag and three spare film rolls

with me at all times. If the film ran out in mid-action, I was able to whip on another magazine in seconds. When the President moved suddenly indoors, I was able to switch immediately to a faster film, literally as we followed him inside. I was even admitted into the President's private office aboard Air Force One to shoot candid footage of him at work; and I can assure you that interruptions weren't tolerated long in there. You couldn't have got that footage without a completely unobtrusive camera."

For an NPR brochure, write Eclair Corp., 7262 Melrose, Los Angeles, Calif. 90046.

Eastman Kodak Unveils 1969 Capital Spending

Eastman Kodak Company has budgeted \$272 million — an all-time high — for capital expenditures in the United States in 1969. The amount is \$54 million higher than the estimated 1968 outlay.

The funds will provide for additions, replacements, and improvements in the company's facilities in this country.

William S. Vaughn, chairman, and Louis K. Eilers, president commented in a statement:

"The 1969 investment program is planned to meet the burgeoning needs of our customers. It is designed to provide the additional manufacturing and distribution facilities and the new and improved equipment so important to maintaining capacity, quality, and efficiency."

The \$272 million U.S. budget includes: \$175 million for facilities in the Photographic divisions, of which about \$138 million is allocated in the Rochester, N.Y. area; and \$97 million for the Eastman Chemicals Division.

Among major projects in the U.S. budget are:

- Additions to photographic film and paper making capacity at the Kodak Park Division in Rochester, N.Y. These include units for film casting, and for film and paper emulsion coating and finishing of both film and paper. Other new units are for the Photographic Technology Division, Film Testing Division, and utilities, the latter including increased power capacity, improved incineration facilities, and a new water treatment plant. A major new distribution center is

planned.

- Start of construction of a photographic manufacturing plant near Windsor, Colorado.

- Continuation of construction and equipping of units at the Kodak Apparatus Division Elmgrove Plant near Rochester.

- Continuation of construction of the Riverwood Marketing Education Center in the Town of Henrietta, N.Y., a suburb of Rochester; expansion of regional distribution facilities in several locations in the United States; and the consolidation of New York regional marketing facilities in Manhattan.

- Expansion for the Eastman Chemicals Division includes an increase in Kodol and Verel fiber and acetate yarn capacity at Tennessee Eastman Company, Kingsport, Tenn.; increased acetaldehyde capacity and an additional hydrocarbon cracking plant at Texas Eastman Company, Longview, Texas; and additional supporting facilities for increased power capacity in both Tennessee and Texas.

In the past five years Kodak has invested about \$830 million in capital improvements in the United States. Of this, \$505 million has been invested in the Photographic divisions and about \$325 million in the Eastman Chemicals Division.

\$88 Million outside U.S.

Kodak has budgeted \$88 million for 1969 capital expenditures by its associate companies outside the United States. This is an increase of \$23 million over the estimated 1968 expenditure of \$65 million.

DEPARTMENT OF AGRICULTURE

Office of Information Motion Picture Service

Washington, D. C. 20250

• The Motion Picture Service of the USDA produces motion pictures in color and black-and-white on agricultural and related subjects for various agencies within the Department and, on occasion, for other Government agencies. Production and laboratory services are also available on a cooperative basis with land grant colleges and universities.

Martin Lobdell, *Chief Motion Picture Service*
Phone: DUDley 8-6072

Homer Boor, *Producer*
Phone: DUDley 8-3628

Judd Scott, *Producer*
Phone: DUDley 8-6518

James E. Alford, *Chief of Distribution*
Phone: DUDley 8-5246

Mrs. Anne Ware, *Stock Footage Librarian*
Phone: DUDley 8-3629

ACTIVITIES: The USDA currently has more than 300 films in distribution with an estimated audience of 380 million persons. These films cover such subjects as conservation, forestry, agricultural research, insect eradication, control of animal diseases, consumer information, rural area development, nutrition and marketing. Maintains an extensive 16mm color stock footage library of agricultural scenes which are for sale at nominal cost.

FACILITIES: The USDA Motion Picture Service has complete in-service production and laboratory facilities which have been in continuous operation since 1912.

DISTRIBUTION: Films for school and group showings are distributed through 69 cooperative film libraries located in each state. Films for TV bookings are distributed directly from the Distribution Section, and prints of most films may be purchased from the Business Management Section. Catalogues are available of motion pictures, films suitable for TV showing, and of stock footage scenes.

PUBLICATIONS: Two catalogs contain complete listings of USDA motion pictures; one of these provides data on films for general 16mm distribution; the other lists films available for public service showings by television stations.

UNITED STATES ATOMIC ENERGY COMMISSION

Division of Public Information Audio-Visual Branch

Washington, D.C. 20545

• The Audio-Visual Branch of the Atomic Energy Commission has as its primary function responding to requests from the public media in all the audio-visual fields for assistance in the preparation of films, stills, tapes, slides and other audio-visual materials on atomic energy.

Edwin L. Wilber, *Branch Chief*
Phone: (301) 973-5365

Elton P. Lord, *Deputy Chief*
Phone: (301) 973-5476

Sid L. Schwartz, *Asst. to the Chief*
Phone: (301) 973-4239

James E. Westcott, *Photographer-Editor*
Phone: (301) 973-5477

Jon Fogel, *TV-Radio Specialist*
Phone: (301) 973-4483

ACTIVITIES: This branch plans and carries out film, TV, radio and still picture projects to advance specific Commission Programs, and acts as advisor to Commission and contractor personnel in Washington and nationwide on audio-visual problems and projects. In 1968, 12 films were produced by the Commission and its contractors; about 12 films are planned for 1969. In addition, TV clips and radio tapes are produced by the Commission and contractors every year. This branch also places Commission- and contractor-produced motion pictures into loan and commercial sales channels, determines the content of the 10 domestic and 9 overseas film libraries, and issues popular-level and professional-level films lists.

FACILITIES: AEC has no motion picture production facility or motion picture laboratory, but uses Government and/or commercial services.

DISTRIBUTION: AEC operates an 8,000 still photo library, is setting up a 35mm color slide library, and distributes 11,100 16mm prints through 10 domestic film libraries which cover particular geographical areas. All films are for free-loan. Each library has about 320 titles (education-information, technical-professional, and historical). The Commission also has four overseas libraries at its offices at the U.S. Embassies at London, Brussels, Tokyo and Buenos Aires, stocked with educational and technical films, and also supplies films to the film library of the International Atomic Energy Agency in Vienna, The American Film Library, The Hague, Holland, The Puerto Rico Nuclear Center, and to USIS-Stockholm for use throughout Scandinavia. The Brussels and Buenos Aires libraries have about 80 films each in French and Spanish respectively. Information on libraries available from Washington office.

STOCK FOOTAGE: The Commission has more than 120,000 feet of 35mm black-and-white unedited film footage on peacetime uses of atomic energy available for purchase. Information may be obtained from Washington office. Color stock footage is also available from any of the completed documentary films produced by or sponsored by the government. Films may be borrowed from libraries in geographical areas for footage counts prior to purchase of duplicating materials from the various laboratories holding the originals. Unedited stock film footage in black-and-white and color on nuclear or thermonuclear detonations sold at Lookout Mountain Air Force Station, USAF, 8935 Wonderland Avenue, Hollywood, California 90046.

DEPARTMENT OF COMMERCE

Washington, D. C. 20230

• The U.S. Department of Commerce produces and circulates motion pictures dealing with those domestic and foreign subjects relating to the offices under the jurisdiction of this Department.

Business & Defense Service Administration

• The Motion Picture and Photographic Products Branch of this Division serves the motion picture, photographic, and audio-visual equipment and supplies industries. Its primary function is to foster, promote, and develop the foreign and domestic trade of these industries. It provides market development counsel to producers and exporters on where and how to cultivate and expand their sales. It participates in tariff and trade negotiations, maintains information on foreign trade trends, and periodically issues basic trade statistics on U.S. exports and imports of photographic goods. The

To our Clients:
On March 5th, 1969, our Company
adopted a new official name

Dynamic Films, Inc.

IS NOW

The new name reflects a change in corporate structure that is designed to provide a greater variety of communication services.

When we went into business 21 years ago, film making was just film making. The world has changed since then and we have changed with it. At 21, you better be with it!

**Remember our new name: you will
be hearing it often!**

Our address and
phone number
remain the same:

680 West 57th Street • New York, New York 10019 • (212) 755-1100

The personal touch in business is fine, up to a point. But we don't believe in finger-printed lenses. When you rent a camera from Victor Duncan, there are *other* things you won't find. Like a poorly-mounted lens to throw your focus out of kilter. Like a torque motor without enough torque to take-up. Or any of a dozen things that can gum up your schedule and blow the budget. * * * Whatever your needs, when you rent from Victor Duncan you know that your outfit is clean, inspected and tested . . . checked and double checked. Everything works! These days that's no small order. But to us it's mighty important. And we're sure it's important to you.

the check and double check people

Branch acts as a focal point for industry with reference to advice and guidance to other agencies and use of other agency facilities.

**Environmental Science
Services Administration (ESSA)**

Stanley B. Eames, *Director of Public Information*

George A. (Jeff) Baker, *Radio/TV/Film Officer*

Phone: (301) 496-8243

• ESSA's centralized film development office within the Office of Public Information administers and supervises production of informational and educational films for all components of the Agency. Film and tape spots, short and special features for both radio and TV are also under the direction of this office.

ESSA's film library now combines film formerly distributed by the U.S. Weather Bureau, the U.S. Coast Guard and Geodetic Survey, and the Ionospheric Propagation Laboratory of the Bureau of Standards. Distribution of these films is handled by Modern Talking Picture Service, and requests should be directed to them.

Inquiries about ESSA film, radio and TV activities should be directed to: Environmental Science Services Administration, U.S. Department of Commerce, Washington Science Center, 6010 Executive Blvd., Rockville, Md. 20852. Attention: PI.

DEPARTMENT OF DEFENSE

**Office of Public Affairs Directorate for
Defense Information — Audio-Visual Division**

The Pentagon, Washington, D.C. 20301

• This Division of the central Armed Forces contact for news media and producers in the important fields of radio, television, still pictures and motion pictures. Direct contacts on national and international release matters in these fields are:

Norman T. Hatch, *Chief, Audio-Visual Division*

Phone: OXford 7-4162

Donald E. Baruch, *Chief, Motion Picture Productions Branch*

Phone: OXford 7-4596

Russell W. Wagner, *Chief, Radio-Television Productions Branch*

Phone: OXford 5-0168

Lt. Col. Daniel M. Hill, USAF, *Chief, Audio-Visual News Branch*

Phone: OXford 7-6161

ACTIVITIES: The Audio-Visual Productions Branch approves release of Armed Forces stock footage which cannot be procured commercially and assists studio motion picture and independent producers in the production of entertainment and documentary films and theatrical productions relating to the Armed Forces. Information on Armed Forces films available for public non-profit showing or cleared for public service TV programs can be obtained from the Branch.

The Radio-Television Productions Branch approves release of Armed Forces stock footage which cannot be procured commercially and assists network and independent producers in the production of documentary and entertainment programs related to the Armed Forces.

The Audio-Visual News Branch releases approximately 200 (2-3 minute) subjects to the TV and theatrical newsfilm media annually. It maintains two small Pentagon studios for servicing the news media and radio programs which feature interviews with top Defense officials. It also releases taped and filmed messages by Secretaries and Service Chiefs and provides ad-

Cartridge Loading VideoTape Playback:

**50% cheaper
than the kind
you have to
thread.**

How do you take advantage of the lower costs of videotape production without turning around and blowing the budget on an extensive playback system? Transfer the tapes you want to keep to sound film. There's a transfer machine available that makes the process practical even for one print. Or for large orders, there are the film labs, ready and waiting. Either way, your tape reduces right down to Super 8 size, and fits into our MoviePak® cartridge, soundstripe and all. Pak it into a Fairchild Mark IV rear screen projector, push a button and you've got instant videotape replay. Without any threading. And without any patch cords. At 22 pounds, it's very portable. There's a recording option for changing soundtracks, earphones for listening to it even in the library, and a service dealer nearly everywhere you look. A Mark IV, with options, costs about half of what you'd have to spend for just one monitor and the lowest priced VTR. And it's a lot more flexible. Especially when you consider that thousands of films for training and education are already available in MoviePaks. Activate the coupon to get the whole picture.

vice and guidance to radio and TV news producers. The Branch also releases to the press and TV media approximately 2,000 photographs each year.

DEPARTMENT OF DEFENSE

Defense Supply Agency: DSA Administrative Support Center

Technical Presentations Division
Cameron Station, Alexandria, Virginia

• Technical Presentations Division, DSA Administrative Support Center, is the technical source and point of contact for the production of films for the Defense Supply Agency. DSA's headquarters staff at Cameron Station and 25 primary level field activities furnish technical information for the films. The projects are aligned with the primary objective of the agency, mainly, to provide effective logistic support of the operating forces of all Military Services in war and peace.

ACTIVITIES: This division carries out a wide variety of activities, including audio-visual communications, motion picture productions, technical and informational exhibits, still picture photography, and graphic presentations. The range of in-house staffing allows the division to contribute materially to the production of DSA films.

FACILITIES: DSA has no motion picture production facility or motion picture laboratory, but uses Government and/or commercial services. The key personnel of Technical Presentations Division is as follows:

Chief, Morris S. Namkin
Phone: (202) 694-6075
Deputy, Mary E. Kennedy
Phone: (202) 694-6077
Adm. Officer, Robert W. Henderson

DEPARTMENT OF THE AIR FORCE

The Pentagon, Washington, D.C.

• The U.S. Air Force produces approximately 100-500 reels of film each year by contract with commercial producers or in-service. These films are used by all levels of management for education, training and informational briefings.

ACTIVITIES: Headquarters, USAF at the Pentagon, Washington, D.C. The management focal point within the Air Staff for all photographic and closed circuit television policy is the Audio-Visual Systems Division, Directorate of Operations. Complete address is:

Hq. U.S. Air Force
AFXOTV

Washington, D.C. 20330
Phone: ONford 5-2830

Col. Alterio Gallerani is chief of the division. The office is responsible for determining or validating requirements for all Air Force motion pictures and insuring that the capability exists within the Air Force to either procure them by contract or produce them in-service. In this respect, they monitor the Aerospace Audio Visual Service, a technical service under the Military Airlift Command.

In charge of the program at the Military Airlift Command Hq. is Lt. Col. Robert J. Arblaster. Complete address is: Hq MAC (MAXPDV), Scott AFB, Ill. 62225. The Aerospace Audio-Visual Service is directly responsible for pro-

ducing or procuring films, adequate photographic documentation of the total Air Force mission and distribution of release prints. The complete address is: Aerospace Audio-Visual Service, Norton AFB, Calif. 92409. Col. William E. Nix is the Commander. Specific information concerning the service of AAVS or its commercially produced motion pictures may be obtained from: AAVS (AVODC), Norton AFB, Calif. 92409. Phone: (714) 382-2673.

FACILITIES: Complete motion picture production facilities are located at the Audio-Visual Center, Norton AFB, Calif. A television production capability is to be completed in the near future.

AAVS is responsible for contract procurement and commercial production of U.S. Air Force films. The USAF Motion Picture Film Depository, a film archive housing historical and current films, is also located in the Audio-Visual Center.

The AAVS is documenting Air Force activities worldwide through a unit in Southeast Asia and widely dispersed photographic flights and detachments. It is also providing audio-visual services to a number of Air Force major commands and agencies around the globe, operating optical instrumentation systems, television production systems, gun and strike camera systems on fighter aircraft, and base support photographic laboratories.

Specific information regarding the Commercial Production of Air Force films may be obtained by contacting:

Hq AAVS (AVODOMIC)
Norton AFB, Calif. 92409
Phone: (714) 382-2350

DISTRIBUTION: Approved Air Force films, filmstrips and related visual aids are distributed by the Aerospace Audio-Visual Service (MAC) through the film library of the Audio-Visual Center. This facility routinely distributes 360,000 films per year to Air Force units and other

agencies all over the world. The present active inventory consists of nearly one-half million prints of more than 6,000 separate film subjects. The Film Library also maintains overseas central Film Libraries located in Germany, Panama, Japan and Alaska, with a Branch Film Library in the United Kingdom. These libraries are strategically placed and stocked to service approximately 140 Base Film Libraries located throughout the world. Information regarding distribution of these films can be obtained by contacting:

Hq AAVS (AVOAS)
Norton AFB, Calif. 92409
Phone: (714) 382-3255

DEPARTMENT OF THE ARMY

Washington, D.C. 20315

• The Assistant Chief of Staff for Communication-Electronics of the Army is responsible for coordination, review and supervision of all audio-visual activities to include motion picture and still photography, television and electronic display. As the DA staff contact point, all film programs are coordinated by the Audio-Visual Division of the Office of the Assistant Chief of Staff for Communications-Electronics. Information pertaining to pictorial, television and film distribution and utilization activities may be obtained from the following:

Colonel Stanford Roberts, *Chief, Audio-visual Division*

DuKane CASSETTE COMMANDER

BATTERY OPERATED · AUTOMATIC TAPE CASSETTE · SOUND FILMSTRIP PROJECTOR

The new DuKane Cassette Commander is the latest, most advanced, audio visual sales tool on the market. This powerful selling tool is completely *automatic* and battery powered so you can present your sales message anywhere, anytime. You can present a hard hitting sales story on the desk of a busy executive or at a construction site miles from the nearest electrical outlet. Just push the button and automatically your sales presentation comes to life with brilliant pictures and exciting sound. If you want to stop the program to point out a key feature or answer a question, just push the stop button and the picture and sound instantly stop.

This unit will capture the interest and attention of even the toughest buyer and will present your story with maximum impact and effectiveness. Costly selling time is reduced, providing time for more calls and more sales. When your sales presentation is finished, the unit automatically shuts off and is ready for your next sales call in seconds. The Commander is light in weight and perfectly balanced for easy carrying. Its attractive case looks and feels like fine leather. If you are looking for the most modern, effective sales tool ever developed, look to the Cassette Commander.

DUKANE CORPORATION

and technicians, maintaining high standards of quality for Navy productions. The processing division has the capability to develop and print negative film and release prints in 35mm and 16mm black-and-white and negative-positive color. About 75 percent of all Navy films, however are contracted with established commercial producers.

a wide range of subjects covering the period from 1896 to the present.

Films are not loaned, but may be viewed by researchers, film producers or their authorized representatives. Duplicate negatives or masters of films or scenes may be purchased by individuals or producing companies subject to

DuKane CASSETTE COMMANDER

BATTERY OPERATED

*automatic sound filmstrip projector
with tape Cassette sound.*

Model No. 28A12

FEATURES

SIMPLICITY OF OPERATION. To operate the Commander just push the START button and instantly your exciting Sight and Sound sales presentation begins. There are no cords to worry about or outlets to look for, so you can present your story anywhere. When your program is finished, the unit automatically stops and is ready for your next call in seconds.

BATTERY POWERED. The nickel cadmium battery pack provides complete power for your sales presentations. Plug the retractable power cord into an AC outlet for overnight charging or for direct operation on AC current. Special safety circuit protects against overcharging.

AUTOMATIC OPERATION. Pictures are changed automatically and are kept in perfect synchronization with the sound by means of an electronic 50Hz. signal recorded on the tape.

TAPE CASSETTE. Easy to use and low in cost the Cassette provides outstanding high quality sound reproduction. The Cassette has brought new convenience and dependability to tape playing. It loads or unloads in the projector in a second and there is no need to thread or handle the tape.

PROGRAM HOLD CONTROL. Push down on the stop button and both picture and sound instantly stop, providing you with complete control over the program, at all times. Ideal for pointing out your products key features and benefits or to answer questions. Push the start button and your program begins right where you left off.

EASY TO CARRY. The unique design and light weight of the Cassette Commander makes it the ideal all-around sales tool. Elegant in appearance and ruggedly constructed for hard use.

BRILLIANT SHARP PICTURES. A highly efficient optical system and direct rear projection provides maximum brightness and clarity. The high intensity non-glare screen eliminates the need of any room darkening. Pictures are always in perfect focus.

QUALITY SOUND. All transistorized amplifier and high quality Cassette tape player provide the ultimate in listening enjoyment and dependability.

SPECIFICATIONS

FILM: Projects standard 35mm single frame filmstrip. Film capacity 28-160 frames. Spliced in a continuous coil on DuKane E Wire film holder part #374-104.

TAPE: Cassette loaded. Maximum playing time 30 minutes per side with DuKane approved Cassettes.

LOADING: Simply snap the convenient tape Cassette and E Wire film holder in place . . . frame the picture and you are ready to show the film.

BATTERY PACK: The rechargeable nickel cadmium battery pack provides complete power for your Audio-Visual presentation. Overnight recharging completely restores battery power. Batteries charge automatically whenever the retractable power cord is plugged into an AC outlet. Special safety circuit eliminates overcharging.

TAPE PLAYER: Special Cassette player provides maximum dependability and ease of operation. Driven by a long life DC motor with solid state regulator for precise speed control. Tape speed: 1 7/8 i.p.s. Tape head can easily be cleaned. Designed for playback purposes only so tapes cannot be accidentally erased.

PROJECTOR: Special DuKane Automatic 35mm filmstrip projector. Direct rear projection for maximum brilliance and sharpness. Precision framing with locking action. High torque DC film advance motor for fast, quiet operation. Highly efficient optical system with pre-focused 1" focal length lens. Convection cooled. Film carrier opens for easy loading and is teflon coated for smooth operation and long film life.

LIGHT: Long life 300 hour 12 volt pre-focus base automotive type 1507 lamp. Spare lamp holder included.

AMPLIFIER: All transistor provides instant sound and excellent fidelity. Top located 3 x 5 speaker for best sound coverage. Amplifier also provides sensing system for automatic film advance and shut off. Safety fused power supply.

POWER: 117 volt, AC current, 50 or 60 cycles.

SCREEN: 6 1/2" x 5". High brilliance Polacoat non-glare screen.

SIZE: Height: 10"; Length: 15 1/2"; Width: 7"—With battery pack; 11 1/2" high. Weight: 12 3/4 lbs. With battery pack 17 lbs.

CASE: Molded scuff-proof high impact plastic with carrying handle.

WARRANTY: Covered by DuKane One-Year warranty available through the nationwide network of authorized DuKane Service Stations.

OPERATION: The Commander Model 28A12 operates on standard 117 volt AC current, as it does not contain batteries. The Model 17A112 Battery Pack is available as an accessory if you desire to add battery power to the 28A12. No modifications or tools are necessary to add the battery pack.

Model 28A12 Shipped *without* battery pack for AC current operation only. **PRICE: \$250.00**

Model 17A112 Rechargeable nickel cadmium battery pack for Cassette Commander allows either battery or AC operation. (when ordered with projector) **PRICE: \$80.00**

ACCESSORIES

COVER: Protective cover with storage pocket on side for sales literature. Part #128-31. **PRICE: \$5.00**

BATTERY PACK: Rechargeable nickel cadmium battery pack. Can be added to AC current Model 28A12 to provide both battery and AC current operation. Part #17A112. (when ordered separately) **PRICE: \$95.00**

This system is composed of three segments: (1) the Audio-Visual Division, OACSC-E; (2) the Distribution Branch of the Army Pictorial Center; and (3) the network of Audio-Visual Support Centers located at headquarters major commands, major service schools and throughout the Zone of the Interior and overseas commands.

DEPARTMENT OF THE NAVY

Washington, D.C. 20360

The U.S. Department of the Navy produces motion pictures and still photographs for such purposes as training, maintaining fleet readiness, explaining new weapons and devices, and for medical, historical, indoctrination, safety and recruiting uses, public relations, to name a few key subject areas.

Information and General Policy Procedures on all aspects of the Navy film program, including application information for commercial producers interested in bidding on Navy contract films, are handled by the Commander, Naval Air Systems Command (AIR-5393), Navy Department, Washington, D.C. 20360.

Capt. D. A. Lane, USN, Code (AIR-539)
Director, Photographic Division
Phone: OXford 3-3416

E. L. Randel, Code (AIR-5393) *Head, Training Film & Motion Picture Branch, Photographic Division*
Phones: OXford 3-3470, OXford 3-3472

Procurement policies and procedures, which involve information on technical questions regarding bids, are handled by the Officer in Charge, Navy Purchasing Office, Washington, D.C. 20390.

Cdr. Donald A. Needham, USN, *Officer in Charge*
Phone: OXford 3-2901

LCdr. O. T. Fleisher, Jr., USN, *Director Purchase Division*
Phone: OXford 3-2845

FACILITIES: The U.S. Naval Photographic Center, a field activity of the Naval Air Systems Command, is the central photographic laboratory for the Navy Department and the Navy's largest photographic activity. The Center, composed of about 550 military and civilian personnel, provides photographic assistance and specialized services to the entire Naval Establishment, supervises the production of Navy training films and maintains the Navy's motion picture and still photographic film libraries and motion picture distribution division.

The motion picture production facilities at the Center are modern and complete. There is a sound stage, film and tape recording and mixing equipment, an art and animation group and editorial branch. Here experienced script writers and artists collaborate with Navy photographers and technicians, maintaining high standards of quality for Navy productions. The processing division has the capability to develop and print negative film and release prints in 35mm and 16mm black-and-white and negative-positive color. About 75 percent of all Navy films, however are contracted with established commercial producers.

In addition, there is a growing requirement for films to report on the Navy's research and development activity. To meet this need, a TV closed circuit kinescope facility has been installed. Two video tape recorders and kine-recorders together with visomat processing make for rapid completion of urgent films.

Extensive libraries of both still and motion picture photography are maintained at the Center. Library services are provided to the Naval Establishment, other government agencies and to commercial concerns on a cash sale basis. The Still Picture Department produces all types of still photography such as press, serials, murals, and official portraits. Modern continuous roll paper printing and processing units meet the Navy's large volume print demands. There are also complete negative, positive and transparency color processing facilities.

A research and development group conducts tests, experimentations, development and evaluation of photographic equipment. Here, technical photographic specifications, instructions and other publications are also prepared. Information about NPC may be obtained from: Commanding Officer, Naval Photographic Center, U.S. Naval Station, Washington D.C. 20390

Capt. J. J. Crowder, USN,
Commanding Officer
Phone: OXford 3-2101
Capt. C. D. Longo, USN, *Head Motion Picture Department*
Phone: OXford 3-2142

DISTRIBUTION: Prints of all Navy films available to the public can be purchased from DuArt Labs, Inc., 245 W. 55th St., New York, New York, under an annual contract administered by the General Services Administration. Civilians may borrow films from Naval District Public Information Officers, Training Aids Libraries, Aviation Films Libraries, Recruiting Stations and Public Information Offices located throughout the United States will serve government requests for film showings. Requests for the use of Navy stock footage in commercial productions should be submitted to the Chief of Information, Navy Department, Washington, D.C.

sent of the depositing agencies and copyright restrictions, if any.

At the Washington National Records Center in Suitland, Md., The National Archives and Records Service also stores and services pre-print materials of current motion pictures produced by or for Federal agencies.

The National Archives and Records Service now operates a Central Audiovisual Service Center for agencies of the Federal Government and the general public. Its Central Audiovisual Information Point serves as a clearinghouse for all audiovisual materials produced by the Government. Its Central Audiovisual Sales Point serves as the main source for the purchase of copies of Government motion pictures, film strips, and other audiovisual materials available for sale to the public. Its Central Audiovisual Distribution Point offers selected Government audiovisual materials to the public on free loan.

U. S. DEPARTMENT OF HEALTH, EDUCATION AND WELFARE Washington, D. C. 20202

• The Media Services and Captioned Film Branch administers a program of educational media under P. L. 85-905, as amended by P. L. 87-715 and P. L. 89-258. These laws provide for promoting the general welfare and the educational advancement of deaf persons. Media Services and Captioned Films furnishes a free loan service of films for the deaf; conducts research in the use of films and other educational media for the deaf; produces and distributes films, filmstrips and related media for the deaf and for persons who work closely with the deaf (parents, employers, etc.). The branch also provides for the training of persons in the utilization of these materials and provides media equipment to most schools for the deaf.

Further expansion to provide media services to all types of the handicapped was made possible by enactment of P.L. 90-247. Actual page 38

FILM MUSIC INC.

25 W. 45, N. Y., 586-6673 SEND FOR CATALOG

This film wasn't born yesterday.

It just looks that way. Why? Because, it's been rejuvenated by Rapid Film Technique.

Sure, it was in bad shape when it came to Rapid, but we made it like new again.

Fact is, most film being scrapped today can be salvaged. There's no need to order expensive new prints.

Whatever the condition of your film, Rapid can repair, restore and rejuvenate it.

No matter how scratched, brittle, oil-stained or dirty it is. No matter how badly spliced. Or Torn. Rapid can give it new life.

That goes for color as well as black and white: 8, 16, and 35mm.

What's more, after we've revitalized the film we give it a special protective coating that resists future damages.

So why spend a fortune on new prints? Come to Rapid Film Technique and renew your old ones.

Send for your FREE Trial Certificate today and see for yourself what dramatic effect rejuvenation can have . . . on your films and to your budget!

tribution, and Reference Branch

ACTIVITIES: The National Medical Audiovisual Center plans, directs, conducts and coordinates a national program in biomedical communication. It operates the central installation in the Public Health Service for development, production, distribution, evaluation and utilization of motion pictures, videotapes, and other audiovisual forms.

In addition to its production program, the Center, through a newly established educational program, provides consultation and assistance to schools of the health professions, and is responsible for the development of specialized conferences, seminars and workshops. A re-

cently established audiovisual systems planning activity concerns itself with the development of communications systems in a wide variety of health and health-related institutions.

Under the leadership of the School of Medicine at Tulane University, the Center is participating in a graduate program in biomedical communication which began in Fall, 1967. The curriculum was developed through a consortium of institutions of higher learning, and is sponsored by an initial grant from the National Library of Medicine.

The Community Medical Television System, the nation's first medical network on the 2500 megaHertzian instructional bandwidth, began operation in Spring of 1967, under the Center's leadership and coordination. It linked initially, with line-of-sight transmitters, Emory University Medical School and Hospital; Grady Memorial Hospital, Emory's teaching hospital; the Georgia Department of Public Health and its Mental Health Institute; the Veterans Administration Hospital and the Audiovisual Center. Programs are transmitted from Grady and the Center and received by others hooked into the network. The System, if successful, will serve as a prototype for others of its kind throughout the nation. Operation of the system became a project of the Georgia Regional Medical Program in 1968 and now includes offices of practicing physicians and 15 institutions.

FACILITIES: The Center has complete in-plant motion picture, filmstrip and television, production and laboratory equipment located in a four-story building designed especially for audiovisual activities. In addition, it acquires, prints and distributes medical and health-related films, makes multiple prints and distributes them throughout the world, operates the National Archives of Medical Motion Pictures and maintains an international central reference file of medical audiovisuals.

DISTRIBUTION: Public Health Service films are available from National Medical Audiovisual Center (Annex), Station K, Atlanta, Georgia

30324, on loan to schools of the health professions, other medical/health institutions and organizations throughout the U.S. and abroad. Films are listed in the National Medical Audiovisual Center Catalog published annually. Information on teaching films is also available from a central reference file.

REFERENCE SOURCES: In addition to the National Medical Audiovisual Center Catalog, two other catalogs are published by the Center: *Film Reference Guide for Medicine and Allied Sciences* and *Sensory Disease Film Guide*. A special catalog of selected films on heart disease, cancer and stroke is available, as are special listings on mental retardation, dentistry, and organ transplants. A master international index is maintained to support special requests for film information not otherwise available.

PRODUCTIONS: Among recent 16mm motion pictures produced at the Center are *The Price of Survival*, produced for the Division of Health Mobilization to encourage advanced disaster planning at the local level for the protection of community health; *Community Action in Aguprieta*, a film documenting a health and sanitation program carried out in a small Mexican border town; *Bone Marrow Aspiration*, demonstrating the technique of taking bone marrow specimens from the sternum and the preparation of smears for staining.

A series of videotapes was begun to teach techniques, principles and procedures of clinical pathology to hospital residents, interns, medical students and to serve as a source of review for practicing physicians and allied personnel. Four videotapes from this series include *Theories of Blood Coagulation*, *Isolation and Identification of Enteric Bacteria*, *Kidney Function Tests*, and *Mechanical Equipment for Cardio-Pulmonary Resuscitation*.

An educational package, for instruction of vocational rehabilitation counselors in rehabilitation of victims of heart disease, cancer and stroke was completed in 1968 and included

motion pictures, a filmstrip, a student manual, and a teacher's guide. Among motion pictures in the package are: *Edward Bailey - Cardiac*; *John Hazen - Cardiac*; and *David Carney - Cardiac*.

More than 100 films were produced by the Center in 1968, many of them with Spanish and French sound tracks as well as English.

Social Security Administration

Baltimore, Maryland 21235

Russell R. Jalburt, *Assistant Commissioner for Public Affairs*

Phone: 944-5000 ext. 2187

Robert T. Fenwick, *Chief, Audio-Visual Branch, Office of Information*

Phone: 944-5000, ext. 5587

ACTIVITIES: The Social Security Administration produces and distributes films on Old Age, Survivors, and Disability Insurance, and on Health Insurance (Medicare). These are public information films designed to explain to the viewer what he needs to know about the social security law and what benefits he might be entitled to. Most films and spots are intended for both television and theatrical use.

FACILITIES: The Administration has a small studio and limited facilities located in the Baltimore Headquarters Building. Some film work is contracted to commercial producers.

DISTRIBUTION: Through 800 District and Branch offices throughout the country, prints may be obtained on a free loan basis. Prints may also be bought.

DEPARTMENT OF INTERIOR

Washington, D.C. 20240

• The Department of Interior produces films which are concerned with the management, conservation and development of natural resources in every section of the Nation. Films are available from the bureau in which they have been produced.

Office of the Secretary

Harmon Kallman, *Office of Information*

Phone: (202) 343-3171

Inquiries concerning the use of Department of Interior films for television should be addressed to this office. A Departmental film catalog is available on request.

The Bureau of Land Management

John A. Mattoon, *Chief, Office of Information*

Phone: (202) 343-3609

• Five films are available from the Bureau's office including the award-winning new film *The Last Frontier*, a 29-minute film about America's last public domain lands, their history and future.

Others available for loan and for TV showings are: *Alaska, Land to Grow On*, 28-minute color film on public lands and resources in Alaska; *Watershed Conservation*, demonstrating water conservation on the public lands; *Rogue River Country*, 28-minute color film about the recreational opportunities and wealth of natural resources found in the Rogue River Valley of southwestern Oregon, and *This Waiting Land*, a 27-minute color film, which contrasts pioneering a century ago with present day multiple use resources management. State BLM offices having libraries are: Portland, Sacramento, Phoenix, Reno, Salt Lake City, Santa Fe, Denver, Cheyenne, Boise, Billings, and Anchorage.

The U. S. Bureau of Mines

Dr. A. Nicholas Vardac, *Officer-in-Charge, Audio-Visual Programs, Motion Picture Development and Production Bureau of Mines, Washington, D.C. 20240*

Phone: REpublic 7-1820, Ext. 3359

ACTIVITIES: The Bureau of Mines has a broad film program dating from about 1920. Motion picture subjects deal with natural resources of states and areas and with mineral commodities including metals, non-metals and petroleum. Recently released films include: *Helium, Aluminum - Metal of Many Faces, Nevada and Its Natural Resources, Steelmaking Today, The Extraordinary World of Zinc, The Lead Matrix, Silver, Wealth of the Wasteland, More Fire Control, First Aid Now* and *Tennessee and Its Natural Resources*.

FACILITIES: All films are made in cooperation with private industrial firms which pay production costs and select commercial film producers. The Bureau maintains no production facilities.

DISTRIBUTION: About 8,500 prints of films are distributed to the public on a free loan basis from the film distribution center of the Bureau of Mines, 4800 Forbes Ave., Pittsburgh, Pa. 15213, and from depositories in 40 states. Annual number of showings is 240,000. Most films are cleared for free TV use. Single or block bookings arranged. Catalogs available.

PRODUCTIONS: Currently in production are films on *Molybdenum, the State of Oregon, the Modern Refractor, the State of Pennsylvania* and *Down to Earth; States of the Union* and *Out of the Earth*.

ACTIVITIES: The Bureau of Reclamation produces one or two pictures a year on water resource development in the seventeen western states — usually "low budget" sound-color films which run 14 or 28 minutes for TV use. Film catalogs are available from the Washington, D.C., office of the Bureau; the Regional offices and the Film Distribution Center in Denver.

FACILITIES: Most of the film work for the Bureau of Reclamation is contracted by the appropriate Regional office with commercial producers. There are seven Regional offices, all in the western states, supervised by the Washington office.

DISTRIBUTION: Distribution of Bureau of Reclamation films is now accomplished through the Film Distribution Center, Bureau of Reclamation, Bldg. 67, Denver Federal Center, Denver, Colorado 80225. On occasion, surplus prints are loaned to educational institutions for their distribution libraries.

PRODUCTIONS: Recent productions include: *Rivers in the Sky*, a picture with unusual cloud effects resulting from time-lapse photograph, to show research in weather modification. *Flaming Gorge*, the story of the construction of a high dam on the Green River in the Rocky Mountains in northern Utah which was selected as the winner in public relations, sales and advertising in an industrial photography competition; *Power for a Nation* in which the Bureau of Reclamation collaborated with other Department agencies to portray the role of the Department in hydropower production. The Bureau of Reclamation is also distributing prints of *New Water for a Thirsty World* which was produced by

the Office of Saline Water of the Department of the Interior.

U. S. Fish & Wildlife Service

Elliot A. Macklow, *Chief, Audio-Visual Services*, Branch of Marketing, Bureau of Commercial Fisheries, Fish & Wildlife Service. Phone: (202) 343-6897

ACTIVITIES: Using commercial contractual motion picture facilities, this organizational unit plans, produces and distributes fishery marketing and educational motion pictures sponsored by both Government and industry. Other audio-visual materials such as fishery television spot announcements and radio spot announcement discs and are also produced and distributed.

FACILITIES: Commercial contractual motion picture facilities.

DISTRIBUTION: Utilizing about 200 Government and private film libraries, 26 fishery motion pictures are distributed free of charge upon request. Provision has been made so that most of the films are cleared for television, although special permission is required before telecasting. Stock footage is not available. A catalog listing the commercial fisheries films distributed and the instructions for obtaining them may be obtained free of charge upon request. A central Audio-Visual Services film library is maintained. Films and information may be obtained by writing Audio Visual Services, Bureau of Commercial Fisheries, 1815 N. Ft. Myer Drive, Room 601, Arlington, Va., 22209. Requests for films to be sent outside the U. S. should be made to the nearest U. S. Embassy or Consulate. Applications are accepted from institutions wishing to serve as non-profit film libraries.

PRODUCTIONS: The following motion pictures are the latest added to the film library system: *Flavor of Maine*, sponsored by the Maine Sardine Council; *Trout USA*, for the U.S. Trout Farmers Association; *Mullet Country*, spon-

sored by the Florida Board of Conservation; *Estuarine Heritage* and *The Biologist and the Boy*, both produced for the five states bordering the Gulf of Mexico, comprising the Gulf States Marine Fisheries Commission.

The U. S. Geological Survey

Frank H. Forrester, *Information Officer*
Phones: (202) 343-4646/4647

• This office maintains and distributes a limited collection of motion picture films dealing with the earth sciences. Of major interest are the award winning films, *The Eruption of Kilauea*, 1959-60 and the earlier film release, *The 1955 Eruption of Kilauea*. These show, at close range, the spectacular eruption of the Kilauea volcano on the island of Hawaii.

Recent film releases include the *Alaskan Earthquake*, 1964 and *The Sea River*. The first of these films documents the destructive effects of the March 27, 1964, Alaskan earthquake both graphically and pictorially in on-the-spot scenes. The *Sea River* film records hydrological investigations carried on in the Amazon River Basin as a joint operation between the Geological Survey and the Brazilian Navy.

Requests for additional information about these and other films should be addressed to the Information Office, U.S. Geological Survey, Washington, D.C. 20242.

The survival of the fittest:

from the center of the coil. We've also added metal strips in the plastic platters. Now only metal touches the film's edges. We further strengthened the cartridge's long wearing capabilities with rollers of new wear-resistant plastics. Result? Virtually the end of film breakage. Our new cartridge does away with center film breakage due to surface dirt. It also prevents any damage from a pronounced "set" in the film from inactivity.

And so our evolution goes. And so it will go on. Because thousands of customers are using our projector. In the field, where it really counts. Because we're constantly in touch with them. Making modifications to their needs. And doing our own extensive tests in the lab as well. And because we're continually refining and improving our projector, our Super 8 projector always is new, refined and bettered.

The simple yet complex process of evolution.

**The survival of the fittest:
MPO Videotronic Super 8**

possibility. So we increased our motor capacity. And redesigned our motor drive system to cope with frequent overloading.

The film itself can occasionally cause problems. And we were out to anticipate those. We altered the film gate and the sound head so they can better withstand the abrasive conditions imposed by the occasional poorly slit and excessively dirty film. But with all our improvements over the years, we—and all the other projector manufacturers—have still been plagued by occasional film breakage...

Now. The most important technological advancement in the history of loop projection.

In the process of working on these film problems, we developed an improved Super 8 film cartridge.

Our latest cartridge has a metal film guide that positions the film as it's drawn

• The Library of Congress has an unrivalled collection of American films dating from the infancy of the motion-picture industry, which it has acquired through the operation of the copyright law and through gifts, and it also has a large body of foreign films turned over to it as a result of wartime seizure. The Library's activities in the motion-picture field include the registration of claims to copyright, the acquisition of films, the cataloging of films and related bibliographical data.

The Library's Copyright Office has registered claims to copyright for motion pictures since 1894, when the first examples of this medium were deposited in the Library in the form of photographic paper prints; since 1912 the copyright law has provided for the registration and deposit of motion pictures as such. Generally, under the provisions of the motion-picture copyright agreement between the Library of Congress and the motion-picture proprietors, the films are returned to the copyright proprietor by the Library after registration, but the Library has the right to claim the deposits for its collections later.

The Copyright Cataloging Division of the Copyright Office prepares a semi-annual *Catalog of Copyright Entries: Motion Pictures and Filmstrips*, which lists all such materials registered for copyright in the United States and which is published by the Library and sold by the Government Printing Office. It has also prepared four cumulative catalogs entitled *Motion Pictures*, which together cover registrations of films for the years 1894-1959 and which are for sale by the Government Printing Office.

In addition, the Library's Descriptive and Subject Cataloging Divisions catalog educational films, using data submitted largely by producers and distributors, and the Library publishes this cataloging information in two useful forms for purchase by other libraries or individuals. One form is the printed catalog card, which any film-user may purchase to establish his own card-catalog for the control of his collection and for the dissemination of film information. The other is a book-catalog reproduced photographically from the printed cards and containing a detailed subject-index, adequately cross-indexed; entitled *Library of Congress Catalog - Motion Pictures and Film-Strips*, this publication is issued quarterly and in annual cumulation, and it also appears as a volume in the quinquennial cumulation of the Library's *National Union Catalog*. Both the printed catalog cards and the book-catalog may be purchased from the Card Division, Library of Congress, Building 159, Navy yard Annex, Washington, D.C. 20541.

The Library's collection of motion pictures comprises about 89,000 reels and is in the custody of the Prints and Photographs Division in the Reference Department. It is primarily an archive in nature, and reference service is provided to assist research activities. The Library does not lend motion pictures, but some films

may be copied under certain conditions; copying requires the signing of a standard agreement concerning the clearance of copyright and the copying of equivalent footage for the Library.

The Professionals.

We work a lot harder... to make our clients' dollar go a lot further. We create films for people like Eastern Air Lines, The State Department, VISTA, The Epilepsy Foundation, MGM, The Cotton Council, and Coca-Cola. We have produced over 130 motion pictures and have won over 40 major international awards from: Brussels, New York, Edinburgh, Chicago, San Francisco, and Atlanta Film Festivals.

We do a lot more: Treatment, Script, Story-board, Animation, Location Photography, Original Music, Editing, and Final Assembly. If you need a motion picture, or would like to discuss the possibilities, then... Let's get together. We may be on location anywhere in the world, but we're not very hard to get in touch with: INTERFILM/CINEMA EAST

 INTERFILM/CINEMA EAST

Introducing...

A complete and unique post production and film laboratory service. Now, for the first time, all your production requirements can be handled under one roof, on one floor (21,000 sq. ft.), supervised by one group of technical specialists and one customer service department.

THE COLOR CENTER is an in-line operation from start to finish, fully integrated technically with computerized and automated equipment. No longer will you have to deal with many different companies, coordinate their efforts and work with many people.

THE COLOR CENTER can service you with:

OPTICAL EFFECTS AND ANIMATION SERVICES —

A complete optical house is part of **THE COLOR CENTER**. The latest Oxberry optical benches, precision printers, animation stands and a professional staff of technicians are ready to provide you with quality optical and special effect negatives.

SLIDE AND FILMSTRIP LABORATORY:

Slide and filmstrip photography, answer prints and release printing are a specialty at **THE COLOR CENTER**. Complete facilities for shooting filmstrip negatives, 5254 or 6006, over-night answer print service and quantity filmstrip release printing including automatic slide mounting, make **THE COLOR CENTER** to-day's most modern and advanced filmstrip laboratory.

MOTION PICTURE LABORATORY SERVICES —

THE COLOR CENTER has all the technical ability to service your film needs in both 35mm and 16mm motion picture release prints. Negative matching, A & B printing, Hazeltine color timing of answer prints, negative-positive and reversal printing, high speed loop panel printers all assure that your films will be reproduced with reliability and on time.

Call to-day for your tour — Ask for Bernie Barnett.

The COLOR CENTER Inc.

A subsidiary of Electrographic Corp., 410 East 62nd Street, New York, N.Y. 10021, (212) 838-3900

DISTRIBUTION: Public information film clips for public service and documentary films are distributed through U.S. Postmasters in all regions.

NATIONAL AERONAUTICS AND SPACE ADMINISTRATION

Office of Public Affairs —
Audio-Visual Program
Washington, D.C. 20546

Walter E. Whitaker, *Audio-Visual Officer*
Room 811, Reporters Building
Phone: 962-2757

James B. Etheredge, *Chief, Motion Picture
Production*, Room 811, Reporters Building
Phone: 962-2757

Warren Phipps, *Chief, Distribution and
Depository*, Room 811, Reporters Building
Phone: 962-2858

Clayton L. Edwards, *Manager, TV Produc-
tions/Services*, Room 6050, Federal Office
Building 6
Phone: 962-2795

ACTIVITIES: These branches supervise the agency-wide production and distribution of films,

TV and radio programs, and other audio-visual materials on space and aeronautics; and coordinate requests for NASA assistance from media producers and the public.

FACILITIES: Production requirements are fulfilled primarily by contractors under a "call contract" or basic ordering agreement system, with some in-house production.

DISTRIBUTION: NASA films, tapes, and production aids are available on free loan; stock footage and transparencies may be purchased from agency contractor laboratories. All requests for assistance in film productions should be sent to Mr. Whitaker, requests for TV production assistance to Mr. Edwards. Requests to borrow NASA films or other AV materials should be sent to Mr. Phipps.

PRODUCTIONS: Those released in 1968 include: *America in Space; The First Decade; Apollo Mission Highlights; Debrief; Apollo 8; Nuclear Propulsion in Space; Radio Astronomy Explorer and The Flight of Apollo 7.*

DEPARTMENT OF TRANSPORTATION FEDERAL AVIATION ADMINISTRATION

800 Independence Ave., S.W., Room 412B
Washington, D.C. 20590

John A. Nugent, *Chief, Motion Picture
and TV Branch, HQ-450*

Martin Konigsmacher, *Senior Production
Supervisor*

Jerry Ward, *Producer-Director*
George Mathieu, *Project Coordinator*

ACTIVITIES: The Motion Picture and TV Branch produces motion pictures and television programs designed to meet the needs of the Services and Offices which comprise the Federal Aviation Administration.

FACILITIES: The FAA uses both in-service capabilities and commercial contracts with industry in supplying its motion picture services.

FILM DISTRIBUTION: Distribution of FAA films is handled through the Aeronautical Center Film Library, AC-43.1, P.O. Box 1082, Oklahoma City, Oklahoma.

MOTION PICTURE PRODUCTION: Productions vary from highly technical training films to those designed for the general public. Numerous awards have been won in both national and international film festivals.

Federal Highway Administration

William F. Hall, *Chief, Photographic Section*
Phone: WOrth 7-3013

ACTIVITIES: This Bureau produces films on subjects pertinent to highway development, safety, and related subjects, sometimes in cooperation with other government agencies, state and local highway departments, and other interested organizations.

FACILITIES: In-house capacity.

DISTRIBUTION: These films are available on a

loan basis, with borrower paying return transportation, from Chief, Photographic Section, Federal Highway Administration, Washington, D.C. 20591. Films may be purchased by responsible organizations, by inquiry to same address.

United States Coast Guard

Washington, D.C. 20591
Phone: (202) WOrth 4-5303

H. E. Whitwer, *Chief, Motion Picture & TV Branch, Public Information Division*

ACTIVITIES: The U. S. Coast Guard produces information and training, as well as recruiting films. The majority are in 16mm color-sound with running time of 3 to 28 minutes. Coast Guard films have consistently been selected by the United States government for entry in foreign film festivals, and have won a number of awards.

FACILITIES: In-house capability. The Coast Guard has limited in-house writing, directing, shooting and editorial capability. Additional production services as well as all processing and printing are contracted for as required.

DISTRIBUTION: A catalog of U.S. Coast Guard films is distributed by film libraries in Washington, D. C. and at District offices in Boston, New York, Portsmouth, Miami, New Orleans, St. Louis, Long Beach, San Francisco, Seattle, Juneau and Honolulu.

PRODUCTIONS: Current productions include training films, public information films and TV spots.

U. S. TREASURY DEPARTMENT

Washington, D.C. 20025

• A recently-revised version of a 28-minute film, *The Treasury Story* reviews the activities of this Department. A five-minute summary version is also available for use in continuous automatic projectors.

Internal Revenue Service

Phillip S. Horne, *Training Production Coordinator*, Phone: 557-2943
Charles M. Lammond, *Visual Information Officer, Office of Public Information*, Phone: WOrth 4-4037

ACTIVITIES: Films for public and internal use are prepared by the Internal Revenue Service. Motion pictures for public viewing are produced by the Public Information Division, those for employee training or orientation by the Training Division. The Training Division also produces filmstrips, slide tape programs and videotapes for internal use. The Information Division also supervises production of television spot announcements for use during each tax filing period. It has also recently begun the production of films in Spanish, partly to extend its taxpayer information in the U.S. and partly as an advisory aid to Latin American countries concerned with Federal government cooperative programs.

FACILITIES: The public information films of Internal Revenue Service are produced professionally, usually utilizing the agency's own office facilities and personnel for background scenes but hiring professional talent for action bits, narration, etc. Laboratory production facilities are contracted to complete the film after the first rough cut. Training films are sometimes produced with Internal Revenue Service personnel and sometimes with professional talent. Production and laboratory facilities for some training programs are also contracted.

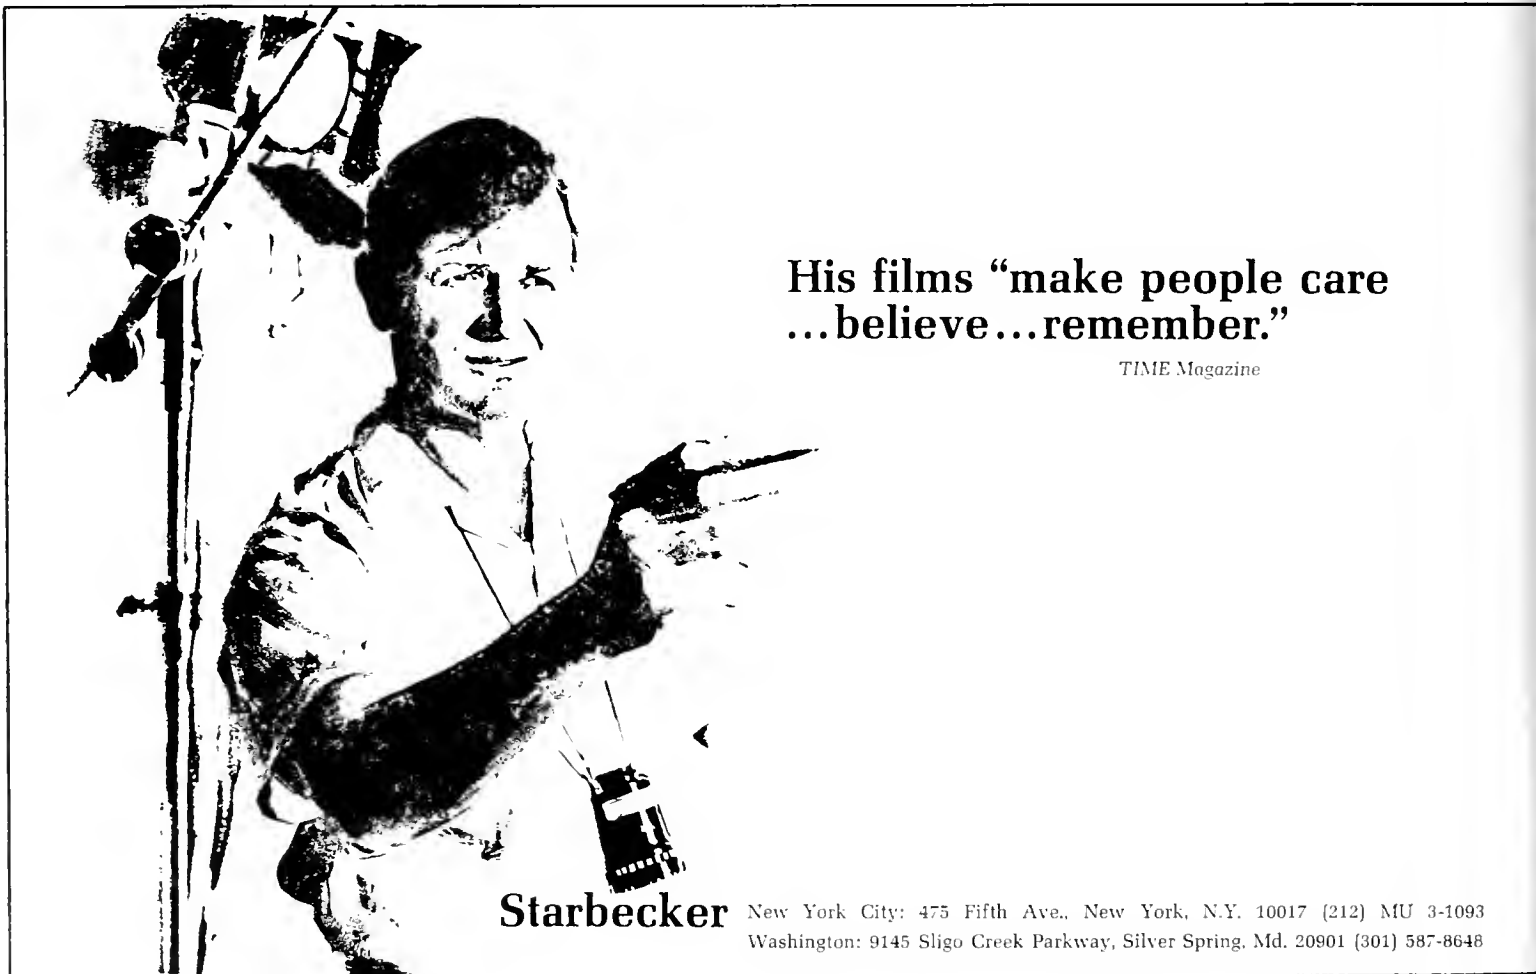

DISTRIBUTION: The 58 district offices, and several of the larger local offices, distribute Internal Revenue Service film productions. All clearances and releases have been obtained for general showing of Internal Revenue Service films. **PRODUCTIONS:** The Public Information Division has prepared a new ½-hour film production featuring Dennis James to inform taxpayers about 1969 developments in filing their federal income tax returns. In addition to this 16mm color production, it also has released a 20-minute, 16mm color combination historical and informational film, *Mission for Millions*, which will give taxpayer viewers an insight into actual operations of Internal Revenue Service offices of all types. A 10-minute film, *Right on the Button*, describes the ADP — automatic data processing — of tax returns, from the standpoint of taxpayer interest.

U. S. Savings Bond Division

Jacob Mogelev, *Promotion Manager, U.S. Savings Bonds*
Phone: WOrth 4-570

• A variety of films telling the story of U.S. Savings Bonds is available suitable for community audiences of all kinds. Many are inspirational, some humorous, some informational. They were made available to the Treasury through the generosity of patriotic volunteers. Their showings take place under volunteer auspices as well. *The Land We Love*, 16mm, sound-color, 23 min., cleared for television. *24 Hours in Tyrantland*, 16mm, sound-black and white, 30 min., television rights by special arrangement only. *Grampa's Inheritance*, 16mm, sound, black and white, 16 min., television rights by special arrangement only. *Star Spangled Salesman*, 16mm, sound, color, 20 min., not for television. *Riley — Savings Bonds Salesman*, 16mm, sound, black and white, 19½

RELIABILITY
COMFORT
MOBILITY

So light...
You'll never
know it's there!

©U.S. Patent
#3274476

* Because

CINE 60 OFFERS YOU THE MOST ADVANCED CONCEPT IN BATTERY DESIGN

- Rechargeable Nickel Cadmium Batteries built into a handsome easy to wear belt.
- Completely sealed battery cells, maintenance free.
- Built-in charger and coiled charging cable.
- Automatic overload switch for protection against short circuit. This switch functions as an automatic fuse, which will reset automatically and will never have to be replaced.

Belt shown above is:
UNIVERSAL POWER BELT
with 8.4V-12V-16.8 Volt Output

- No awkward battery case to get in your way.
- No bulky weight tugging at your shoulder.
- Designed for comfort and mobility.
- There is a belt for each professional camera ranging in voltage from 6 to 30 volts.
- We also make a powerbelt, 30 volt, for the Sylvania professional sungun.

SERVICES and FACILITIES: USIA produces, acquires and distributes abroad motion picture and television films for the overseas information and cultural program of the U.S. Government. The USIA audience numbers over 260 million viewers in 92 countries plus some 750 million persons who annually see USIA films in theaters and private showings. Output ranges the full gamut of both media — from brief newsclips to feature length motion pictures and hour-long television dramas. These products are released in as many as 58 foreign languages.

PRODUCTIONS: Examples of the agency's motion picture and television output include: *The Eighth District*, *Hands of A Stranger* and *The Other War*, documentaries on Viet Nam; *Cleveland Makes a Choice*, a documentary on the election of Mayor Stokes; *Media Hora* and *Emilio Espina*, half hour and one hour television series being shown in Latin America; *Cowboy*, one of the "Young America" documentaries which was nominated for an Academy Award last year; and *John F. Kennedy: Years of Lightning, Day of Drums*, the 90-minute color feature, continues in heavy demand in its fourth year of release.

THE PEACE CORPS

Washington, D.C. 20525

Kenneth Skirvin, *Special Assistant, Division of Administrative Services*

Phone: (202) 382-2482

DISTRIBUTION: Two films, *A Mission of Discovery* (1964) and *A Choice I Made* (1965) are distributed by United World Free Films through 30 outlets in continental U.S., Alaska and Hawaii.

Information regarding other films produced for the Peace Corps may be obtained by writing directly to the Peace Corps.

THE CANADIAN FILM INSTITUTE

NATIONAL OFFICE: 1762 Carling Avenue, Ottawa 13, Ontario, Canada.

**ASSOCIATION OF
MOTION PICTURE PRODUCERS
AND LABORATORIES OF CANADA**

OFFICE (Of the President): 12 Shuter Street, Toronto 1, Ontario; (Of the Executive Secretary): Suite 512, 55 York Street, Toronto 1, Ontario, Canada.

OFFICERS: Heinz A. K. Drege (Drege Audio Ltd.), *President*; Robert C. Crone (Film House Limited), *Vice President*; Roger J. Beaudry (Pathe-Humphries of Canada Lt.), *Honorary President*; Frank A. Young, *Executive Secretary*.

DIRECTORS: Roger J. Beaudry (Pathe-Humphries of Canada Ltd.), Murray Briskin (Associated Screen Industries Ltd.), Al Dancy (TDF Film Productions Limited), Tom F. Glynn (Crawley Films Ltd.), E. Wally Hamilton (Trans-Canada Films Ltd.), Gunter Henning (Western Films Limited), Henry Michaud (Omega Productions, Inc.), Maxine Samuels (ASP Productions Ltd.), Pat Clever (Comprehensive Distributors Ltd.).

MEMBERSHIP: Canadian firms, proprietorships, partnerships, corporations and agencies engaged in motion picture production or laboratory work are eligible for Active Membership (voting). Persons, firms or organizations acceptable to the membership and interested in the furtherance of the motion picture industry in Canada are eligible for Associate Membership (non-voting). Present membership: 59 Active Members; 15 Associate Members; Total 74.

PURPOSE: To promote the common interest of those engaged in the motion picture production and laboratory industries in Canada by maintaining the highest possible standards in the production of motion pictures for industrial, commercial, theatrical, or television release; to represent the industry in its relations with government, other associations and the public at large; to encourage government agencies to have their films produced by private producers.

ACTIVITIES: 1. To continue to promote the quality and use of Canadian private film production and laboratory industries. 2. To encourage all governments and government agencies to let more and more film production via tender to private producers, and to produce fewer films themselves. 3. To co-operate with the Federal Government in the operation of the Canadian Film Development Corporation. 4. To take an increasingly important part in the staging of the impressive annual Canadian Film Awards competition. 5. To provide constant liaison with all levels of government in matters of taxation.

**AUDIO VISUAL SERVICE COMMITTEE
OF THE ASSOCIATION OF NATIONAL
ADVERTISERS, INC.**

OFFICE: 155 E. 44th St. New York, N.Y. 10017.

OFFICERS: Peter W. Allport, *president*; William D. Kistler, *Vice President*; Anthon C. Lunt, *Administrative Secretary, Audio-Visual Service Committee*.

MEMBERSHIP: *Chairman*: Willis H. Prair Jr. (American Telephone & Telegraph Co.); *Committee Members*: R. W. Bonta (General Electric Co.); Walter A. Burton (Honeywell Inc.); Robert J. Cohen (Bell & Howell Co.); William J. Connelly (Union Carbide Corp.); James G. Damon, Jr. (IBM World Trade Corp.); John Flory (Eastman Kodak Co.); John K. Ford (General Motors Corp.); Gerry G. Germain (Metropolitan Life Insurance Co.); John P. Grember (United Air Lines); F. Barry Koss (Worthington Corp.); William J. McGlone (3M Co.); Frank Rollins (E. F. Squibb & Sons); Johna Pepper (Ford Motor Co.); B. B. Randolph (Alcoa).

PURPOSE: The committee initiates and executes projects which will provide the 130 "Audio-Visual Interest Group" members of the ANA with cost, technical, distribution and other information about business films and other audio-visual materials and techniques.

If you're in a bind for lab service, Reela can bail you out.

When deadlines loom large, and you keep running into one delay after another, call Reela. Nobody offers faster service. And nobody will give you better quality work.

Reela's speed and high quality come about because of three things:

1. Competent, dedicated people.
2. Jet transportation, and an outfit that knows how to exploit it.
3. Sophisticated new equipment.

How many release prints do you need — 20? 100? Reela can make them.

Perfect. Sharp. Color-balanced. Back in your hands (or drop-shipped if you want) before you know it. Why settle for less than the best? Call Reela now.

REELA OFFERS:

- Complete editorial services
- complete producer's services — animation — titling — sound
- complete 8, 16, and 35mm laboratory services, including black and white or color dailies for Florida filming
- Super 8 printing and cartridgeing.

BRITISH INDUSTRIAL & SCIENTIFIC FILM ASSOCIATION

OFFICE: 193-197 Regent St., London W1, England. Phone: 01-734-4536.

OFFICERS: Sir Peter Runge, *President*; The Earl of Drogheda, The Earl of Halsbury, *Vice Presidents*; Sir Arthur Elton, *Chairman*; Laurence Mitchell, *Vice-Chairman*; Andrew Gibson-Watt, *Honorary Treasurer*; Tony Durant, *Director*.

PURPOSE: 1. To promote the use of film by industry and science in all fields of national development. 2. To encourage the exchange of information on the value, use and application of film in the fields of industry, science and, for this purpose, to employ lecturers, to arrange discussions, meetings and conferences and to publish or distribute books, journals, pamphlets and articles. 3. To support and carry out research, instruction and experiments in matters connected with use of film in the fields of industry and science, and to collect, collate and disseminate information, data and statistics relating thereto. 4. To promote festivals and competitions, alone or with others, at which films can be screened, film equipment exhibited, papers

read and discussed, and discussions organized on or incidental to the aims of the Association, to make awards and give prizes. 5. To take executive responsibility for participation in appropriate international film festivals, and to organize the selection of films to be submitted. 6. To cooperate with the Council of European Industrial Federations, the International Scientific Film Association, and other appropriate national and international organizations. 7. To sponsor or produce or in any other way to secure the production of films related to industry and science, particularly those likely (a) to generate an awareness at home and overseas of British achievement in industry and science and (b) to encourage exports. 8. To advise H.M. Government on possibilities of the production, distribution and use of film in industry and science to meet national needs at home and national purposes overseas. 9. To compile and publish the British National Film Catalogue as a record of all British and foreign films available in Great Britain; and to undertake, alone or with others, the appraisals of films, and to publish appraisals.

CHICAGO FILM COUNCIL, INC.

OFFICE: 309 W. Jackson Blvd., Suite 100, Chicago, Ill. 60606. Phone: (312) 939-6056.

OFFICERS: Jerry Curto, Jr. (Santa Fe Railway), *President*; Jack Lusk (Modern Talking Pictures), *Vice President*; Gordon Hempel (Sterling Movies, Inc.), *Secretary*; Robert Doyle (U.S. Steel Corporation), *Treasurer*; Bob Konikow (Advertising and Sales Promotion), *Program Director*.

DIRECTORS: Darryl Miller (American Dental Association); William Kruse (Audio-Visual Media, Inc.); John Colburn (John Colburn Associates); Bernard Mack (Filmack Studios); Donald Buck (Coronet Films); Robert Seipp (WTTW-TV); Dan Bjick (Illinois Bell Telephone Company); Ruth Ratny (Ruth Ratny Enterprises); John Thompson (Colburn Laboratories); Frank Bronwell (Chicago Cinema Club).

PURPOSE: The purpose of the Council is to promote, improve, and extend the use of films and other audio visual materials for commercial, informational, cultural, and socially constructive purposes and to seek progressive methods of film production, distribution, and effective use of films.

Our story in a nutshell.

All the equipment you'll ever need is at Camera Mart.

Making movies is tough enough. Don't add to the problems by dealing with more than one equipment supplier. Camera Mart has everything any professional movie-maker could ask for.

We also have the technical know-how to help you on special projects. And faster, more efficient service. In short, getting the equipment you want — when and where you want it — will never again be a tough nut to crack.

\$19.95

SPINDLER & SAUPPE INC.
1329 Grand Central Avenue,
Glendale, California 91201

This is the Beaulieu R16B "Automatic."

Can you find the battery?

Our cameraman isn't wearing it. He doesn't have to. Because Beaulieu's rechargeable nickel cadmium battery is built right into the camera handgrip. Powerful? The 1000 mA model will shoot eight 200 ft. magazine loads on a single charge. But just as important, you can replace the battery with a fully charged spare in seconds. With the Beaulieu 16mm, there's no need for batteries strapped around your waist or swinging from your shoulder.

Take another look at the R16B "Automatic". That's a 200 ft. daylight-load magazine on top, a sync pulse generator plugged into the side, and an Angenieux 12-120mm zoom lens out front. Now how much would you say the entire outfit weighs? Including the battery.

If you guessed as little as 12 pounds, you guessed too much. It's 10½ pounds! And the price is just a little over \$2,650!

You don't have to give up critically important features, either.

Like rock steady pictures. Like a mirrored shutter, for reflex viewing with no prism between the lens and the film plane.

You also get the finest automatic exposure control system ever built. A Gossen light meter measures the light intensity coming directly through the lens. And it electronically controls a miniaturized motor that instantly rotates the Angenieux's diaphragm ring to the correct aperture setting. No footage is lost due to rapidly changing light conditions.

Sync sound is no problem. Your Beaulieu R16B "Automatic" teams up naturally with professional recorders, such as Nagra and Uher, for sync sound filming.

That's pretty good for a little over \$2,650. Particularly since you couldn't get this combination in any other camera even if you spent twice as much.

Would you want to Pyramid your sales— with salesmen who call on prospects and customers with ideas that create need and desire for your products and services?

And would you prefer salesmen—who by selling creatively—bring prestige to your company, your product and to themselves as salesmen?

If so—won't you want to show them

“CREATIVE SELLING”

... the fourteen meeting audio-visual salesmanpower development program on the attitudes and techniques of helping people buy benefits?

Creative Salesmen sell 16 times more

Records show that Creative Salesmen—the elite of their profession—average 16 times more business than the average of ordinary salesmen. With men such as these, wouldn't you be taking a giant step toward solid company growth with increased profit?

That's what the program “Creative Selling” is designed to do for you.

Results you might want

If your salesmen had as much knowledge of people—as they have of your product—wouldn't they be better salesmen? Wouldn't the result be that your customers and prospects would think of them as warm, friendly, responsive and unselfish men—and the kind they're always glad to see and do business with?

Are these the kind of men you'd want as a result of your salesmanpower development program? If they are—won't you want to know more about a program that shows men...

- ... a method of selling that creates more appointments with more and better qualified prospects?
- ... a method of selling that creates need and causes prospects to want your offering?
- ... a method of selling that creates trust and confidence and minimizes sales resistance?
- ... a method of selling that creates more closes, easier closes and minimizes lost sales?
- ... a method of selling that creates more new business, more repeat business and more referral business?

These are results you might expect from showing “Creative Selling” to your men.

The Multiplier

Would it help you if you could develop salesmen in your branch offices as effectively as in the home office?

The “Creative Selling” program is designed to simultaneously multiply your sales development efforts wherever you wish—because it is programmed in detail, permitting anyone to administer the program professionally and successfully. Furthermore it allows salesmen to self-administer it, use it for home study and for periodic reviews. Wouldn't this “instant learning” throughout your company, making all salesmen equally effective at the same time, accelerate your sales growth significantly?

Complete with— Sound Color Filmstrips, Programmed Leader's Manual, Salesmen's Manuals, Workshops, Diplomas, Quizzes, Evaluation Reports, Graduation Hats and Pins.

What about your Distributors and Dealers?

If you could provide this same knowledge to your Distributor's and Dealer's sales forces— would it help to develop and solidify better customer relations? Might it not be good business, also? With “Creative Selling” you can do both with a minimum investment—and be gratefully rewarded with increased business in return.

Hard Sell or Soft Sell?

Some believe in the hard sell—and some in the soft sell. However, wouldn't a method of selling that all prospects and customers prefer, create more demand for your products and services? If you believe this is so—you'll want the method of selling we call “Creative Selling,” the method prospects and customers prefer because it helps them buy benefits—which is what they want.

An Original Concept

Would your men react responsively to a fresh and original concept of selling which is uncomplicated, easy to understand, absorb and retain? And would they enjoy having this concept brought to them in a manner they prefer— by audio-visual methods?

If your answer is “yes”—you'll want to know more about “Creative Selling”— which is not only original in concept—but employs methods of learning by which men learn best—and enjoy the most.

You be the Judge

You may want different things for your men—and have different objectives in mind. But should this advertisement indicate some objectives you do want—wouldn't you wish to know all about this program and our offer for you to see it and judge it for yourself before you buy?

If this is what you want—mail the coupon below!

BETTER SELLING BUREAU

Dept. X49

1150 West Olive Ave., Burbank, California 91506

Please send complete information regarding “Creative Selling” the salesmanpower development program and your preview offer which permits me to judge the program before buying.

Association-Industrial Films, 135 Peter Street, Toronto, Ontario. Herb Lewis, *Vice President & Manager.*

BACKGROUND: Founded in 1911 (as "The YMCA Motion Picture Bureau," a division of the International Committee of the YMCA's), Association Films was the first sponsored film distributor in America. In 1949, the company was incorporated as an independent distribution service.

SERVICES: Promotion and Publicity: Promotes sponsored films through catalogs, special supplements (directed to teachers and program chairmen), advertising in educational and adult journals, individual film brochures, exhibits at conventions, publicity services. **Print Inspection and Maintenance:** prints are electronically cleaned and inspected after each use; repairs are made as needed and replacement prints ordered on sponsor's authority; scratched prints are given Perma-New treatment, as authorized; during the first 36 months of print life Association Films shares in replacement costs due to damages. **Monthly Reports:** sponsors receive detailed performance reports (data processed) which give audience size and composition; film-user evaluations and comments; course of study where film was used; bookings and showings (current, year-to-date, and cumulative); summary of coverage by states; and other data about performance and audiences. **Programing Services:** confirmation and advance booking notices are sent to users and sponsors on a daily

basis; bookers assist organizations in arranging programs and special distribution concepts (Movie-A-Week, on campus, Travelcinema Films for Freedom, etc.) **Library Service Plan:** a professional "physical handling" service for sponsored film libraries that provides all regular services except promotion, as desired) and includes Sponsor Imprinted forms.

ASSOCIATION TELEFILMS: This division is responsible for the distribution of sponsored films to commercial and educational TV stations. It maintains daily contact with TV programmers, creates sponsored-film series and special concepts, prepares TV promotion kits, publicizes sponsored films in "TV Guide" and local newspapers and distributes newsclips and scripts to TV news departments. Current AF-TV series include: *Kyle Rote's World*, *Discovering America*, *Films for Freedom*, *Your Neighbor - The World*, *Theatre 30*, *Achievement*, *World in Focus* and *This Aerospace Age*, all comprised of sponsored films.

THEATRICAL DISTRIBUTION: Places sponsored films in motion picture theatres. Monthly reports, comment cards and advance booking notices are provided; promotion is sent to theatres; publicity stories are sent to theatrical trade magazines.

ASSOCIATION INSTRUCTIONAL MATERIALS: This division of Association Films handles the sales, long-term leasing and rental of educational, training and special purpose films and filmstrips. Acquisitions include sales, rental rights to more than 150 episodes from the award-winning series, *The Twentieth Century*; *Fair Adventure*, a lecture series on Shakespeare featuring Dr. Frank Baxter, *CBS Reports*; and *The Ryan Athletic Instructional Series*, sports training films produced by Dr. Frank Ryan offered to schools through local bank sponsorship or by direct purchase.

ASSOCIATION MATERIALS MAILING SERVICE: a service for mailing, storage and servicing of consumer information and educational materials; processes shipping of booklets, catalogs, premiums and giveaways; records and tapes; fulfillment specialties. MMS has facilities for weighing and metering packaging, labeling, inventory control and delivery.

CAROUSEL FILMS, INC.

1501 Broadway—Suite 1503, New York, N.Y. 10036

Phone: (212) BR 9-6734

Jack Strand, *Director Promotion-Sales*

WINCE we love ya

In six months "Second Effort" has become the biggest selling sales film in history

More than 5,000 U. S. Corporations have ordered "Second Effort". It's estimated that more than three million salesmen throughout the U. S. have seen the film, and have been motivated to put "Second Effort" into their sales.

Dartnell Corporation, who chose TAKE TEN, INCORPORATED to write and produce "Second Effort", is happy about the whole thing. So is TAKE TEN, because many companies since then have asked TAKE TEN to communicate their message in the same exciting fashion.

As one sales executive told us, "If you can handle Vince Lombardi, you can handle our problems too."

TAKE TEN INCORPORATED has been known for the past eight years as a leading producer of sales meetings, industrial shows, slide films and radio-TV commercials. Now we are recognized as the creative company that produces exciting modern motion pictures.

Last year our film for R. R. Donnelley & Sons "River of Knowledge" was one of the top award winners in its class.

"Second Effort" is in a class by itself.

We are currently producing "The Professional" starring Van Johnson and Forrest Tucker. Look out, Vince. This new picture is going to "run to daylight" too.

If you're looking for motion pictures that will produce exceptional results, you're looking for TAKE TEN.

**Write or call: Roland G. Behny, Sales Manager, Take Ten, Incorporated, 211 East Chicago Avenue, Chicago, Illinois 60611
Phone: 944-0455.**

"Yes, we have a film coming up and we would like to talk to you about it."

The Rivals.

That's an IBM 360-20. It is one of the tools we work with at Sterling. To keep up-to-date on print inventories and use-flow of the films we distribute. It helps control booking schedules. Makes sure clients get the reports they need to assess their entire film program.

He is a Sterling salesman. Creative. Hard working. Thoughtful. And he does what no computer could ever do. He helps to develop new and creative solutions for our clients' film distribution problems. The kind of programs that are typified in Sterling's Selective Audience Distribution. Professional Audience Distribution. Theatrical series like Cavalcade. Television series formats. And more.

Why then do we look upon our computer as a sort of rival? A matter of temperament, mainly. It doesn't have an ounce of business instinct. Doesn't really care about your film at all (a thing we regret deeply).

But the man does care. So do all the people who work together to feed the machine the information it needs to do a proper mechanical job.

Only at Sterling Movies. Where people compete with equipment to do a better job for you

distribution...

continued

SERVICES AND OPERATIONS: Distribution of sponsored business films through theatrical, non-theatrical and television outlets is handled from the New York office and the various distributors throughout the United States and Europe. Emphasis is put upon reaching exactly the audience the sponsor wishes to reach no matter how specific or how general that audience may be; and this individual approach is accomplished through separate promotional campaigns, audience selection, publicity and physical handling done on a separate basis for each film. A general catalogue is not published since each title receives an exclusive handling, thus assuring the sponsor of more complete identification and a closer tie-in with his film. Prints are all hand-inspected, sound-read, cleaned and repaired and a complete record maintained on condition of each print. An individual print breakdown with classification is always available and print lifetime guarantee is a part of the service. Monthly exhibition reports sent with full information of each showing. Special questionnaires and personal attendance at screenings provide additional information and can be keyed to supplement companies' other public relations efforts.

FOREIGN DISTRIBUTION: In addition to full coverage throughout the United States and Canada, Rothacker, Inc., offers international distribution service for Europe and the Orient. The main basis of operation is from Germany with other distributors located in England, France, Scandinavia, the Benelux countries, Italy and Switzerland. The foreign distribution is handled in basically the same manner as the domestic with special emphasis on audience selectivity and a high standard of the circulation of each film title. As this type of activity continues to grow throughout Europe, the number of outlets in specialized categories continues to rise.

SOUND SERVICES LIMITED

BACKGROUND: United World Films was organized in 1946. It is part of the Music Corporation of America, which includes Universal Pictures, Universal City Studios, Inc., Decca Records, Inc., and MCA-TV, Inc. In 1946 United World Films purchased the Bell & Howell Film-O-Sound library which was the largest film library operating in the United States. In 1946 United also purchased outright Castle Films, the largest producer and distributor of 8mm and 16mm sound and silent motion pictures.

SERVICES: Since its organization, United World Films has distributed sponsored films for industry. Distribution is conducted for non

Ask the man from United World.

United World Films Distribution Services

United World Films Distribution Services

United World Films Distribution Services

Who Says it pays to talk to the man from United World? You Do.

We've made lots of new friends since these ads first appeared a year ago. Including some people who are still perfectly happy with their present film distribution service. They simply wanted to see if we could do even better for them, and where we couldn't, we said so. After all, we're not the only good house around. Many of the people who responded to our ads are now on our client list. Which is nice for us, and nice for them too, since they're now getting a lot of the extra benefits our custom film distribution approach offers. How about you? If we can beat your present set-up, you're ahead. And if we can't, you'll have once-and-for-all proof that you're already getting all there is to get. Either way, you can't lose when you call the man from United World.

United World Films Distribution Services

distributors...

continued

theatrical, television and theatrical audiences through 43 distribution offices located throughout the United States. United also produces and distributes classroom teaching films to the nation's schools. It makes available on 16mm film all of its own company (Universal) feature theatrical titles along with selected features from Paramount and J. Arthur Rank. Demand for its films comes from clubs, business organizations, colleges, universities, high schools, women's organizations, agricultural groups, etc. These audiences are constantly increasing and United uses this source of fresh new audience contacts for distributing their clients' sponsored films. In the distribution of their clients' 35mm sponsored films, United utilizes the theatrical knowledge, experience and contacts of Universal Pictures, its parent company. By reason of its affinity with MCA, United has the added opportunity to be in constant contact with the program departments of television stations throughout the country. These contacts are used by United in arranging showings for its clients' films.

PROMOTION AND PUBLICITY: United not only produces individual advertising and brochures for each of their clients' pictures, but also has available the extra advertising exposure via listings in other film catalogs produced by the company and distributed to 16mm audiences. United maintains booths and exhibits at the important convention and audio-visual demonstration centers throughout the world.

PRINT SERVICES AND MAINTENANCE: Because it is part of a professional motion picture distribution organization, United maintains the highest standard of inspection. Prints are inspected and

cleaned utilizing the latest electronic equipment. Scratched prints are repaired under a special film coating process. United also shares in the cost of replacing any prints damaged during the early years of distribution.

FILM USERS EVALUATION REPORTS: Certified attendance report forms are supplied to the client on every showing.

MONTHLY REPORTS: The sponsor receives detailed performance reports which supply audience information by type and size. A detailed recapitulation of the cumulative total audience is supplied each month together with information on number of showings, bookings and the like.

TELEVISION DEPARTMENT: This department specializes in the distribution of client sponsored films to commercial and educational TV stations utilizing TV station contacts of MCA.

THEATRICAL FILM DEPARTMENT: Through this department, arrangements are made for quality theatrical distribution dates utilizing the experience and theater contacts of the parent firm, Universal Pictures. The latter company has had over 50 years experience in theatrical distribution and was the first organized motion picture company in the industry. United also makes arrangements for its sponsored clients through its film editing staff to produce 35mm prints from existing 16mm prints via a special process. These 35mm prints are thereafter exhibited in the nation's theaters. Professional advertising is employed by United in the exploitation of its clients' films in the theatrical distribution.

NON-THEATRICAL DIVISION: Clubs, organizations, colleges, universities, men's and women's groups, high schools, agricultural groups, etc.

are but some of the audiences supplied to their clients by this division of United. Film showing are arranged, advance booking notices supplied monthly reports and recapitulations utilizing automatic business machines.

SPONSOR-GENERATED DISTRIBUTION: Where client wishes to solicit and obtain bookings himself, United provides the physical handling, inspection, storage and distribution of such film utilizing its professional experience and facilities. Additional services include "custom" promotion and national research can also be obtained under this type distribution.

"CUSTOM" SERVICES: United produces a "custom" service which includes promotional kit supplied (under a special contract service with its client) by United to each film audience. This gives the sponsored client the added public relations effect surrounding each local community film distribution. It is accomplished by United's publicity division and advertising staff which prepares special news releases, film guides, advertising mats and special posters for use by local film exhibiting audience.

NATIONAL RESEARCH FACILITIES: United has engaged a national research organization on permanent basis for the purpose of conducting a detailed research on questions of importance and interest to its clients. Such things as preferred length of films, content and the like is obtained from audiences throughout the country.

Widely Imitated — But Never Excelled!

During recent decades, these Production Review listings have been widely imitated, from "midget" handouts to bound volumes. But none of these sources provide the facts-in-depth of specializing producers which have made these annual listing pages the best in the industry.

ACTRON

Complete Video Services

ACTRON offers every non-broadcast video service or facility that you need—under one roof.

It's the country's *only* one-stop, full service for production, post-production, equipment sales and rentals, consultation and related services.

No matter what the job, ACTRON can do it. Just look at these capabilities.

Production: 3 studio configurations, top quality cameras, lenses, recorders, telecine chain, front projection system, special effects generators, experienced crews. Full location shooting capability.

Post-Production: Editing any non-2" tape, special effects, viewing facilities on-site. Location playbacks anywhere. Complete kine-scope facilities. Quadruplex and helical-scan duplicates. Dubbing of programs and commercials off-the-air.

Services: Full technical and production consultation on any non-broadcast job. Rental of a wide range of equipment for production in black and white or color. Sale of a full range of video equipment. Service contracts for this equipment. Specialized engineering services to construct or adapt systems

and equipment for special jobs. Tape sales, library and forwarding service.

A member of Reeves Broadcasting's Video Division, ACTRON is backed by the resources of the world's largest independent video services facility... ACTRON offers the same quality that makes the name Reeves synonymous with excellence in broadcast television.

Give a call today. Let ACTRON demonstrate how its one-stop, full service concept will open up your production horizons and end your headaches.

ACTRON, A  REEVES VIDEO COMPANY. 565 FIFTH AVENUE, NEW YORK, N.Y. 10017, (212) 687-6586

Quo Vadis, Multi-Media?

(Because magic alone is
no longer enough)

By Stanford Sobel

BOSLEY CROWTHER recently took a retrospective look at motion pictures and wrote as follows:

"When movies were first exhibited to the public, they were magic—sheer magic—only that. They were an experience so novel and amazing that the thrill of looking at them (of seeing pictures actually moving before one's eyes, out of context from all experience of nature) was all anybody wished. Those were indeed the days when the medium, just the medium—was the message. That was enough. Thousands, even millions of people, were fascinated by the magic of random images moving on a screen.

But the novelty of mere movement didn't last long. Repetitions of railroad trains rushing at you or school girls skipping rope or factories soon became quite monotonous. Thus occurred the first indication of a phenomenon that has been persistent in the commerce of the screen: the pertinent peril of transition from magic to monotony."

This very same "persistent phenomenon" applies to multi-media presentations today. A lot of people look upon them as magic . . . pure magic. (One of the systems in fact is called the "Laterna Magica".) But others,

and their number is increasing geometrically, are bored and annoyed by the monotony . . . pure monotony . . . of the multi-media presentations they see. With good reason.

Both the state-of-the-art and the public response to multi-media presentations, can be traced by simply following their development in the various world's fairs since 1962.

At the Seattle Fair, the public was all wide eyes, open mouths, and rapt attention. At Brussels the pace quickened and exhibitors began to go for multi-media in a big way. The New York Fair saw an all-time number of multi-media presentations, with exhibits ranging the total quality spectrum, with some that were truly great and others so incredibly bad they were either never opened or promptly forgotten. By Montreal, a culling-out process had taken place, and quality reached a new high water mark. There were no second-rate multi-media exhibits at Montreal. Every single pavilion was outstanding. Even the worst of the exhibits at Montreal was far above the median at the New York Fair.

The exhibitors had learned their lesson painfully, and at great cost, in New York. By the time the trek had begun to Canada, only the outstanding was acceptable. This was a zenith, a high water mark in quality, and after Montreal quality dipped again in San Antonio.

But in San Antonio a new factor entered the equation. Not only the exhibitors had learned their lesson. So had the public. In Montreal, the public had learned that there is no reason for multi-media exhibits to depend solely upon the magic of moving images. They can also have content, and that content can be as exciting as format. At San Antonio, it developed, the public had stepped out in front of the exhibitors and just weren't going to be satisfied with the "magic" of moving images in multi-media. They wanted content, and it wasn't there, and some of them even grumbled about getting their money back. The sad fact is that San Antonio was a financial failure very largely because of a word-of-mouth advertising. The word got around that there really wasn't too much there worth seeing, and after that the Hemis Fair never recovered its original momentum.

Writers follow the multi-media rhythm from Seattle to San Antonio . . .

And now . . . enter the writer in a quite different role . . . vital . . . crucial.

It is partially as a result of this historical imperative that the role of the writer has become more important in multi-media. Actually, the writer can play almost any kind of role in a multi-media presentation, all the way from that of the passive bystander who steps into the picture with

Continued on next page

ABOUT THE AUTHOR

Stanford Sobel has written scripts for World's Fair exhibits at Seattle, Brussels, New York, Montreal, and San Antonio, and he is currently working on several exhibits for the upcoming fair in Japan. He is one of New York's leading scriptwriters of business films, documentaries, TV, and theatrical features. This article is based upon a speech originally prepared for presentation to a convention of the Public Relations Society of America.

Quo Vadis, Multi-Media? . . .

continued

a few typewritten pages to be recorded on a sound track, to that of the original source of the idea for both the conception and the hardware. He can be either important or unimportant in terms of either the form or the content, or both or neither.

It certainly is an unqualified fact that the closer the form expresses the inner content of the material, the more successfully the multi-media presentation will communicate. And this is especially true if you're trying to communicate an image as well as information per se.

A recent experience of my own can help illustrate this. I was called in to help a producer do a multi-media presentation for

an agency's new business department. While we were still outlining the flow of information, the agency called to say we had to put the presentation on that very afternoon because they had an unexpected opportunity to show their expertise on short notice with a totally different prospective client. We had barely enough time to get to the agency, set up our equipment, and check our notes before the new prospective clients came in. We had two movie projectors, five carousels, both horizontal and vertical crawl widescreen filmstrip projectors, seven front and rear projection screens, a tape recorder which was interlocked with colored strobe lights, and a pro-

grammer to synchronize the whole presentation. We also had three speakers who weren't sure when they were supposed to go on in this melange of audio-visuals, and a fourth man, an account exec who had never met any of us and who was supposed to summarize the whole presentation although he had never seen any of it.

As you can imagine, it was a mess, a genuinely unqualified disaster with everything happening at the wrong time and everyone coming in off cue. We were truly shattered and discouraged, and crept away quietly and depressed.

An hour later, the account exec called us jubilantly to tell us they had landed the account. "But, but, but . . . it all went wrong!" we kept saying. "Who cares?" he answered. "They didn't know it was all wrong. Neither did I, for that matter,

except at a couple of points. The fact is, they were completely dazzled by it, swept 'em right off their feet, they haven't the foggiest idea what they saw, except that they're convinced we're a really go-go outfit who will give them something fresh and exciting and original. As for what we actually say about their products, they know they'll have the final word on that anyway. The whole thing was perfect as far as they're concerned. By the way . . . leave the equipment here if you would. We'd like to put on the same show for another prospect."

As I said before, the writer can play almost any kind of role. Despite the above example . . . the script is becoming more crucial an element in International Expositions than ever before. Even from this early vantage point, it looks as if Japan will have the best fair yet, and it also looks like there will be almost no pure dazzling displays for the sake of dazzle alone.

There is still a lot of secrecy about individual exhibits, but the underground has it that form and content are to be integrated in Japan, to an extent never before attempted. In Japan, the multi-media content will have become an integral part of the multi-media form.

It is now an accepted fact that the outer expression, (the hardware) should be a true projection of the inner feeling tone, (the script). Magic alone is no longer enough.

And what all of that means is that writers are going to be a more important element in determining the success or failure of the next World's Fair, than has ever before been true. That is an enormous opportunity for creative expression, one to which multi-media writers are responding with enthusiasm and with all the skills they have acquired over the years.

If this International Exposition turns out to be as successful as it currently looks like it is going to be, the Orient will be brought so close that the name "Far East" will be even less appropriate than it is today. And if it is that successful, then the contribution of the writer, his role in creating and implementing the meaningful message of the medium, will have reached a new plateau of creative responsibility from which there can be no retreat in the future.

Sanford Greenberg Elected President

FPA Foresees Employment Progress

NEW OFFICERS for 1969 were announced by the Film Producers of New York at an annual meeting, March 18, at the Columbia University Club.

Sanford Greenberg, of DFI Communications, Inc., was elected president. Other officers for 1969 are Irving Hecht, (Cinefects, Inc.) vice president; Charles Ticho (Fred A. Niles Communications Centers) secretary; and Robert Gross (American Film Producers) treasurer.

FPA's Board of Directors is now composed of the following members: John Babb (F&B/Ceco), Manny Casiano (Berkey-Pathé), Ronald Cohen (Jerome J. Cohen), Joe Dunford (Pelican Films), Dan Eisenberg (Movielab), Eli Feldman (Focus Prod.), Warren Fox (PGL Prod.), Harold Friedman (Savage-Freidman), Ira Marvin (Viafilm), John Monterola (Film-Fair), Lou Mucciolo (Audio Prod.), Bill Sohl (EUE/Screen Gems), Bill Susman (MPO Prod.), Jack Vorisek (Reeves), and Sam Magdoff (Elektra), past president.

Sanford Greenberg, new president of the FPA, has played a leading role in New York film industry affairs for the past 13 years. He has been on the Board

Sanford Greenberg, FPA president.

of Directors since 1959, and has been particularly active in industry-labor relations, heading a committee aimed at stabilizing relations between producers and the various production crafts. The results of this committee have been notably successful, particularly in recent years, culminating in the formation of COMPEC, which provides machinery for resolving labor disputes without strikes, and is ded-

icated to maintaining the high stature of the industry in New York.

Greenberg, who is a certified public accountant, and graduate of Pace College and Columbia University (M.A.), first became active in the industry by joining MPO Production in 1956 as chief financial officer. Up until March of 1969, when he resigned to join DFI Communications, Inc., as vice president, Greenberg was vice president and treasurer of MPO, also serving on the company's board of directors.

In a recent interview with BUSINESS SCREEN, Greenberg said that FPA would continue to foster the professionalism and high ethical standards which have been recognized as significant in New York production activities. Greater emphasis will be placed this year on continuing investigation of the parameters of videotape use in the industry. An FPA committee is presently working on this.

Greenberg foresees more progress throughout the industry in the provision of employment opportunities for minority groups. He also expects union and management groups to continue their joint efforts to improve the level of quality in the profession.

Encouraging Study of the American Negro

Helping to solve the mystery of the black man, this new filmstrip from the Jam Handy Organization for Coca-Cola shows where students can learn more.

Lerone Bennett, Jr., Ebony Magazine senior editor, author and professor of History at Northwestern University in the filmstrip, "Black Treasures."

The filmstrip shows that both the past and the contemporary experiences of people of African descent are described in books, manuscripts and other documents.

In some states, Negro history courses have become part of the regular school curriculum.

Where can Negroes find proof of their heritage? The filmstrip provides the sources for Negro history.

The desire to know and understand the true history (right) of the Negro is growing among both blacks and whites.

organizations concerned with promoting an appreciation of the Negro's past, encouraging an understanding of his present status, and enriching the promise of the future. For example, New York's American Society of African Culture is a source of documents and historical material for scholars and the general public. Here, one can learn how black African culture filtered through Egypt to eventually influence Greek civilization.

In the Schomburg Collection of the New York Public Library, Negro history is documented in over 33,000 volumes. At Oberlin College in Ohio, the tragedy of slavery unfolds. Here, books and exhibits from the earliest days of American history tell the story of people who suffered, yet survived to establish a tradition of courage and resourcefulness.

Negro art is featured at Howard University's Gallery of Art, while the Soper Library collection at Baltimore's Morgan State College is a monument to the many unacclaimed Negro writers who refused to let discrimination stifle their creativity. Atlanta University, in Atlanta, Georgia, offers the Slaughter Collection — one of the most outstanding collections of books written by Negroes in America.

These sources, and many others, are shown in *Black Treasures* along with several of the contemporary Negro historians who are adding to this ever-growing fund of knowledge and understanding about the black man and his contributions to America. Already, the influence of these Negro historians is being felt in schools and on the public. In some states, Negro history courses have become part of the regular school curriculum.

In short, the film, narrated by Donald Haney of "Haney's People", Detroit's WXYZ-TV personality, says that the Negro need no longer remain a mystery to anyone — that the story of his history is well-documented and available to anyone who seeks it out — and that the places where it is recorded are, indeed, *Black Treasures!*

For additional information about *Black Treasures*, write Kelvin Wall, The Coca-Cola Co., P.O. Box 77085, Atlanta, Georgia 30301.

IN RECENT YEARS, the black man has been the subject of television, radio, magazines and books. He has been the cause of political controversy, social debates, and sweeping changes in America and the world.

"But still — the black man remains a mystery. He remains a mystery because, in spite of the recent attention he has attracted, his history, his past — his heroes, his triumphs and much of his suffering — cannot be found in most of today's textbooks.

"White students read these books in the hope that a true account of past events will help them understand current and crucial racial issues. But, too often, these books leave them with misconceptions and myths about the Negro.

"For Negro students, reading these history books are vain and frustrating attempts to discover their heritage, to discover their identity, to learn what contributions their ancestors made to the spread of civilizations — to find out what role these ancestors played in the development of America."

The above is a quotation from introductory comments to the new color filmstrip, *Black Treasures: A Guide to the Study of Negro Life and History*, created by The Jam Handy Organization for presentation by The Coca-Cola Company in cooperation with the Association for the Study of Negro Life and History in Washington, D.C.

Black Treasures is an 11-minute presentation designed to encourage the study of black Americans and their contributions to American society by showing the sources of well-documented Negro history that are available to those who seek them out. The color film and recording emphasize the need for a more thorough understanding of Negro history by black and white Americans alike and illustrate some of the major collections of books, original papers, art objects, manuscripts, microfilms and exhibits throughout the United States which tell the story of the triumphs, the suffering and the achievements of Negroes.

These collections are the result of efforts by individuals and

The desire to know and understand the true history (right) of the Negro is growing among both blacks and whites.

A Little Frontiersmanship, A Little Frontier & Vice Versa

LIKE EVERY HAMLET, town or big city in the world, Seattle, Washington has its own metabolism which is as different from the next place on earth as its people are from inhabitants who live in the next place on earth. This metabolism is as characteristic of its businesses as of its people.

Slow where it should be fast, progressive and atypical where it should be typical, Seattle may be in many ways, the last frontier

own or manage a team. This, of course, made all the team owners and managers happy and pleased with my presence. So much so that they began calling on me. One owner needed a pitcher on a Sunday afternoon. Tuesday night, another owner needed a right fielder. And Saturday following, I received a call to take over shortstop in a double-header. Needless to say, I was always fresh and full of fire. Each day was different, each confrontation

frained from producing more than one spot because he had no more than one concept for the media, I might be able to provide an idea or two that would turn the one-spot job into a two or three-spot job. In any case, anything can happen to create more business for a producer; only certain things can happen to reduce it.

The more I discussed the matter, the more convinced I became that what Seattle really needed

Turning a variety of filmmaking knowledge into a unique new business, Marvin Albert serves local producers on a "whatever-needed" basis.

in America. For me it is. And I love it.

Having worked for a local motion picture production company for two years, I became a part of the atypical machinery that no longer functioned one day. Yet, everything in me pressed on to function regardless of the immediate situation. Said I to myself, "Muffo Pictures is no longer producing. What do I, then?"

For what it's worth, for those it may help and for those it may hinder, here is what I did. I looked at myself squarely in the two-way Seattle mirror, looking at myself against the background of no more than one good-sized and four small-sized existing production companies likely to remain in business long enough for me to decide what to do.

Being non-competitive by nature, I projected, indeed, fantasized, and imagined myself a professional ball-player who played every spot from catcher to third baseman on a relatively good team for two years, when all of a sudden the team folded. I had made friends with my teammates and players from other teams. I liked pitching as well as fielding, liked one team as well as the other. In fact, I would like very much to have had the chance to play a game, or two for all the teams year-round. One thing I didn't want to do, however, was

had a new set of problems to be solved in totally new ways. And the owners were more than pleased to have a player so fresh and enthusiastic. No permanent ties with lengthy contracts full of loopholes enabling one or the other party to slack off in performance. In fact, I had to outplay every man on the permanent team in order to play a game in the future. Incentive on both sides of the non-contract turned out to be ideal.

A long metaphor for a quick decision, but it worked. For two years I had written, directed, edited, performed in sound and lighting capacities, photographed, prepared proposals and formulated contracts for motion pictures. I enjoyed all aspects of my work and realized the Seattle situation could stand the addition of services years before it could stand the addition of competition.

I discussed my capabilities to several producers. They seemed enthusiastic about the prospect of having an immediately available writer-director in the area. One producer was especially interested in my services in the capacity of grip. For his particular organization has no ideaman. I suggested grip work to him, myself, explaining the potential hiding behind the scene. If I were gripping on a small job for him, a TV spot, for instance, and the client had re-

frained from producing more than one spot because he had no more than one concept for the media, I might be able to provide an idea or two that would turn the one-spot job into a two or three-spot job. In any case, anything can happen to create more business for a producer; only certain things can happen to reduce it.

With my office in my head and my company on my shoulders, I set out as Motion Media Films: Some, any, all or part of motion picture production; services offered to motion picture producers, advertising agencies and television stations.

The first call I received was from Cue Productions. A one-man organization owned by Ted Simpson. Could I shoot three minutes of film for him for one of his clients? I could and would, anytime, anywhere. And I did. Job done, I delivered the film to the lab in his name and billed him for my time. One week later I started looking for a permanent position with a local shoe store. At least selling shoes brings in enough money for food, rent and clothing, I said out loud.

But I received a call the following Monday. Another producer, a larger company, wanted a TV spot produced from scratch. They were busy to the hilt and did not want to lose a client that had more work coming up the following month. I produced the spot and had just delivered the originals to the lab when I had a message waiting for me to come back at my convenience.

The producer had just secured a contract for a film and needed a writer to script a ten minute picture.

Since those first few trying weeks, I have done writing, photography, editing, sound, lighting, sales and concept jobs for many of the Seattle producers. In some cases, for advertising agencies who came to producers for TV productions from scratch, script and all.

Naturally, ethics are a great part of my existence in the business I am in. My allegiances are with each and every producer I work with and for. Information is strictly confidential. I must remain now and for ever on neutral ground. And above all, I must not and do not compete for films. If I am favored for any reason, or called by a client to write, direct or shoot, I insist the production company I was employed by originally be contracted with and advise the party of my availability. When I am contacted to do a picture or spot in the capacity of producer, I give the job over to the producer most capable of the particular demands and I am paid a commission, just as any salesman would be paid. If the job warrants my talent, I am hired to perform in any one or more capacities. In this method I have found the means of *creating* work for myself in a literal sense.

I have, so far, been called on in all facets of production: Writing, directing, shooting, editing, consulting, sound recording, lighting, sales, A/B editing; I have accepted all assignments local or out of town.

While my idea seems to work, it, nevertheless, depends on the ultimate consideration of the producers. After all, they do have a staff, however small it might be. It is not difficult to see that I must out perform my more secure co-workers. But I am in a more advantageous position to do so because my employment is on a piece-work basis. I know, without reservation, a totally new experience lies ahead of me the moment each job is over. I believe the producers who have employed me believe this, too.

My optimism is not overshadowed by enthusiasm. I work one day at a time, one job at a time. I know where I am . . . Seattle! By the time you read this your wife may have already purchased a pair of shoes. From me!

AMRAM NOWAK Associates, a well-known sponsored film company in New York for the past ten years, has completed a feature film which is scheduled for a New York opening at the Little Carnegie Theatre early this spring.

While the sponsored film field has supplied the theatrical feature film industry with a number of producers, directors and writers in past years, very few production companies specializing in sponsored films have gone into feature films as a logical extension of their business.

"Logical" is exactly the term Amram Nowak, head of the firm, uses in describing his new venture. "Up until just a few years ago," he says, "most feature film production meant big Mitchell cameras and giant Houston cinemas. It meant budgets well beyond the means of the sponsored film maker. But now we are in the midst of a technological revolution; first in the underground movies, and recently in such films as *Faces*, *Greetings* and *Endless Summer*, it has been proved that low-budget but high quality films made with portable 16mm equipment can be successful at the box-office."

Nowak's film is *King, Murray*, which is, briefly, about a wild weekend junket to Las Vegas with Murray King, a real live hyperbolic super insurance salesman.

The film originated in Nowak's production schedule following the success of several self-sponsored shorts which convinced him that a feature film would not be beyond the means of his facilities, which are largely devoted to the making of documentary films for such organizations as the National Tuberculosis Association, Public Broadcasting Laboratory, National Educational Television, Metropolitan Life, U.S. State Department, Bureau of International Affairs, and others. One of these shorts, made two years ago, *A Day with Tim Page*, proved to be enormously successful. It

David Hoffman, vice president and creative director of Amram Nowak Associates, who directed *King, Murray*."

Feature Films—A Logical Extension for Industrial Producers?

"Yes" says this New York producer whose feature "King, Murray" is opening at the Little Carnegie Theatre. And, the film joins a few other current features in proving that low-budget, high quality films made with portable 16mm equipment can be successful at the box office.

was sold to PBL for a one-shot TV performance, won six awards at various film festivals, and brought a contract from Eastman Kodak to do a major TV commercial based on Timmy Page, a young boy-film maker of Storrs, Conn.

The idea for the film originated with Nowak's partner, Dave Hoffman. Murray King, the star of the film, who is actually the firm's insurance agent, struck him as being a remarkable subject for a film. When King invited them to Las Vegas, Hoffman talked Nowak into taking the plunge and making King the subject of their first feature. Together with Jonathan Gordon, who co-directed and took sound, four suitcases full of camera equipment, and their toothbrushes, they set off with King for Las Vegas.

After three incredible days with only two hours sleep, and with 30,000 feet of exposed 16mm color film, the Nowak crew came back to New York and started to hack away at the materials for several weeks until they were sure there actually was the core of a feature film in Murray King's Las Vegas experiences.

So, several more days of shooting were scheduled in New York and other places to flesh out the junket footage until a rough cut two-hour film was worked out.

It is a long hard journey for the documentary film trying to break into the commercial theatres. The first big break in this direction that Nowak and Hoffman got was when Sheldon Gunsberg of the Walter Reade Organization, a big New York exhibition company, took a look at it and believed it might be potentially commercial. He encouraged them to go on with it.

After several more months of editing, a 35mm blow-up print of a 90-minute film was made, and a major Wall Street investor, Leeam Lowin, entered the picture as co-producer with capital enough to finance completion and a New York opening in a prestige theatre.

King Murray, which will probably be compared to *Faces*, which it follows into the

AMRAM NOWAK

Little Carnegie, is actually much different. *Faces* started and finished as a completely scripted film with the emotional fireworks and the documentary appearance developing from the extraordinarily personal style of camerawork and the direction of John Cassavetes. *King, Murray*, while shot in a somewhat similar camera style, actually grew out of the documentation of actual happenings, and was only somewhat fictionalized when the film was well along.

And, rather than in cinema verite style, in which the handheld camera is purely an observer of undirected happenings, *King, Murray's* cameras and film makers are an important part of the action in a totally original film form.

Amram Nowak has a broad background in the cinema arts. He taught dramatics at Syra-

Continued on next page

logical extension . . .

continued

cuse University and later worked in the Broadway theatre for two years. After that he served as writer and director at CBS and ABC until founding his own film-making company in 1959. Forty-five major documentaries have been produced and sixty awards have been received. Nowak's partner, David Hoffman, 27, is one of the coming "young film makers" — can express himself with camera in hand as other creators need a typewriter or palette. He directs, is an outstanding cameraman and editor.

The fate of *King, Murray* will be known after the critics and film buffs in the first

week's audiences pass judgment. But in sneak previews held recently audience reaction has been violent. Twenty people walked out of one performance in outrage. Yet more than half the same audience thought it was an exceptional film. Few viewers have been impartial — they either love it or hate it.

Amram Nowak believes that many of the techniques of this new-wave of theatrical cinema are equally applicable to the sponsored film. Regardless of the outcome of *King, Murray* he has no intention of abandoning his first love, the sponsored documentary film.

Murray King and Laura Kay, who plays one of the girl friends in the feature "King, Murray", which opens this month in New York.

Oxberry Optical Printer Star of Bright New Film

A REVOLUTIONARY special effects optical printer has been introduced to the motion picture industry by means of a new film, *Control*, which describes its features by using the same features in the production.

The printer, the Oxberry Model 5117-80, incorporates an entirely new optical light system eliminating the conventional automatic iris and replacing it with a lightvalve, which might be likened to a venetian blind. This valve automatically maintains light output for the camera in all positions in conjunction with four projector heads.

Control, which was filmed by Animated Productions, Inc., in association with engineers of Berkey Technical, a division of Berkey Photo, Inc., integrates a series of engineer-designed schematic drawings of the new light system with live action sequences — then superimposing an animated sequence of the light in action over both live action and schematic drawings. This combination of techniques was planned to provide the viewer with a visual tour-de-force of what might ordinarily be a lengthy and dry sequence.

The same patter was used to demonstrate, first, how the printer functions in segments; then to combine segments together through graphics, animation and live action, illustrating the integrated relationships of the elements of the printer.

Since the Oxberry Printer, beyond its principal features, is

comprised of a great number of other important elements, this presented a problem in terms of illustration, demonstration, and length of film. Since it was to be no longer than ten minutes, some two dozen or more important features of the machine had to be compressed into less than three minutes. Here again, the skilled hand of Al Stahl, head of Animated Productions, as designer and animator created a series of split screen, multi-image sequences, combined with animated light sequences demonstrating the difference between uncontrolled and controlled light, giving the opening of the film a fast-moving and brilliantly paced montage that is as exciting as it is informative.

Music was another aspect of the overall design of the film. Though original music was not used, credit must be given to the producer for the exacting selections and integration of music into the sound track to intensify the visual effects used in the film.

It is important to note that the completed structure of the film itself becomes a demonstration of a finished product that can be turned out by the very machine it is portraying. This, then, becomes the testimony to yet another feature of the machine: precision control. Even though this is demonstrated during the course of the film, it is very evident that the special effects and techniques employed in the film could not have been done with such great precision

had it not been for the printer.

Working with Al Stahl on the film were A. Kip Livingston, of Berkey Technical, as Executive Producer; J. Landsman, script; John Oxberry, director; and Milton Forman and Harry L. Parker, of Berkey, as co-producers.

Control was first shown at the Photokina in Cologne last fall.

It has since played to audiences of motion picture engineers and technicians throughout the world. It was awarded a Gold Medal at the International Film and Television Festival in New York last October, and was included in the recent hour-long program of motion picture optical effects held at the Museum of Modern Art in New York.

Star of the film "Control" is this Oxberry special effects optical printer Model 5117-80, in live, animation and combination sequences.

Our hero, Dr. Speak-to-the-Mind-through-the-heart, is considering the challenge of applying his creative talent as a producer to pioneering effective and meaningful new uses for film in today's world.

ONE THING CAN be said for a producer; he is involved. Crisis is his daily bread. In addition to the routine maneuvers of solving the unsolvable and surmounting the insurmountable, he must find within himself an endless well of creativity to be forced to the surface upon demand by pushing the button that says, "Give Now."

Therefore, it is not illogical to assume that a producer feels that once a brainchild is born and delivered in swaddling clothes to a proud and happy client that his responsibility as creator is fulfilled. He has earned, if little else, respite.

But in so doing, perhaps the producer is overlooking a challenge made to order for his particular attributes. A challenge, which met, could do unique justice to his profession and to himself.

Suppose, for example, the producer found an additional button on the control panel that had been overlooked before, one that says, "New Uses." Upon pushing the button, the producer finds himself programmed into new thinking patterns. His mental vision broadens to national and international scope and he sees himself as he really is — an influential motivator of the greatest numbers of people the world has ever known. Of course, he has been aware of his influence to a degree. But for the first time, he fully recognizes his power.

He finds himself playing the childhood game: "If I could have three wishes, what would they be?" (He knows that now his wishes can come true.)

Because he is a producer, he has a feeling for people. This is one of his principal attributes. The well from which his creativity flows must have a source; this source is emotion. He gives a damn. So his wishes have to do with the welfare of people.

Heretofore, the producer has devoted his formidable creative forces to the film itself. Meanwhile, technical marvels have kept pace so that now the producer finds himself in the position of a musician who is given a dozen more octaves to play in. In searching his imagination for ways that he, as motivator of masses, can better their welfare, his programmed mind is directed to New Uses for Film.

His imagination surges from the old confinement and his thinking goes like this:

"During President Nixon's campaign, he said, 'Bring us together.' What better way to bring the people, especially the ignorant and hostile minorities, and the government together than by intelligently conceived and properly produced film projects, using television and every other method of film exhibition? If the problems which confront our nation and the world today could be reduced to one common denominator, it would have to be a lack of effective communication. What else?

"Therefore, my first wish is for a crash program of effective film *communication* which probes all the sore spots and offers honest conclusions and solutions, no matter how painful, to both sides.

"Included in this program would be strong, very strong medicine to inspire. Who

lives today whose difficulties have not been equalled and overcome by someone else in similar or worse circumstances? The difference between triumph for one and defeat for the other is the fabric of the human spirit. We must consider a man to be more than a stomach; we must regard and minister to him as a whole man.

"Enter our hero, Dr. Speak-To-The-Mind-Through-The-Heart, the producer. Because it is emotion we must deal with. Merely tossing facts back and forth won't do the job.

"As a beautiful example, consider the film, 'Charly.' Anyone who sees this gem can never again think of the mentally incapacitated in the same way he has before. Was this film made for that purpose? Who knows? Furthermore, who cares? The film is superb by every standard, and the fact that what could have been its purpose is achieved, is incidental to the enjoyment of the viewer. Listen to the audience exult with Charly as he cries, 'I beat him! I beat him!' This is what filmmaking with a purpose is all about.

"Suppose this kind of talent and dedication were put to work in the production of films to change the public's ideas and atti-

truck unit similar to the one Ladybird Johnson presented to the wife of Mexico's President, for health education in rural areas. Such a truck might have multiple panels which unfold outward in accordion fashion. As each panel would have two sides, there would be plenty of exhibit space outside the truck for pictures or other visual materials. Inside would be one or more motion picture and/or slide projectors which would project outside to a screen or upon any light, flat surface such as the side of a building. Sound could be amplified, if desired, depending upon the size of the audience.

"Students cannot or will not go to school? Bring the school to the students. Are there areas needing medical or agricultural information, here or abroad? Take it to them in precise, on-the-spot visual demonstrations. Are there places without electricity where films could never be shown before? No problem. Wherever people need help, or wherever the government needs help from the people, the 8mm projector or the mobile truck unit are ready to go.

"Anywhere in the world.

"Washington needs this. For example,

ENTER OUR HERO

Shuler Productions
Dallas, Texas

tudes about other things. Suppose these films were scheduled in a crash program on television, exhibited in theaters, shown in schools, offered as program material to PTAs, church groups, civic and fraternal organizations, and so on. What would happen?

"Consider, then, what is happening now, when programs at the other end of the spectrum are available any hour at the turn of a knob or price of a ticket. Who made these films? And, in the making, is none of the responsibility shared? And let's not kid ourselves about what's being shown. I don't buy the theory that 'If I don't do it somebody else will, and make the money.' Plenty of money is to be made by doing something better. Finding the market is the problem, and this brings us to the next wish.

"My second wish is simply that the best production brains in the motion picture industry get together and brainstorm new uses for films and ways that film may be used to our national benefit. These uses will open new markets.

"To be considered might be more imaginative uses of the self contained 8mm sound projectors, as well as a mobile projection

Russia's massive propaganda drive in India, an all-media crash-upon-crash Hate America program is, to quote Carl Rowan's column of February 25th, causing the United States 'considerable alarm.' Among other things, our comrades claim that 'Richard Nixon, who now walks into the Presidency over the foully murdered corpses of his two great rivals . . . owes his office and power to J. Edgar Hoover, the executioner of his rivals . . . ' et cetera and please pass the paragon.

"So here we are, an articulate nation, with the best advertising and public relations expertise on earth plus the most advanced motion picture and television technology, sitting around biting our nails instead of getting in there and fighting fire with more and better of the same. Comes wish 3.

"My third wish is that we create a series of films for foreign distribution about the United States of America which does us justice for a change. In fact, we could use some of this at home. We seem to be on a sinner's-bench, flagellation orgy. It's time for balance, and I for one am good and ready for a solid dose of flag-waving, pointing-with-pride and God-bless-America." Enter our hero. •

JOB FILM FAIR

*A unique
new idea
for employment
and training
films*

to better understand him through the use of film is rapidly and steadily growing. These groups are not limited to community agencies or organizations; they also include industrial, business, and labor groups, independent and commercial filmmakers and distributors. The result is an expansion in the scope and demand for such films, as well as in their availability.

Community groups, such as the Urban League, make and distribute such movies. Specifically, their film, called *The Road Ahead* tells the story of two young men — one white, one black — who lose their elevator jobs, but make a successful comeback in another job. A similar "orientation" film used by a community organization is *The Fresh Start*, which discusses a Puerto Rican youngster's adjustment to the Job Corps.

Industry also is making and distributing films which help provide understanding and alleviate employment problems which relate to the urban crisis. Bell Telephone Company, for instance, has produced a 28-minute film called *Appointment with Tomorrow*, which tells the job-seeking youth how to present himself most effectively to a potential employer. Comparably, *The Individual*, by Polaroid Corporation, deals with an important aspect of job adjustment. In it, the head of the company discusses how his firm retrains its workers who are displaced by automation.

U.S. Steel, McGraw-Hill, MacMillan, Litton Industries, Raytheon, IBM, Inland Steel, and International Paper are some of the other industries that have sponsored this type motion picture.

One very effective film was made in color by Sunburst Films called *Take A Giant Step* (see *Business Screen*, Jan. 1969). This movie is the story of the Watts Manufacturing Company, a project under the auspices of Aerojet General Corporation, to help reverse the unemployment trend in the Watts ghetto. It follows a young black worker from the street into the company where he proves to be an effective employee.

Roundtable Films has also recently announced a film which deals with the employment of the "hardcore." Entitled *Management, Motivation, and the New Minority Worker*, it seeks to answer the question of "how will first line supervisors react when the "hardcore" employee comes to work in their departments?"

These films reflect the fact that "training" is not being aimed only at employees or potential ones, but at employers as well. By presenting the world of the unemployed ghetto youth and some of his assumptions about work and its rewards (or lack of them for him), movies can build a better understanding on the part of the employer.

Some young persons who live in the ghetto have themselves shot such films. One organization, Mobilization for Youth, sponsored a film workshop which resulted in the production of at least two outstanding films, *The Game*, adapted by Roberta Hodes, and *You Dig It?* written by Leon Williams. The

former earned the Plaque of the Lion at the Venice Documentary and Short Film Festival. The latter was shown at Expo '67. Although these may not seem like "training" films to the "purist," they offer employers insight into the heritage with which his employees come to him.

Ironically, although many significant and useful films exist to aid those involved in training, there has thus far not been a central source for those wishing to utilize them. Industrial leaders, for instance, frequently are unaware of what films other industries have used in training. Realizing the situation, the American Foundation on Automation and Employment, a non-profit labor-management organization, has organized what it calls the Job Film Fair. The two-day showing of films and holding of seminars will take place May 21-22 at the Americana Hotel in New York City. Because it is the first film festival of its kind, its planners hope it will serve as a model for communities outside New York.

The available films, which are geared to reach employers, community groups, unions, governmental agencies, public affairs organizations, schools, universities and research groups, communications firms, and training consultants — tend to fall into four categories. They are: (1) films which orient businessmen about ghetto residents' environment and assumptions, or inform them of approaches to recruiting, training, and upgrading the hardcore employee; (2) those which orient hardcore residents about the world of work; (3) those which convey respect for the heritage of Black, Spanish-speaking, Indian, and other minority groups; (4) those which are used in remedial education and training.

Accordingly, the Job Film Fair plans to award prizes and recognition to outstanding films in these categories.

The method of selection for awards and showing at the Job Film Fair is unique. Panels composed of representatives from each of the groups at whom the films are aimed (employers, agencies, schools, filmmakers and public affairs organizations) in addition to outstanding personalities, will rate and evaluate the films using a standardized two-page evaluation sheet supplied by the Job Film Fair. It should be noted that although the evaluation sheet places stress on content and impact, the questions also deal with technical film quality.

Seminars will also be held during the two-day Film Fair. These will be broken down by subjects, to somewhat parallel the types of available films. Topics to be included are: *Understanding the World of the Ghetto*, *Orientation toward the World of Work*, *On-the-Job-Training*, and *Development of Business Entrepreneurship in the Ghetto*.

It is anticipated that the unique approach of the Job Film Fair will help alleviate the problem of locating effective training films, and provide an outlet for filmmakers.

Further information can be obtained from the Job Film Fair, 452 5th Avenue, 9th Floor, New York 10018. •

"When we consider the problems and issues confronting our communities today, training is perhaps the most dynamic tool that can effectively wage the fight against poverty. As a problem-solving method, training can be as generic or as specific as the manifestation of the problem situation."

— New York Training Institute

THE TRUTH of this quotation, as well as of the old maxim, "a picture is worth a thousand words," is the basis of a boom in a broad new area of filmmaking today. The number of groups who offer training to the so-called "hardcore" employee or who seek

The Eastman Color System. What's in it for you?

Everything. Everything you worked for on the set. Everything you dreamed you'd see on the screen.

With the Eastman Color System you get a team of quality films, chemicals, processes, and professional Eastman Kodak Company personnel, all working together, for you.

When you go Eastman all the way, you're getting the best of everything out of it.

HOW DID WE MAKE THE "QUIETEST, BEST PERFORMING, MOST PROFESSIONAL REFLEX BNC CONVERSION" EVEN BETTER?

...by adding original auxiliary finder
with matched captive cams!

You might say we've improved on perfection. You just can't top a reflex camera for tight shots, zooms and dollies. For swish pans, quick tilts and long shots, however, the addition of the finder offers the last word in comfortable viewing. The power-packed advantages of a synchronized-to-lens finder, plus reflex viewing, provides you with an unbeatable combination. And, it's all yours with the CSC Reflex BNC Conversion.

It's very much worth your while to send for further details TODAY!

**Want to put new life
in a tired lab processor?**

**Call
TREISE!**

**Your best source for
fine quality accessories
and replacement parts**

If your lab processor is performing "below par," give it a new lease on life with fine quality Treise accessories! Our new-type heat exchangers and precision controls accommodate the higher temperatures required by the latest film emulsions. We can supply you with new ball-bearing rollers guaranteed to "roll free," improved film spools and bearings, sound track applicators with micrometer control, self-powered wax applicators, high efficiency squeegees, close-tolerance sprockets, and many other accessories specially designed for smoother processor performance.

WE BUILD . . . REBUILD . . . or REPLACE!

Treise engineers have the specialized knowledge needed to build any size of continuous lab processor . . . from small compact B&W models to high speed 150 fpm capacity color processors, and to provide maximum film capacity consistent with high quality and within practicable budget limits. Whatever you buy from Treise — from a giant processor to a tiny part—you have the assurance of performance possible only from a manufacturer noted for its outstanding laboratory experience!

"Cheshire Puss," said Alice,
"would you tell me please, which
way I ought to go from here?"

"That depends a good deal on where you
want to get to," said the Cat.

"I don't much care where —" said Alice.

"Then it doesn't matter which way you
go," said the Cat.

If you don't care about the quality of
your filmstrips or color slide duplicates, it
doesn't matter where you go. Any labora-
tory will do. But, if you care enough to get
the very best, come to Frank Holmes Lab-
oratories. Here you will find an outstand-
ing enthusiasm for perfection in every
department. Letters from customers all
over the world praise the zealous care we
give each job, no matter how large or how
small. Try us on your next job
...and find out for yourself!

Men at Work . . .

Each story line for each film produced by Holland-Wegman . . . each concept . . . each shooting script receives loving attention from a variety of people . . . writers, directors, cameramen, animation artists, film directors, yes, even our laboratory technicians.

Before our cameras roll you can be sure that a plan has been worked out and refined to give you the best possible answer to your communications problem. We like to start working with you at the

very beginning . . . when the problem of what to communicate and what audience to reach is laid before us.

We believe in being business-oriented first and transferring our business background and understanding of industry problems to the creation of motion pictures and slidefilms to provide you with an answer to your problem, whether it's sales, employee orientation, education, public relations, or whatever.

During the past year, we've worked for

United States Steel, Ford Motor, Xerox, the Department of Health, Education and Welfare, National Gypsum, The United Fund of Cleveland, Marine Midland, and a number of other names you'd recognize. They've presented some problems to us . . . we think we've provided some answers.

If you have a communications need, please call us. We'll try to give you the benefit of our creativity . . . balanced by our business sense and cemented together by our attention to detail.

WILTON, CONNECTICUT

O'Brien - The Writer

AREA CODE 203 • 762-8400

IFPA JOURNAL

INFORMATION FILM PRODUCERS OF AMERICA, INC.

Washington Chapter Doubles Size

Sixteen Navy film-makers and one independent producer filed application for membership in the Washington Chapter during the first week in March, nearly twice as many as the original charter of ten, and coming within two members of tripling in size since February 1st. All sixteen of the Navy men were recruited and sponsored by LCDR Sims Howell, publicity chairman for the chapter, while the independent producer (and AF Reserve Major) was sponsored by Lt. Col J. C. Stokes.

The new members include: Manuel Perez, Willard Jansen, James Lamont, Wayne Barnett, John Horton, Carroll Bates, Don Richter, Gregory Kennedy, Robert Sorrell, John Hunt, John Lewin, John Conway, Paul Coulter, Vincent Madonia, Dick Wade, all present Navy Department personnel; James Morrison, former Marine cameraman, now in independent production; and Wolfram Dochtermann, AF Reserve Major, also an independent producer.

The March meeting of the rapidly expanding chapter, was hosted by Art Rescher of Byron Motion Pictures, Inc. and was held at the Byron installation. In addition to the normal business of the chapter, the meeting included a guided tour of Byron's newly constructed and most modern film processing laboratory.

Future programming of the Washington Chapter includes a plan to invite presentations by contemporary non-theatrical film-makers, whereby techniques and production problems in our ever-changing state of the art, can be discussed at length.

JOHN HYND

San Diego IFPA's John Hynd Directs Nixon European Tour

John Hynd, motion picture director and president of John Hynd Motion Picture Enterprises in San Diego, was tapped to direct the three camera crews for Hearst-Metrotone News during President Nixon's recent tour to the heads of state in London, Paris, Rome, Bonn and West Berlin, according to Ralph Hall, executive director of IFPA.

Hynd, who charted the course for Lyndon Johnson's twenty minute documentary last July, of the (then) president's visit to five Central American presidents, not only directed President Nixon's documentary film, but was commissioned to edit the completed picture, subject to approval of the USIA and public relations department of the Presidential staff.

Script writer Betty Miller, also an IFPA member of the San Diego chapter, who wrote the script for the Johnson film — *The Beginning of our Journey* — has been selected by Hynd and the USIA to write the story for the 30 minute Nixon documentary, which is scheduled for distribution to overseas audiences in May of this year.

Miss Miller, senior writer with Convair motion picture and TV department, wrote, directed and edited the *Monster Buoy*, Convair's multiple award winning film in the 1968 CINDY race. Presently co-authoring *Exploration of The Solar System* and *The Exploration of Interstellar Space*, with space

scientist Krafft Ehrlicke, (publication date 1969, by Silver-Burdett) — this incredibly busy young woman has made nearly 150 films for Convair, according to John Hynd. Hynd further commented, with a great deal of feeling — "We're lucky to find Betty with a spare moment."

The United States Information Agency, Washington, D.C., will release the 35mm color print.

LA Chapter Hosted at MGM

Irwin Rosten and Nicosol Noxon, who head up the newly activated Documentary Film Department at Metro-Goldwyn-Mayer Studios in Culver City, were hosts to a capacity attendance of the Los Angeles Chapter at the regular monthly meeting in March.

The theme of the evening's program as brought forth by Rosten and Noxon, and illustrated by extensive film demonstration, concerned the relationship of documentary production to major studio affiliation, or, "How To Make A Feature Film on a Documentary Budget, and Vice Versa."

Northern Cal Hears Stensvold

At a joint meeting of the northern California chapter of IFPA, and the San Francisco chapter of SMPTE, held on the sound stage of W.A. Palmer Studios in San Francisco, members and guests braved heavy rains and standing room only, in order to enjoy an evening with Alan Stensvold, cameraman for the Bob Hope Christmas tours for the past fifteen years.

Stensvold showed out-takes from the 1968 Viet-Nam Yuletide presentation, as well as a series of color slides taken on various other trips with Hope. Following the visual part of the program, Stensvold conducted a question and answer session which covered anything from electrical power requirements to the overseas cameraman's Shangri-La . . . the military PX.

Alan Stensvold (center) at the Northern California meeting with Dick Foster (right) and Chapter President Ray Hollingsworth (left).

Boston Site of Next IFPA Chapter

Seven members-at-large in the Boston area have made formal request for a charter to the IFPA Board of Directors, in order to form an IFPA chapter in the Bay State. Headed by John C. Dowd, president of Bay State Productions, and George A. Wells, Director of Public Relations of the Massachusetts Department of Commerce and Development, the new division is expected to get under way in April.

PLEASE RUSH!

You pride yourself on being a good on-time producer. But how many times have you been caught in unforeseeable delays during writing, production and post-production phases of the show?

Too many to remember?

Then you said to the lab: "I know we're late, but we've just got to meet our deadline."

At Capital we realize that this is the nature of the business: "PLEASE RUSH!" So we've done something about satisfying your needs—like using an IBM Production Control System; building a scene tester that's compatible with Bell and Howell's modern color additive printers; printing from double rank internegatives for higher quantity—and quality.

We're used to rushing for you at

3-D Projection System Uses Any Available 16mm Film

A NEW PROJECTION system that is capable of showing any 16 mm film ever made, for viewing in three dimensions (3-D) is now being manufactured and marketed by Ingenuics, Inc. of Gaithersburg, Md.

According to Dwin R. Craig, president of the company, "the new system gives the observer the feeling of depth — besides the regular features of motion, color and sound — and the feeling of being *in* the picture".

The system, called "InVision", should be useful for projection of educational, scientific, industrial and military films where the added dimension of depth would be both entertaining and informative.

The complete InVision system, Model IN552, consists of a 16 MM self-threading sound projector, an image adaptor, a special projection screen and viewing spectacles — priced at \$1,969.00.

The Model IN552 uses a modified version of Bell and Howell's Specialist Autoload Filmosound 16 mm projector wherein two adjacent frames of any conventional film can be projected simultaneously. The image adaptor, external to the projector, differentially polarizes and restores vertical registration of the two images at the screen. The screen surface is metallized to prevent depolarization and masked for the lens and projection distance employed. The viewing spectacles are differentially polarized so that

The InVision system, ready for use, shows the external image adaptor on the front. It polarizes and restores vertical registration of the images at the screen.

each eye sees only one of the projected images. The mental process then translates the resulting binocular presentation into a realistic perception of depth.

Ingenuics, Inc. was formed in 1968 to commercially market optical and photographic products bought from and originally developed by Fairchild Hiller Corporation. The InVision system, Model IN552, is the first of such products to be offered to the commercial market.

This 4-inch attache case opens to a movie theater.

This elegant attache case is the most compact projector in the world. The Bohn Benton Institor is the first truly portable, rear screen, Super 8 sound movie projector. It's automatic. It's set up and running in less than 20 seconds. And, it's cartridge loaded to eliminate film threading. Films can be changed in 2 seconds.

It's also a front screen projector. On the spot, you can convert to project an auditorium-size, 6 foot wide picture. Zoom lens and external speakers are available for group viewing. The Bohn Benton Institor lets your films sell for you every day; on every call, in every office. This is the projector salesmen will carry because it looks good, it's small, and it's light. The newest recruit can give a professional presentation on

every call. He can take your plant, your products and your services to the desk of every prospect. It's easy to give an Institor to every salesman because its price is as extraordinary as its size — \$250. That's half the cost of other first-quality rear screen projectors without Institor's advantages.

For more information, or an Institor demonstration, write Bohn Benton Incorporated, 110 Roosevelt Avenue, Mineola, New York 11501; or call (516) 747-8585.

KEYS TO LISTING DATA

The detail-in-depth of these listings of business and television film companies provides the sponsor, advertising agency and government film buyer with a complete picture of his prospective producer.

In addition to names of principal officers and data on services and physical studio facilities, the facts on "Recent Productions and Sponsors" show the nature of recent studio experience, of films produced in the past year. Preview current pictures as a prerequisite to purchases; bidders should also provide factual data on experience, staff, facilities and financial stability.

There was no charge or obligation whatsoever to these listed companies; every known source was contacted with three separate first-class mailings. Only those who furnished evidence of recent production or were newly-organized were accepted for unqualified listing in these pages.

NEW ENGLAND STATES

poration: Fram Filters; Falstaff Beer; and Coca Cola Company.

Our Credo for Reference Quality

There will always be more "names" of so-called "producers" in phone books or other directories because these Production Review listing pages are restricted to those companies who meet our stringent requirements for reference data needed by film buyers. With no charge made for any listing in this Review, we reserve the right to maintain a high standard of reference quality. Because we do, this book is the accepted authority used in agencies, business and government throughout the year.

Sound Advice for the Film Buyer

A careful study of the prospective producer's listing text is a prerequisite to film buying. See the pictures listed by the company; note the nature of client references. And if the prospective producer isn't listed in these pages visit his facilities; meet permanent staff personnel and view current pictures identified as his own productions.

Sound Advice for the Film Buyer

A careful study of the prospective producer's listing text is a prerequisite to film buying. See the pictures listed by the company; note the nature of client references. And if the prospective producer isn't listed in these pages visit his facilities; meet permanent staff personnel and view current pictures identified as his own productions.

Equipment Operation and Maintenance; *Guided Missile Launching Systems Mark 10 Mod 7* (US Navy); *Crucible of Hope* (Eastern Baptist College); *Passport to Opportunity* (Philco-Ford); *Mr. Walker's Retirement* (First Penn Co. Our Credo for Reference Quality

There will always be more "names"
of so-called "producers" in phone books
or other directories because these Pro-
duction Review listing pages are re-
stricted to those companies who meet
our stringent requirements for reference
data needed by film buyers. With no
charge made for any listing in this Re-
view, we reserve the right to maintain
a high standard of reference quality. Be-
cause we do, this book is the accepted
authority used in agencies, business and
government throughout the year.

Widely Imitated — But Never Excelled!

During recent decades, these Production Review listings have been widely imitated, from "midget" handouts to bound volumes. But none of these sources provide the facts-in-depth or specializing producers which have made these annual listing pages the best in the industry.

The Guide You Need All Year Long

Extra copies of this 19th Annual Production Review are available by mail (while supply lasts) at \$2.00 each, sent postpaid when payment accompanies order. Better yet, order a year's subscription—and get BUSINESS SCREEN each month for only \$5.00 in the U.S. and Canada.

Sound Advice for the Film Buyer

A careful study of the prospective producer's listing text is a prerequisite to film buying. See the pictures listed by the company; note the nature of client references. And if the prospective producer isn't listed in these pages visit his facilities; meet permanent staff personnel and view current pictures identified as his own productions.

Our Credo for Reference Quality

There will always be more "names" of so-called "producers" in phone books or other directories because these Production Review listing pages are restricted to those companies who meet our stringent requirements for reference data needed by film buyers. With no charge made for any listing in this Review, we reserve the right to maintain a high standard of reference quality. Because we do, this book is the accepted authority used in agencies, business and government throughout the year.

Our Credo for Reference Quality

There will always be more "names" of so-called "producers" in phone books or other directories because these Production Review listing pages are restricted to those companies who meet our stringent requirements for reference data needed by film buyers. With no charge made for any listing in this Review, we reserve the right to maintain a high standard of reference quality. Because we do, this book is the accepted authority used in agencies, business and government throughout the year.

Sound Advice for the Film Buyer

A careful study of the prospective producer's listing text is a prerequisite to film buying. See the pictures listed by the company; note the nature of client references. And if the prospective producer isn't listed in these pages visit his facilities; meet permanent staff personnel and view current pictures identified as his own productions.

Our Credo for Reference Quality

There will always be more "names" of so-called "producers" in phone books or other directories because these Production Review listing pages are restricted to those companies who meet our stringent requirements for reference data needed by film buyers. With no charge made for any listing in this Review, we reserve the right to maintain a high standard of reference quality. Because we do, this book is the accepted authority used in agencies, business and government throughout the year.

Sound Advice for the Film Buyer

A careful study of the prospective producer's listing text is a prerequisite to film buying. See the pictures listed by the company; note the nature of client references. And if the prospective producer isn't listed in these pages visit his facilities; meet permanent staff personnel and view current pictures identified as his own productions.

Track, Highway Tire Tests Shown in Goodyear Film

The copious procedures involved in track and highway testing of tires and some of the safety techniques employed by professional test drivers are described in a new film now available on loan without charge from The Goodyear Tire & Rubber Company.

Sequences for *Test Drive for Safety*, a 16mm motion picture in color and with sound, were filmed at various auto racing events, during a formal racing tire test, at Goodyear's proving ground in Texas, and on public highways. Running time is 13 minutes.

The first half of the film is concerned with auto racing and its relationship with improved passenger tires, and with testing at the huge Texas proving ground. The final portion of the film follows a Goodyear test driver through a typical 400-mile day of tire testing on highways in Ohio.

Requests for the film, including preferred and alternate dates for showing, may be sent to: Public Relations Department, The Goodyear Tire & Rubber Company, Akron, Ohio 44316.

"Come to Key Biscayne" Invites New Betzer Film

Florida's Key Biscayne — the nation's new "winter White House" — is the star and principal attraction of a unique new motion picture, "Welcome to Pleasure Island," produced for Western Auto Supply Company by Betzer Productions Inc., Chicago.

This Fall, Western Auto will be host to 1,000 of its dealers and their wives for an all-expense-paid Key Biscayne vacation.

The color movie, now being shown to more than 4,000 West-

ern Auto dealers throughout the nation, presents a thrilling "appetizer" to the many attractions the company's "lucky" dealers will experience at this fabled Florida luxury resort.

Unique among commercial films, this 24-min. movie spends its first 22 minutes building up the boating, fishing, golfing, sightseeing and gastronomical pleasures of the Key Biscayne area as seen through the eyes of a typical Western Auto dealer and his wife — then presents Western Auto's President A. C. Swanson in a brief closing invitation to "Join us here at Key Biscayne!"

And he issues his invitation, not from his Kansas City office, but seated comfortably on the well-known "leaning palm tree" on the Key Biscayne Hotel putting course — a favorite vacation spot for President Nixon, Jack Paar, Billy Graham and other Key Biscayne habitués.

Betzer production crews shot in the Key and Miami areas between last Fall's Republican Convention sessions, when Candidate Nixon was also headquartering at the Key Biscayne Hotel. Joe Betzer directed with Maryanne Clark and Joe Michaels in the leading roles.

Helen A. Krupka wrote the script. Joe Slattery narrated the voice-over portions, and Arthur F. Ellis edited.

The Role of Insurance Investments on Economy

Mission: U. S. A. is the title of an informative new 16-mm color film released by The Equitable Life Assurance Society of the United States and distributed for free loan by Association Films, Inc.

The film tells the story of a young foreign exchange student who visits an American family and during his travels throughout

the United States learns how an important part of our competitive enterprise system works. During his trip he captures his impressions of our country and the American economy in action with a home movie camera and tape recorder. Along with our visiting student we learn how billions of life insurance assets serve double duty by protecting policyholders and at the same time stimulating our country's economy. We see first hand how this giant pool of capital is used in urban renewal projects, business enterprises, and even in the academic community, and why insurance investment dollars are a key foundation stone of our economy.

Produced in association with Film Counselors, Inc. by RFG Associates, Inc., the 27-minute film is available to junior and senior high schools and adult organizations through many Association Films' distribution centers.

"Life and Breath" — The Pathos of Emphysema

The life story of a man who suffers from emphysema — the fastest growing lung ailment today — is told in an interesting 14½ minute color film produced by Crawley Films for the Canadian Tuberculosis & Respiratory Disease Association.

Life and Breath goes backwards in time, showing the disease in a 50-year old man, and all the things that contributed to it when he was 40, 30, 27 and 12. The seriousness of the condition, its exact nature, and the apparently small and harmless acts which bring it about are fully explained.

The 16mm film, designed for use on TV and at local community meetings, shows how em-

**Before you decide
who should make your film...
let us help you decide whether
Maybe you need videotape instead.**

Sure, our film customers rank us among the top professionals in the industry. Just ask AT&T, Bendix, Reading Railroad, and Optical Scanning to name a few. We make filmstrips, slide presentations, and multimedia systems too.

But the technology and techniques of communication are expanding rapidly. We consider it our charter to remain on the forefront of these developments with a marketing-minded, technically-oriented staff that recommends what's best for our customers. Not what we want to sell.

That's why, in addition to our regular professional film production facilities, we now have a fully-equipped mobile videotape facility. Not just a production group, this videotape staff is skilled in discussing and solving your problems, be they in training, sales promotion, or audiovisual recording.

Maybe it isn't a film you need after all. Maybe it is. It won't cost you a dime to find out. Just call us collect at 215-647-2260.

physema makes people into respiratory cripples who are always short of breath. There is at present no cure for emphysema. The disease, often coupled with bronchitis, kills more than 1,600 Canadians a year and it has crippled a million.

Among the many causes of emphysema, smoking is regarded as one of the major ones. Ninety percent of all emphysema sufferers smoke.

While the film is primarily a serious information vehicle, many of its ingredients are entertaining. Frank Perry, who plays the central character, appears as 50, 40, 30 and 27 years old. Irene Kent, one of Canada's leading makeup artists, helps Frank put across these difficult characterizations.

French and English prints can be borrowed free of charge from the Canadian Tuberculosis and Respiratory Disease Association, 343 O'Connor St., Ottawa 4.

**A Look at the Japanese
Steel Industry, Trade**

Steel and Japan graphically documents the relationship between Japan's steel industry and that nation's international trade. It depicts the substantial growth of steel consumption in Japan and the nation's two-way trade with other countries needed to sustain Japan's steel industry.

Available on free-loan through Association Films' libraries, 600 Grand Avenue, Ridgefield, N.J. and 561 Hillgrove Avenue, La Grange, Ill., and 2221 S. Olive St., Los Angeles, Calif., this 28-minute 16mm color film is being presented in the United States by the Japan Steel Information Center, 230 Park Avenue, New York, New York 10017.

**Ford Library's Latest
"Listen, Listen . . ."**

Listen, Listen . . . is the latest in a long list of Ford Motor Company produced educational aids available from the Ford Film Library. Intended primarily for high school sophomores, this 16mm 18-minute color film urges the viewer to "listen" to his own calling in life — concerning his education. Featured along with the mayor of Cleveland, a graph-

ic artist, a 25-year-old independent businessman, and a husband-and-wife team at a Job Corps Training Center, is Bill Anders, youngest of the three moon-circling Apollo 8 astronauts, describing his teenage ambitions to become an engineer.

Twenty other rent-free educational and entertainment films on travel and recreation, research, career guidance, driver instruction, auto racing, automotive history, vehicle design and manufacture, and automotive safety are offered rent-free. Designed for college students is a video color tape on Ford's pioneering work in hiring of culturally disadvantaged persons in the first of a 10-part series.

**Encouraging Vital Growth
Factors in Organizations**

A theory of management that stresses methods of encouraging the vital growth factors in organizations is outlined by psychologist Dr. Jack R. Gibb in *Emergent Management*, a 16mm film now available for sale or rental from the University of California Extension Media Center, Berkeley.

The theory, tested over the past decade in a wide variety of industrial, educational, and community organizations, is aimed at promoting mutual trust, confidence, open communication and feedback within groups. Dr. Gibbs describes experiments showing that workers respond with higher productivity and better morale when managerial controls are designed to give them more freedom and responsibility in decision-making. In contrast, "defensive management," characterized by tight controls, a low level of trust and a high fear level, impedes efficient functioning by diverting potentially creative energies into unproductive counter-strategies intended to "beat the system" or to protect the individual, rather than to help achieve the organization's goals.

The 29-minute black-and-white sound film is the eighth in the Management Development Series produced under the supervision of Dr. Charles K. Ferguson, head of the Department of Conferences and Program Consultation

University of California Extension, Los Angeles. Further details of this film and others in the series may be obtained by writing to University of California Extension Media Center, Berkeley, Cal. 94720.

Look at Job Corps Police Training School

The first police training school for ghetto and other underprivileged young men is featured in a new documentary, *The Beat Goes On . . .*. The 28-minute 16mm film is available to urban schools, youth groups, community organizations and television stations through Association Films.

Photographed at the Camp Kilmer (N.J.) Job Corps center by Target Film Productions, it shows the rigorous, demanding program that has been set up by the Corps under the supervision of The National Police Conference on PAL and Youth Activities. Young men who are admitted to the school are taught defensive skills, marksmanship and classroom courses, leading to a high school equivalency degree. As the film shows, they are trained in analyzing and coping with emergency situations such as robberies and holdups by exercising common sense and restraint.

The Beat Goes On . . . follows the first class of enrollees from initial interviews to graduation. The morale of the class is unusually high, in part attributable to the precision military drilling that is mandatory and the demanding competitive sports program. The "elan" or spirit shown by the men is apparent in the film.

The police training school has been cited as one of the most effective and successful in the entire Job Corps program. According to PAL officials every trainee has been assured of a job with a major police department if he

successfully completes the course.

Prints of *The Beat Goes On . . .* may be borrowed for group showings from Association Films' centers.

Fashion Merchandising Careers for Women

A new 16mm color film called *Careers in Fashion Merchandising* is available on free loan to women's groups and senior high schools.

The 20-minute film outlines the various career possibilities in the fashion field—third largest industry in the country—and shows how a young girl can prepare and educate herself for this work.

Prints are available from Modern Talking Picture Service film libraries throughout the country. Requests may be sent to Modern at 1212 Avenue of the Americas, New York City 10036.

Among the talented people the film shows at work are fashion editors, commentators and photographers, merchandise buyers and interior consultants.

The film is sponsored by Patricia Stevens International Career Schools and was produced by Calvin Productions.

Man's Hope to Harness Atom's Force for Peace

Government and industry joined forces to study whether nuclear explosions can be safely used to perform massive underground engineering tasks for more efficient recovery of natural gas in the 14-minute color motion picture *Project Gasbuggy: The Resourceful Atom*.

The story of how man's hope to harness the atom's explosive force for peaceful purposes moved closer to fulfillment deep beneath a plateau in northern New Mexico in December 1967 was produced by the United States Atomic Energy Commis-

sion's San Francisco Operations Office and the El Paso Natural Gas Company.

Art and animation used in about one-third of the film illustrate the test objectives, what takes place underground when a nuclear explosive is fired, and the expected effects of the explosion on the gas reservoir.

For further information, write the Chief, Audio-Visual Branch, Division of Public Information, U.S. Atomic Energy Commission, Washington, D.C. 20545.

Bureau of Mines Shows Tennessee Resources

Tennessee and Its Natural Resources shows modern conservation practices that have spurred the economic advancement of the Volunteer State, to confirm that the growth and health of a region are advanced through the wise development and use of its natural resources.

Included in the State's history are scenes of mining and many of the State's tourist attractions made easily accessible with the building of a State-wide network of highways and secondary roads.

Prints of the film can be obtained on free, short-term loan from Motion Pictures, Bureau of Mines, 4800 Forbes Ave., Pittsburgh, Pa. 15213.

Excitement Keynotes New California Documentary

"The challenge was born when the earth could no longer hold its boiling and churning masses. So fierce were the explosions they created the largest mountains in the land. A billion years later this topography would be called California."

So begins a new documentary film currently being shown throughout California and the United States. Presented as a public service by Bank of America and entitled "California", the half hour documentary was filmed by Wolper Productions of Hollywood.

"We originated the project with an eye toward making a definitive, high quality film about California," according to Rudolph A. Peterson.

The president of Bank of America, the world's largest bank, added:

"Our object was to be informative as well as entertaining; consequently, the film examines the state's problems as well as portraying its virtues. People who have seen the film say it captures the essence of the state by focusing on elements that have made it the leading edge of American society."

Neil Morgan, noted writer and expert on matters Californiana, served as special consultant on the color documentary which was written and produced by Jerome Jacobs and directed by Donald Wrye.

The recurring theme of the documentary is excitement, of people who like to be where the action is, who still move west "seeking the special excitement of California." Individuals singled out range from Theodore B. Shank, an Imperial Valley farmer, to Joyce Hoffman, a surfer, to Dick Steverson, a civil rights worker.

In underscoring the importance of agriculture to California, the film observes, "Diversity of weather and variety of terrain were here. Californians added scientific innovation." the result: 85 per cent of all wine consumed in the United States is produced from California grapes; and the state produces more than half of the nation's canned tomatoes and almost all of the canned cling peaches, olives, apricots, and figs.

Steverson, who heads a youth training and employment project in Watts, is shown telling a group of Negroes: "We get in trouble with the law and when we get out we want somebody to give us somethin'. I ain't givin' up nothin' here, as they say. As the saying goes, nothin' being given up here. You have got to want before you can get and you got to want bad. You got to want inside, here in your heart, you know, you got to have it."

"A unique and continuous rapport between the industries and universities" is cited as a key factor in California's stature as undisputed leader in aerospace.

The documentary also claims that California is the leader in rock music and that its artists are setting trends in pop art.

Such problems as smog and ghettos are not overlooked in this offbeat look at the state.

So far the film has been shown

to such diverse groups as the Los Angeles Chamber of Commerce, North American Aviation, high schools and Cub Scout packs, as well as being shown on television stations throughout the nation, including KABC-TV in Los Angeles. The film is available to service and civic groups and to TV stations for their public service programming through Modern Talking Pictures, 1212 Avenue of the Americas, New York, N.Y. 10036.

Hands Help Demonstrate Evolutionary Process

Emphasizing the relationship between the mind of man and his hands, *The Evolution of Hands*, vividly illustrates to intermediate-junior high age scientifically gradual genetic changes in the hands and feet of animals to clarify the basic concept of evolution and to introduce the associated vocabulary. Through comparative examination of prehistoric and living specimens, students observe the slight physical changes that have occurred over thousands of generations to produce such variations as the paw of a dog, the hoof of a horse, etc.

For further information concerning this ten-minute, 16mm sound motion picture, write: Journal Films, Inc., 909 West Diversey Parkway, Chicago, Ill. 60614.

Highlights Potential for Career in Distribution

The "action field," distribution, is realistically surveyed with actual classroom scenes, field trips and stories by former distributive education students in the 28-minute, color/sound motion picture *Distributive Educa-*

In this scene from "Distributive Education . . . Tell It Like It Is," students work in an actual retail store atmosphere to learn the skills of selling, display and merchandising.

tion . . . Tell It Like It Is!

Produced to encourage the one-third of today's teenagers who are destined to go into this field, to prepare now for their future; the film is being distributed on a free-loan basis by The American Vocational Association and The Sears-Roebuck Foundation. Request for loan prints to The Sears-Roebuck Foundation, 7435 Skokie Blvd., Skokie, Illinois 60076.

Race Drivers Profiled During "Indy 500"

Following a premiere at New York's Radio City Music Hall, the new short film *Profile of a Race Driver* was released for public distribution.

The movie, filmed at the Indianapolis Motor Speedway this year, is distributed by Universal City Studios in cooperation with The Firestone Tire & Rubber Company.

The selected short subject features Parnelli Jones, veteran race driver who failed to qualify for the 1968 race; Billy Yukovich, a rookie, driving in his first Indianapolis classic; Mario Andretti, champion driver seeking his first Indy win; and Joe Leonard, who qualified for the pole position in the race.

Profile of a Race Driver will be shown in 5,000 theaters throughout the world during the next 18 months.

Prints will be available for showings after December 5 by civic groups and schools through offices of Association Films, Inc.

Prints will also be distributed extensively in airport theaters, colleges and universities throughout the country.

Corning Glass Highlights Far Eastern Cuisine

Authentic preparation of native dishes, important festivals, and appropriate music combine to become *The World in Your Kitchen—Far Eastern Cuisine*, a half-hour color movie produced for Corning by Rodney Clark of Show Associates. Recipes and cooking tips for many of the dishes shown in the film are given in accompanying brochures.

Available from Modern Talking Picture Service film libraries throughout the country. Requests for playdates may be sent to Modern at 1212 Avenue of the Americas, New York City 10036.

DuKane Corp. Offers Sound Filmstrip Projector

The DuKane Corporation has marketed a completely automatic, battery-operated tape Cassette sound filmstrip projector that starts instantly by pressing a button and shuts itself off at the end of a presentation. The Cassette Commander is capable of projecting a number of sight and sound sales presentations without recharging, or an unlimited number when its retractable power cord is plugged into any standard AC outlet. It is energized by a nickel cadmium battery pack which can be recharged overnight and which is charging whenever the AC cord is plugged in, even when the projector is in operation. For prolonged use away from power lines this versatile projector will function efficiently through a car cigarette lighter receptacle.

The tape Cassette provides high-quality sound and inexpensive duplication. It can be loaded quickly and, when the program is over, can be turned over and replayed with no rewinding.

Utilizing standard 35mm single frame filmstrip, mounted in a continuous coil, the projector has a picture capacity of 28 to 160 frames. Tape speed of 1 7/8 ips allows up to 30 minutes of recorded sound on each side of the Cassette.

The Commander uses direct

The Cassette Commander is the smallest of its kind on the market and weighs only 12 3/4 pounds.

optics to project on the rear-view screen. Further information is available from DuKane Corporation, Audio Visual Division, St. Charles, Illinois 60174.

Recover 98% Silver From Hypo Fix

An extended development program has led to the production of the new series of Lanco Silver Recovery Units. Two models are presently available, designed for maximum silver recovery in photo processing, cine processing, medical X-ray and industrial X-ray operations. Lanco equipment guarantees tight-

grain, 98% pure silver yields from hypo fix . . . with quiet, efficient operation.

Of special interest is the small amount of floor space required for either terminal or continuous recovery. For example, the Lanco "350", capable of recovering \$700.00 of silver per week, occupies only 4 sq. ft. of floor space.

The Lanco "200" (Laboratory Model) features recovery capabilities of 4 troy ozs. per hr., while the larger Lanco "350" can recover up to 10 troy ozs. per hr. As an alternate to standard Models offered, Lanco will custom design Silver Recovery Equipment to complement any print or film processing system.

For additional information,

write Graphic Associates, P.O. Box 245, Oakland, New Jersey 07436.

Integrated Videotape Reel, Box from Reeves

A newly designed video tape reel and box for spot duplicate distribution is now available from Reeves Video Division of Reeves Broadcasting Corporation.

This is the first reel and box designed by a tape duplication service specifically as an integrated videotape package for the distribution of spot commercials. The reel is of standard size (6 1/2" diameter) but is made of high-impact styrene molded to exceed SMPTE standards. It is ultrasonically welded, rather than cemented.

The rubber around the hub of the reel is of a new design to pick up the tape faster. A fine pebble finish is used.

After the videotape is placed on the reel, the reel is placed in a special double-walled, quilted plastic bag which completely seals the reel in a waterproof and dustproof environment. No outer wrapping is required.

The box was designed with triple thicknesses at the edges to resist crushing. Unlike former packages, there is no hub depression on the back; this area can now be used for application of a mailing label. When closed, there are no holes in the box, assuring dust-free shipping.

Reeves will market the package without tape in lots of 48 or more. The boxes will be available with the Reeves logo or with a standard imprint. When ordering quantities of 5000 or more, the customer may specify reel color. Multi-color boxes will be imprinted with the company design on request. Prices are competitive with reels and boxes presently available.

For further information write to Marketing Director, Reeves Video, 304 East 44th Street, New York, New York 10017.

Narrator 800 Provides Synchronized System

Montage Productions has introduced the Narrator 800, a compact, cassette operated record in machine with fast forward/reverse, one piece slide-sound audiovisual unit. Companioning with the Kodak Carousel Projector, the Narrator 800 forms

The Narrator 800 can be used for front or rear projection (when in conjunction with folding rear screen) for audiences from one to 300.

a single, portable, synchronized slide-sound system.

The unit is cassette operated with up to one hour of programmed operation. It includes an external speaker jack for house or remote speakers; built-in programming electronics to pulse the show by use of a pulse button which places an inaudible impulse on the sound track of the magnetic tape to automate the slide advance; and a microphone to narrate directly in the machine on the cassette with automatic record level control.

For additional information or details, write Montage Productions, Inc., 2 W. 45th St., New York, N.Y. 10036.

A-V Planning Check List Offered By Ralke Company

A check list for planning audiovisual presentations has just been completed by the Ralke Company, Inc. and is being made available on request at no charge.

This list acts as a reminder to architects and laymen alike in planning A-V systems, multi-me-

dia presentations, rear screen facilities and conference rooms. It covers all aspects of planning from the inception of the idea to the controls necessary to implement and install the operation, room sizes, placement and number of screens, media requirements, sound and TV requirements, response and testing systems, as well as wiring and conduit placement. If you would like to receive the check list write **Ralke Company, Inc.**, 640 North Highland Avenue, Los Angeles, California 90036.

Velcro Display Panels Hold Various Objects

New Oravisual Velcro Display Panels make it possible to display hundreds of objects no other type of vertical display surface will hold. Panels are all aluminum (size 28½" x 44½" each) covered with Velcro fabric. Objects of all shapes and sizes can be attached with a small piece of self-adhesive Velcro Hook Tape whose stiff hooks grip the invisible loops of the Velcro fabric. Objects can be attached and removed thousands of times without marring the surface.

Standard set of four panels with five leg assemblies makes a display unit 10' wide and 6½' high. Height can be reduced to 4' for window or table display. Panels are reversible, covered with black Velcro on one side and either red or green Velcro on reverse. Panels can be used individually or in combinations and can be arranged in a variety of shapes to fit floor space.

Send for full color literature to **Oravisual Company, Inc.**, Box 11150, St. Petersburg, Florida 33733.

Spindler & Sauppe Offer Two New Auto Projectors

Two new Selectroslide automatic slide projectors, capable of either random access or sequential operation, have been introduced by **Spindler & Sauppe Inc.**, Glendale, California.

Both versions, the 48-slide single magazine models SLS-750-B and the 96-slide dual magazine model SLX-750-B, will function in either mode without additional accessory equipment. As a random access projector, the operator may select and project any of the available slides at will. In sequential operations, the ma-

Random access Selectroslide Model SLS-750-B shown with 800 magazine and 810 standard remote control panel.

chine will project each succeeding slide.

Sequential operation may be controlled from the panel mounted on the projector housing, remotely by a standard one-button remote control cable, or by radio (wireless) remote control. Random access may be controlled by either the standard remote control panel, or by a new optional unit that also provides remote

sequential operation as well as remote focus control.

Write **Spindler & Sauppe Inc.**, 1329 Grand Central Avenue, Glendale, California 91201.

Genarco Offers Dual-Head Slide Projectors

Genarco, Inc., has announced a series of "significantly upgraded" dual-head, 3¼" x 4" slide-projector systems for front or rear projections. They are designed for color or black/white TV studios, theatrical staging and as a visual aid for teachers and lecturers. Image size depends on the lens and projection distance: For example, an image 20 feet wide is possible from a distance of only 22 feet.

Unlike conventional two-projection systems, the basic dual-head Genarco projector has only

Dual head projectors have solid state controls and are available in a choice of lamps.

one housing and operates from a single slide tray. The magazine holds sixty 3¼" x 4" slides in glass mounts or 70 in Polaroid plastic mounts. There are special adapters for smaller slides.

The dual-head system is completely remote-controlled up to 150 feet. Each channel has independent motorized focusing, but one is also equipped with a manual iris and wipe mechanism.

The two optical trains have their own lamps, condensers, heat filters and color-corrected lenses. There is a choice of 11 focal lengths.

For additional information, write **Genarco, Inc.**, 15-58 127th St., College Point (Flushing), New York 11356.

Buhl Markets Superwide Overhead Projector

The Buhl Projector Company of Farmingdale, New York recently developed a new overhead projector especially designed to provide an extra large picture in classrooms and training rooms with limited space.

The new Model 80-Superwide 10" focal length overhead projector, will, at any given distance from the screen, provide the biggest picture of any overhead projector available today. Only 5 feet from the screen, it will project a 5 foot square picture, nearly three times the projection area provided by a 14" focal length model. At a four foot distance, it will project a 4 foot square image, and at 8 feet from the screen, an 8 foot square image. To determine the image size from a given distance, the user merely takes the square of the distance.

The Buhl Model 80-Superwide features a 2-element lens and a compact head that won't obstruct the view of either the speaker or the audience.

The Model 80 Superwide is

Write, Paint or Draw on This Projection Screen

A new projection screen can be marked with pen, pencil, crayon, magic marker, paint—or almost anything else. This new screen helps slide films compete favorably with overhead projection.

Developed by Theodore J. Wilson, Jr., President of Imperial Products Co., Racine, Wisconsin, this teaching device offers color resolution and clarity comparable to "daylight" type projection screens. It is not necessary to completely darken the classroom under normal daylight conditions.

Called the "Mark 'em Screens," this screen can be used in the home or office, but it is of particular value in the school or industrial classroom for visualized instruction. It is no longer necessary to merely show a 35mm or 16mm slide. Now, to emphasize an important point or add a dimension or idea, this desirable teaching tool can be marked on, then discarded, leaving a fresh, undisturbed image. It is ideal for developing dealer salesmen, high school dropouts, executives, or shop employees.

For additional information, write T. J. Wilson, Jr., President, Imperial Products Co., Visual Aid Division, 2304 Carlisle Avenue, Racine, Wisconsin 53404.

High Intensity, Wide Angle Scoops Fit Varied Uses

Berkey-ColorTran, Inc. has introduced the "1000" and "2000" Tungsten-Halogen "Quartz" focusing and non-focusing scoops which provide high-intensity, wide-angle illumination for many applications in television and still photographic studios.

The scoops are ideal for use as a "base" or "fill" light. They are also suitable for clustering

Scoops may be used for either a base or fill light.

when lighting large surfaces such as cycloramas and "drops".

The focusing models "1000" (LQCS-15F) and "2000" (LQCS-18F) feature a specially designed diffusion lens which produces a smoother, softer and more even beam pattern. When higher intensities are required, the diffusion lens may be easily removed. Full-focusing control is accomplished by a pole operated steel ring at the bottom of the housing. During focusing, the diffusion lens moves with the lamp and maintains a fixed relationship to the lamp at all times. For additional information, write Berkey-ColorTran, Inc., 1015 Chesnut Street, Burbank, California 91502.

Programmer for Complex Multi-Media Programs

A new concept in automated show programming has entered the audiovisual field. Conceived and marketed by RSVP, Inc., of Indianapolis, this uniquely designed programmer makes possible elaborate multi-media presentations with a minimum of expense, but with the assurance of positive program control.

The "Program Director" is capable of automatic control of

The 10-channel unit is mounted in its own carrying case and weighs less than 20 lbs.

16mm and slide projectors, house lights, spot lights, stage curtains and mechanized displays in any combination. In either 10 or 20 channel units, the unit works off any magnetic tape player, and by utilizing a stereo tape player, control functions can be locked into the recorded audio portion of programming. The programming concept utilizes electronic impulses of varying frequencies to activate the several control devices.

For additional details, write Recorded Sales Visual Presentations, 1815 N. Meridian St., Indianapolis, Ind. 46202.

Projector Desk Doubles As Teaching Station

Smith System Manufacturing Company has introduced an overhead projector desk, which serves as a portable teaching station.

The unit can be used for either standing or seated use, with upper and lower levels on which to place any overhead projector. The desk is on casters for easy moving, has an overall size of 38" by 18" and is 30" high. The entire unit weighs 52 pounds. A 4" drawer is included for transparencies. For additional information, write Smith System Manufacturing Company, 56 S.E. Emerald, Minneapolis, Minnesota 55414.

Gordon Has Angenieux Auto Lens for Arri, Eclair

Alan Gordon Enterprises Inc. has available for immediate delivery the new Angenieux 12-120 Zoom Lens with automatic iris mounted for both Arriflex and Eclair cameras.

The lens, which normally comes with a "C" mount, is the newest in the Angenieux line and automatically adjusts exposure by means of a battery-operated motor which is an integral part of the lens system.

Further details on the Angenieux may be obtained from AGE Inc., 5362 N. Cahuenga Blvd., North Hollywood, Calif. 91601.

Bell & Howell Projector Serves Small Theaters

An automatic 16mm projection system for use in small theaters has been introduced by the Bell & Howell Company. Designed specifically to meet the needs of small automated thea-

This 16mm projection system can be operated from a remote control panel.

aters, the new system will accommodate all reel sizes up to 30 inch diameter which allows two full length features or any four-hour variable programming to be shown from a single reel. The 30 inch reels are of lightweight aluminum and contain in excess

of 9,000 feet of 16mm film. Automatic shut off can be programmed wherever desired on the film.

A high intensity light source projects either a flat or anamorphic format picture of professional quality in a semi-darkened theater. A stand by light source assures continuous performance and greater reliability.

The system is totally integrated and weighs less than 175 pounds with fully loaded 30 inch reels. It may be installed on ceiling or shelf mount or used on a floor stand. It was designed for ease of loading and servicing and operates on standard 60 cycle, 115 volt power.

For further information write to Bell & Howell Company, 360 Sierra Madre Villa, Pasadena, California 91109.

Brush-Ejector in New Film Cement Container

A long-needed improvement in film splicing (one of the necessary operations in all film handling) is offered by FilMagic/Distributor's Group, Inc. in the development of the Brush-Ejector Applicator, together with a new fast-setting film cement for B & W or Color Film.

The device consists of a patented valve which, when tilted, delivers a controlled amount of fresh film splicing cement from a refillable bottle onto a

The valve and brush in the new dispenser automatically retract.

brush which is protected against fraying by the valve tip. The ethyloid-based cement is capable of setting a firm splice within 5 seconds.

When the bottle and valve are returned to an upright position, the valve and brush retract automatically, sealing the bottle-neck against evaporation and gumming of the contents. Between uses, the bottle does not have to be re-capped, thus cutting considerable time from the film splicing operation.

FilMagic Film Splicing Cement is also packaged in pint cans and is available from Dealers or direct from — FilMagic/Distributor's Group, Inc. 204 — 14th Street, N. W. Atlanta, Georgia 30318 U.S.A.

Shure Offers Three Unidyne IV Microphones

Shure Brothers, Inc., has expanded its line of Unidyne dynamic microphones to include the new Unidyne IV, which has been especially designed to be the most durable microphone in the Unidyne family.

Among its new features is an attractive, all-metal case and a reinforced, cushioned cartridge that provides outstanding ruggedness and low susceptibility to

breath-blast ("pop"). Like all Shure Unidyne Microphones, the new Unidyne IV has an unusually effective unidirectional cardioid pickup pattern, which eliminates feedback and permits the microphones to be used closer to loudspeakers than usual, without creating feedback problems.

For additional information, write, Shure Brothers, Inc., 222 Hartrey Avenue, Evanston, Ill. 60204.

Automatic Timer for Rolleiscop Projector

An automatic timer for the Rolleiscop slide projector is now available from Honeywell Photographic Products.

The interval timer, described as "a key accessory," is built into a remote control cable that is connected to the projector in place of the normal remote control unit. A rotating knob at the side sets projection times for individual slides in a range from approximately 4 to 30 seconds. With the knob set at zero, the interval timer is turned off.

Manual focusing and slide changing is still possible when using the interval timer, by pressing the appropriate keys on the remote control unit. The timer will automatically send the tray contents of from 5 to 72 slides through the projector. For complete information, write Honeywell Photographic Products, 4800 East Dry Creek Road, Denver, Colorado 80217.

Dial Access Offered on Panacolor Projector

A dial-access model of the Panacolor Magazine Motion Picture Projector has been designed for continuous, automatic selection of any one of six sound film subjects at such locations as permanent and temporary exhibitions, conventions, trade shows and displays.

The projector, a table-top rear screen model, is part of the unique Panacolor system which utilizes magazines with a capacity of 120 minutes of motion pictures with optical sound. Any one of six separate films, each up to 20 minutes in length, can be viewed just by dialing the desired selection. The telephone-

type dial permits the viewer to choose and view the subject with extreme convenience. Before the dial has returned to its starting

Dial access device for the Panacolor projector is at right.

position, the selected color feature with sound is on the screen.

For additional information, write Panacolor, Inc., 100 E. 42nd St., New York, N.Y. 10017.

Versatile Control Serves Two Purposes

A detachable control unit which may be used as an integral part of the projector or as a handheld remote control box has been incorporated as a standard feature in all L-W 16mm motion picture projectors. Because it eliminates the need for a separate remote control unit, the device saves space and simplifies handling.

When not used for remote control, the control plugs directly into the projector. For remote control use, the unit can be detached

Solid state design makes the control compact enough to fit conveniently in the palm of the hand.

instantly and reconnected by means of a six-foot cable. Additional cable lengths are available to extend the control to any distance desired.

L-W projectors are Eastman Kodak models which have been re-engineered to provide flickerless operation for a wide range of

applications in industry, science, sports, engineering, medicine and other special fields. Further information is available from L-W Photo, Inc., 15451 Cabrito Road, Van Nuys, California 91406

High Brightness Ektalite Screen Offered by Kodak

A new high-brightness screen that will spectacularly enhance the display of any projected photographic image under normal daylight or room-light conditions has been announced by Eastman Kodak Company.

Providing images at least six times brighter than screens currently available, The Kodak Ektalite Projection Screen is constructed of specially treated aluminum foil and mounted in a 40 by 40-inch spherically curved Styrofoam case.

Because the new screen can be used without darkening the room in any manner, it is expected to receive wide acceptance in education, business, and industry, as well as among amateur and professional photographers.

The screen's specially grained aluminum-foil surface enables it to reflect back uniformly the majority of the light from the projector into the audience space within very distinct spread angles of about 60 degrees horizontally and 30 degrees vertically.

Equally important is the fact that when the screen is properly positioned, its specially grained surface causes any light originating outside these spread angles to be reflected away from the audience.

For more information, contact a regional office of the Motion Picture and Education Markets Division of Eastman Kodak Company: New York City at 200 Park Avenue, New York, New York 10017; Midwestern, 1901 West 22nd Street, Oak Brook, Illinois 60521; Pacific Southern, 6706 Santa Monica Boulevard, Hollywood, California 90038; Southeastern, 1775 Commercial Drive, N.W., Atlanta, Georgia 30318; or Southwestern, 6300 Cedar Springs Road, Dallas, Texas 75235.

Rechargeable Batteries Give Greater Power

Yardney Electric advanced rechargeable battery modules for professional television and motion picture cameras, recorders, and lighting equipment are offering cameramen greater power,

lighter weight and more freedom. The two types of battery modules are the Yardney Electric Silvercel silver-zinc battery and the Yardney Silcad silver-cadmium battery.

The Yardney Silvercel battery is the power source for CBS Laboratories' new Minicam Mark VI portable color television camera. The Silcad battery is used in the Ampex Corporation's new VR-3000 high band color videotape recorder. The Silvercel batteries will give up to 45 watt hours per pound, and the Silcad batteries provide from 22 to 44 watt hours per pound.

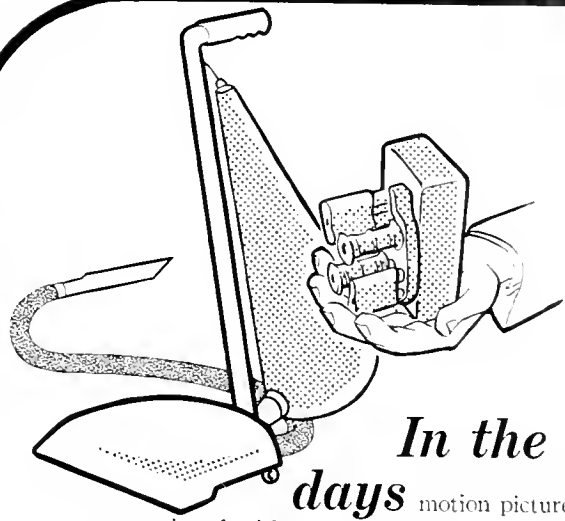

Further information is available from Yardney Electric Corporation, 40 Leonard Street, New York, New York 10013.

Ampex Offers Videotape Timer for Recording

A new electronic videotape timer that permits precise timing of recordings on Ampex VR-2000 and VR-1200 Series high band color videotape recorders and makes possible remote control of other studio television the market by Ampex Corporation equipment has been placed on tion.

The electronic timer digitally displays the time the video tape has been recording or playing back, either as "elapsed time" or as "time remaining." It displays

In the old days motion picture printers were equipped with vacuum cleaners that pulled off surface dirt during the printing operation.

Recently, some ingenious engineer invented the Air-Vacuum squeegee to do this. It works on the principle of having slightly more vacuum than air pressure, so that as dust is blown from the film surface, it is whisked away by vacuum before it reaches the printing gate.

These little gadgets don't cost very much, so instead of one for the negative, we also have one for the raw stock.

What does cost money is the special Air-Vacuum pump that supplies laboratory-clean air for the squeegees' proper operation.

How about you—screened any dirty prints lately? Next time you need laboratory services for your color prints, 35, 16 or Super 8mm, give the clean print people a call; we have lots of other little gadgets that work for us and can for you, to make better quality prints.

correct time for all television standards and at tape speeds of both 7½ and 15 inches per second. The timer also can automatically turn on or turn off other recorders, film chains and cue lights at any predetermined time within a program. This permits the timer to activate sequentially any number of events throughout the studio.

Up to four remote readout units may be used with each master electronic timer. The remote readouts allow station wide time monitoring of the videotape recorder. The master electronic timer is mounted in the recorder monitor housing. For additional information, write Ampex Corporation, 401 Broadway, Redwood City, California 94063.

One-inch EV-310 videotape recorder with remote control unit.

a rotary, two-head scan system. Recording time is 60 minutes on a 2,460-foot reel of tape. Tapes are interchangeable between all Sony EV-310, EV-210 and EV-200 Series Videocorders.

Standard features of the EV-310 are two-channel audio, editing and slow motion and stop action in the playback mode. The playback picture is continuously variable from still frame to one-fifth of normal speed. Audio may be dubbed on Channel 2 after video has been recorded. Automatic shutoff occurs when the tape reaches the end of the reel. Prices and specifications on the Model EV-310 are available from Sony Corporation of America, VTR Division, 47-47 Van Dam Street, Long Island City, New York 11101.

Richard Offers Idealite For 16x20 Transparencies

Richard Manufacturing Company has made available the Idealite for 16x20" transparencies. This model, the R-1620, is a companion to the popular model 010 and has the same even, color-balanced and heatless light. The walnut frame is attached to a special molded plastic back engineered in double parabola for two 18 watt fluorescent lamps. The vinyl coated easel permits the unit to stand on a table or be hung on a wall in either vertical or horizontal position. It is ideal for black and white and color transparencies and other back-lighted graphics as display and sales presentation illuminator.

For additional information write Richard Manufacturing Company, P. O. Box 2041, Van Nuys, California 91404.

Sony Offers One-Inch Videotape Recorder

A compact, portable one-inch format video tape recorder particularly suited to applications in education, training and CATV distribution is now available from the Sony Corporation of America.

The Model EV-310 Videocorder video tape recorder uses one-inch video tape and records any composite TV signal with a 60-field frequency, including random-interlace signals. Video recording is accomplished through

Audio Mixer Offers Wide Range of Applications

The Sonomix, a six-channel audio mixer intended for recording, motion picture, television and live applications, has been designed to accommodate the audio engineer who must work in exterior locations as well as in the studio. Features such as convertability between AC and Nickel-Cadium battery power supplies, inputs switchable between line and mike sources in any combination and exceptionally rugged construction are factors

Major components of this audio mixer are of modular construction making inspection and maintenance simple and service inexpensive.

which contribute to its unusually wide range of capabilities.

Designed especially for location work, the solid-state Sonomix can be powered for more than 30 hours through its rechargeable battery pack. Despite its rugged construction, the Sonomix weighs only 19 pounds.

To accommodate the audio engineer who requires a double duty mixer, plug-in components may be disconnected, providing a rack-mounted unit. For further information write Martin Audio Corporation, 56 West 45th Street, New York, New York 10036.

Christie Electric Offers New Illuminator Systems

The Christie Xenolite Model BF10-10M5 is one of several new series of Xenon and Mercury Arc Lamp Illuminator Systems. These consist of lamphouse with optics, rectifier power supply, igniter and bulbs up to 6500 watts.

The 450 watt lamphouse is particularly suitable for 8 and 16mm movie and 35mm slide projection, TV projections, display systems, trainers, studio and stage lighting.

The 450 watt lamphouse has a light output of several times that of an equivalent incandescent unit, daylight characteristics, and 1500-2000 hours average bulb life. Pictures are also sharper and colors brighter. Other Xenolite systems are available for lamps up to 6500 watts.

For additional information write Christie Electric Corporation, 3410 West 67th Street, Los Angeles, California 90043.

Craig Introduces New Color Video Recorder

Craig Corporation has introduced the Model 6403 Helical-Scan Video Tape Recorder, a color recording rotary two-head

system utilizing 1-inch wide longitudinally oriented tape. The unit with a tape speed of 7.5 inches per second, uses 9.5 inch diameter (standard NAB Hub) reels, delivering up to 96 minutes recording or playback time on 3600 feet of tape. Craig's 6403 records NTSC direct, plays back color with use of an accessory adapter.

Operational features include a double capstan drive for improvement of picture stability by eliminating horizontal "jitter", and skew control for correcting differences in tape tension and improvement of interchange of tapes from machine to machine. As an added convenience, all functional controls (start, stop, fast forward, play, record and rewind) can be operated with the cover of the unit in place.

Other features include recording of audio and video portions

All functional controls on the Model 6403 are located at right foreground of cabinet top and can be operated with the cover (not shown) in place.

independently of each other; built-in remote control capability; slow motion and still picture playback. Recording of a second track is optional with the unit.

For further information, write Craig Corporation, Products Division, 2302 East 15th Street, Los Angeles, California 90021.

Sylvania Offers Line of Tungsten-Halogen Lamps

Sylvania Electric Products, Inc. has expanded its line of tungsten-halogen lamps for television and motion picture studios with the introduction of 14 lamps, which have nearly three times the effective useful life of conventional incandescent studio lamps. The lamps are interchangeable with standard studio lamps and maintain uniform light output throughout their life. The average rated life of the tungsten-halogen lamps is more than double the average rated life of standard incandescent studio lamps.

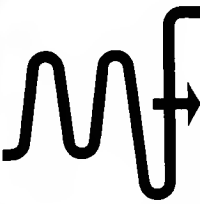

The development of the 14 lamps is divided into three series with wattage ranges of 500 to 1,000 and 1,000 to 2,000 was preceded by Sylvania's introduction of other new types, including the 2,000 and 5,000-watt tungsten-halogen lamps. The color temperatures of all these lamps remain stable while standard incandescent lamp color temperatures fall off due to bulb-blackening. Color temperature efficiency is maintained because the tungsten evaporated from the filament is not deposited on the lamp wall but is redeposited on the filament itself.

Other features include a greatly reduced bulb size and low-noise operation. Technical bulletins are available from Sylvania Electric Products, Inc., 1100 Main Street, Buffalo, New York 14209.

IVC Offers Videotape Editing in Color

Electronic editing in color is now available from International Video Corporation. The IVC-860 is a self-contained, portable videotape recorder which offers editing in color and is versatile as a master recorder in a wide range of closed circuit applications. It permits electronic soliciting or assembling from two separate program sources such as live cameras or other recorders without tearing, rolling or picture distortion.

The editing feature requires only one additional control and permits the operator to edit by switching from playback to record. For more information contact International Video Corporation, 67 East Evelyn Avenue, Mountain View, California 94040.

Communications Group West Formed in Hollywood

Communications Group West, Inc., Hollywood-based total communications company servicing corporate, government, labor, and educational organizations has been formed by Sidney Galanty and John Orloff.

Under Galanty and Orloff Communications Group West, Inc. has brought together a nucleus of leading writers, directors, production personnel to develop cameramen, editors and other and produce a full range of communications programs utilizing the media of motion pictures, video and audio tape, film strips, live presentations and graphics.

Galanty was formerly a television producer for Dancer, Fitzgerald, Sample, Inc.

John Orloff, one of the leading directors of television commercials in the country, has worked with most of the major national advertising agencies and with more than fifty leading American corporations.

Offices of Communications Group West, Inc. are located at 6532 Sunset Boulevard, Hollywood, California 90028.

Hal Marc Arden Completes Vision Week Package

Hal Marc Arden and Company, multi-media specialists, have recently produced a campaign package for National Vision Week, sponsored by the American Optometric Association. Film spots for TV, recorded spots and programs for radio, and posters for local display were distributed by AOA to its affiliates and to broadcasting stations throughout the United States. The professional society, numbering 16,000 optometrists, stresses the importance of vision care through periodic vision examinations. The Arden-originated slogan for the 1969 educa-

tional campaign was "Life Is Worth Seeing."

Specializing in medical and general education, Arden and his associates have completed a series of informational TV film spots and theatre trailer to be released in May by the National Association for Mental Health.

WRS Labs Offering Same Day ECO Processing

Ektachrome commercial (ECO) film processing, with same day service, is now available from WRS Motion Picture Labs, according to F. Jack Napor, WRS president. ECO is used in about 95 per cent of all professional 16mm color film production.

Inauguration of the new service makes Pittsburgh one of only six cities with facilities to process ECO on an independent basis. The specially-designed processing installed at the Sample Street laboratory will process 7255 Ektachrome commercial, plus EF, EFB and MS film, according to Napor.

Ektachrome prints with optical or magnetic sound are also available. Original film received at the lab by 10:00 a.m. is processed, work printed, edge numbered and shipped the same evening.

Eastman Kodak Reports Record Earnings, Sales

Eastman Kodak Company sales and earnings moved to new highs in 1968, William S. Vaughn, chairman, and Louis K. Eilers, president, reported recently.

Consolidated sales worldwide for 1968 (52 weeks) were \$2,644,064,000, or 11 percent above the \$2,391,542,000 of 1967 (53 weeks).

Worldwide net earnings were \$375,370,000, up \$23,113,000

or 7 percent from the 1967 total of \$352,257,000. The earnings were equal to \$2.33 a share based on the average number of shares outstanding. For 1967 the comparable figure was \$2.19 after adjustment for the two-for-one stock split declared in the spring of 1968. The 10 percent surcharge on U.S. income tax reduced 1968 earnings by approximately 20 cents a share.

Earnings from operations for the year 1968 were \$757,601,000, up 10 percent over the \$691,416,000 of a year ago. Earnings before income tax were \$789,370,000, against the 1967 total of \$700,757,000. The provision for income taxes was \$414 million in 1968 and \$348,500,000 in 1967.

Total cash dividends increased for the 20th consecutive year. Dividends declared came to \$188 million, an increase of 9 percent or \$15 million. Dividends per share were \$1.14, including an extra dividend of 28 cents.

At the close of the year, there were 198,850 Kodak share owners, compared with 176,650 at the end of 1967.

Elektra Films Moves to Larger New York Quarters

Elektra Film's latest expansion is a literal move to larger facilities on Madison Avenue.

"After 14 years on the West Side," said Sam Magdoff, president of the New York film firm "we've decided to see how the other half lives."

Most of the firm's live and animation facilities moved onto the entire fourteenth floor at 501 Madison Avenue in March.

Magdoff's move represents an increase in space of about three times the two smaller floors Elektra had occupied on 46th Street. Included in the floor plans of the new offices at 51st Street are screening and meeting rooms, a lounge, a sales department, ship-

ing, mailing and storage space and an environmental area in which Magdoff intends to maintain a rotating series of graphic displays.

BDO, Young & Rubicam Tops in 9th IBA Awards

Batten, Barton, Durstine & Osborn and Young & Rubicam carried off top honors in the 9th annual International Broadcasting Awards.

BBDO, New York, won the television sweepstakes with a series of three commercials for the Pepsi Cola Bottling Co.'s Diet Pepsi, produced by PGL Productions, also of New York.

Y. & R., New York, won the radio sweepstakes with a series of three public service announcements for the Mayor's Committee for Urban Coalition, produced by Six West Recording, New York.

Both sweepstakes winners previously had won trophies in the series categories. In all, trophies were presented in 12 television and eight radio categories.

More than 1000 advertising and broadcasting executives and their guests attended the awards dinner March 10 in the Century Plaza Hotel, which also was marked by presentations of the "Man of the Year" award in broadcasting to Dan Rowan and Dick Martin, stars of the NBC television "Laugh-In" show.

Ben Hoberman, president of the Hollywood Radio and Television Society, which sponsors the awards, presented the traditional IBA "Spike" to the two comedy stars.

He said the organization's board of directors had chosen Rowan and Martin largely because their "courage and determination has opened up wide new vistas of television entertainment and restored great vitality and spontaneity to the medium."

Rowan and Martin, after accepting the award, asked to present the sweepstakes trophies to BDO and Young & Rubicam.

Y. & R. and N. W. Ayer each had three trophy winners to top the evening in total category victories.

In addition to the radio series, Y. & R. had the best humorous radio commercial with "First Ski Lesson" for Bristol-Myers' Exedrin, produced by RKO Sound, New York. The Y. & R. television trophy winner was for *Slumlord*, for the New York Urban

Coalition, produced by Horn-Griner, New York, which topped the public service category.

N. W. Ayer had two television winners and one radio titlist. In TV, they won the animation trophy with *Flea-proof Dog* for Sergeant's Sentry Collar, produced by Electra, New York, and the humorous category for *Subway* for Sealtest Foods, produced by EUE/Screen Gems, New York. The radio winner was "This Is Saturday" for American Telephone & Telegraph, produced by Chuck Blore Creative Services, of Hollywood, in the open category.

A Japanese commercial won the coveted honors in the special television category for non-English language entries. The spot, titled *Close Up*, was produced for the Canon Camera Co., of Tokyo, by the Japan Color Movie Co., also of Tokyo.

The "Spike" trophy in this category was presented by Martin Landau and Barbara Bain, stars of the CBS Television-Paramount series "Mission: Impossible."

Douglas S. Cramer, executive vice president in charge of production for Paramount Television, was general chairman of this year's International Broadcasting Awards which drew a record 3315 entries from 39 countries.

A galaxy of other television stars, including many of the "Laugh-In" regulars, presented other IBA trophies.

Trophy winners in other categories were:

Television

Live action, 60 seconds, *Driving School*, American Motors, agency Wells, Rich, Greene, Inc., New York; production, Howard Zieff Productions, New York.

Live action, over 60 seconds, *Anticipating*, Eastman Kodak Co., agency J. Walter Thompson, New York; production, EUE/Screen Gems, New York.

Live action, under 60 seconds, *Athletes*, Standard Milling Co.'s Maypo, agency Lois Holland Callaway, Inc., New York; production, Galfas Productions, New York.

Combination, *Straw Problem Drinker*, Kimberly-Clark Corp.'s Kleenex Towels, agency Foote, Cone & Belding, Chicago; production, Cascade Pictures of California, Hollywood.

Local (one market), *Ronka Ronka*, Chevrolet Dealers Advertising Assoc., agency Harold

Logos-East/West Films Offer Total Services

Logos Teleproductions, Inc., and East-West Films, Inc., have joined forces to offer sponsors a complete production service with full film and video tape capabilities. East/West will do all film production and Logos Teleproductions will do all video tape production for the two companies, according to an announcement made by Rod Erickson, President of East-West, and Ed Griswold, President of Logos.

East-West Films is a film producer whose recent commercial credits include Colgate, Sunoco, Chevrolet, Clairol, Volkswagen. It is a division of Trans National Communications, Inc.

Logos Teleproductions, recently formed by a group of key creative and executive staffers of the former Videotape Center, is New York's newest video tape production company. It is affiliated with Software Systems, Inc.

MCI Video/Film NY Rep For Nat'l Teleproductions

MCI Video/Film Productions Inc., New York, has been appointed exclusive sales representatives in the Greater New York Metropolitan area for National

Teleproductions, Inc., of Indianapolis, Indiana. MCI Video/Film offers production services for videotaping television commercials and industrial productions—and, where desired, "kine" transfers to 16mm and 8mm motion picture film. The company will now also make the two-inch color taping facilities available to advertising agencies and independent industrial and show producers.

Although much television commercial work is anticipated, the company hopes to have considerable bookings for the production of training, selling, introductory, educational, motivational and sales meeting presentations. According to Jack Moss, president of MCI Video/Film Productions, "The quality, speed, economy and multiplicity of visual effects obtainable in videotape—and the ease of transfer to motion picture film—have opened a whole new area for audio-visual communications."

Kodak Adds New Prize to Teen-Age Movie Awards

With the announcement of its seventh annual Teen-Age Movie Awards, Kodak invites young film-makers to start writing scripts, making shooting schedules, recruiting friendly helpers for their entries in the 1969 competition which opens April 15. Entries must be postmarked not later than September, 15.

In addition to the traditional age categories — junior (ages 12 through 15) and senior (ages

16 through 19) — Kodak this year has added a new category called the "One-Reeler," for super 8 and 8mm film-makers only. Both age groups are eligible. July 1, 1969, is the deciding age date for all categories.

The new "One-Reeler" category will test the entrant's ability to edit as he shoots. It must consist of one 50-foot reel of silent super 8 or 8mm film with scenes exposed in their finally intended order, without splicing or post-camera editing. The winning "One-Reeler" films will receive a \$50 award and will be entered automatically in the junior or senior category, according to the age of the film-maker.

Judging of the films will be directed by the University Film Association, which, with the Council on International Nontheatrical Events (CINE), is associated with Kodak in sponsoring the Awards. Prize-winning films from past competitions have been shown in festivals abroad under auspices of CINE.

Rules folders and entry blanks may be obtained by writing Kodak Teen-Age Movie Awards, Eastman Kodak Company, Department 840, 343 State Street, Rochester, New York 14650.

Alabama Textile Group Sees Safety Slidefilm

Atlanta Movie Producer Frank Willard's *Weaving the Fabric of Safety*, an industrial motion picture slide film sponsored by the West Point Pepperell Company, was shown at the recent Alabama Textile Manufacturers' Association meeting in Montgomery. The 18-minute color production illustrates the textile firm's highly successful plant safety pro-

gram by showing an in-plant view of employees at work in two mills. The company's Langdale, Alabama mill was featured because of its impressive safety record. Its employees have worked over two years and five million man hours without suffering a lost-time accident. The company's huge new Lanier Mill is spotlighted in the film's introduction, which includes statements by top management on the importance of safety in every mill in the company.

Dramatic pictures and candid employee/management testimonials graphically illustrate the safety-conscious attitude of the firm's employees, and the wealth of safety equipment in its mills.

Willard, a veteran Atlanta film producer, used high-speed still photography and tape editing techniques to produce the film in just three weeks in order to meet the deadline for showing at the Alabama Textile Manufacturers Association Meeting.

F&B Ceco Gave Light to Politician Conventions

More than 1,300,000 watts of light out of 1600 individual units of flood lights, spot and arc lights, carried by over 160 miles of copper cables — or enough lighting equipment to completely illuminate a small city, were supplied by F&B/Ceco, Incorporated for the TV coverage of the Miami Republican Convention. Being telecast in color for the first time, this huge amount of equipment was trucked from F&B/Ceco's New York lighting rental department in several forty foot trailers.

The F&B/Ceco gear headed for the Democratic National Convention in Chicago immediately after the Miami completion, followed by the lighting of Atlantic City's Convention Hall for the annual color network telecast of the Miss America Pageant.

Rose-Magwood Whodunnit Has Pubs, Props, Cops

Talk about production realism and you'll find Rose-Magwood propmen blushing!

Seems the stage money used in the London production center wouldn't fool anyone . . . least of all a Magistrates' Court prosecutor who dubbed it "a remarkably bad forgery of a £1 note" . . . nor even a London cabbie who recognized it for a dud in

ne dimly lit recesses of his cab.

The story of RMP's fraudulent currency falling into the hands of the bobbies and courts began with the besotted doings of one British bloke, George Robert Lynch. The chap got tanked in London pub one night and while in his cups, went looking for a place to break into. He happened upon Rose-Magwood Productions, Ltd., and hit paydirt . . . a desk drawer full of £1 notes.

With his sizable nest egg stuffed in his pockets, Lynch used himself out of the entry window . . . and hit the first snag in his plans. "I got stuck," he lamented later to the court.

A few wriggling minutes later, he freed himself, shinned down drainpipe and hailed a cab, secretly revelling in his good fortune. The cab driver thought himself less fortunate upon receiving an obvious forgery in payment of the fare and yelled for the bobbies.

Enter the police who uncovered 680 more notes in their search of the now sober Lynch and dragged him off to the cool. His story of finding the notes in an office was not believed until the following day when Fred Fair, managing director of the alleged RMP offices, reported the loss.

Last word on Lynch was that he was still in custody awaiting further proceedings . . . now sadly aware that a mix of pubs and props adds up to cops and locks.

Marilyn Friedel Opens Own Communications Firm

Marilyn L. Friedel, in addition to her services as an audiovisual consultant to many leading companies in the United States, has formed her own communications organization specializing in public relations, sales promotion and marketing. She will operate the company under her own name. Offices are located at 162 East Superior Street, Chicago, Ill.

Miss Friedel has been active over 22 years as a public relations, marketing and sales promotion specialist in the communications field having held top management positions in the broadcast-television-recording-motion picture industry with many years experience in the direct mail and advertising field.

As a Communications Consultant, her services will include marketing, research and development, public relations and sales promotion in the fields of business, industry, education and government in addition to her writing, production/direction assignments in the audiovisual field.

The motion picture industry has discovered a new learning tool — the Panacolor Projector. The unit, a sound magazine motion picture projector, makes its debut in the Selmur Pictures production of "Charly" starring Cliff Robertson (with the projector at the right) in the title role. The picture from Panarama Releasing Corp., premiered in New York.

In the film, Charly — a 30-year-old man with the mind of a 6-year-old — undergoes surgery to correct his retardation. This permits him to absorb learning like a sponge. It is in this context that the Panacolor Projector plays its featured role. It is one of the learning tools Charly uses in making up elementary school in five weeks, high school in three, and the college years in rapid succession. A magazine containing up to two hours of film color can be placed quickly and easily into the unit, and can be run forward, reverse, slow, stop and frame-by-frame motion. Subject selection is made possible because of Panacolor's unique film format, an industry first, which consists of 12 rows of pictures and 12 rows of optical sound horizontally on a 70mm strip of film.

Industry May Need to Modify Traditional Forms of Communication— Cahaney

A WARNING THAT INDUSTRY in the years ahead may need to modify its traditional forms of communication to reach the general public effectively was sounded by G. R. Cahaney, president of Sterling Movies, in a recent speech at the Calvin Workshop in Kansas City, Missouri.

Cahaney's remarks analyzed the effect of the current social unrest in America and were directed particularly at the industrial film field. Sterling Movies is a leading distributor of industry films.

He pointed out that significant changes are occurring constantly in the attitudes of educators, youth and government people at all levels who are caught up in social movements. Many of the negative attitudes are aimed toward the "establishment" in which industry is a foremost target.

"The motives of business are being questioned more than at any time since the early years of this century," he said, "when vast inequities in the distribution of income brought an end to the old social order of Europe and flowed over into this country on the wave of a militant workers' movement which lasted for years."

Cahaney described industry's obvious concern about these matters as "welcome evidence that industry is developing a new awareness of its ability to help resolve" many of our social problems. He added that industry's participation in them is no more important than the need to report them effectively to the public.

"The long-standing practice of communicating with the public through the industry film is therefore," he said, "a more important function and more vital to industry good will than ever before."

To an audience of over 800 industry film sponsors, producers and technicians, he expressed the opinion that the industry film, "in its traditional form, may not be up to the task of communicating effectively with the public in view of the skeptical — if not

hostile — attitudes these people are forming."

He suggested that film sponsors look to television as a source of new ideas and possible formats. Reasoning that the demand on business will be to report rather than to inform — as the industry film has traditionally been geared to do — he affirmed that "television's news and special reports have been the pace-setter in audio-visual reporting, in creating new ways to involve the audience personally, intimately, even compellingly in what it has to say." By contrast, the industrial film has been impersonal, and he traced this to its being, too often, a product of "modest or indifferent public relations objectives." In carrying them out, the industry film over the years has become an "exceptionally fine visual PR vehicle." He questioned whether this was enough.

In noting the need for a "new approach and an idiom more compatible with our time," he suggested that *cinema verite* be further explored for the credibility and audience involvement it offers industry films. The special demands of communications to-

CAHANEY

day require that people "be seen and heard in a real rather than artificial environment spontaneously rather than rehearsed, in confrontation rather than in agreement," he said.

He referred to the recent trend to appoint public affairs officers at the corporate level as a "prudent judgment which may well be influential" in changing the industrial film to a reporting format.

Community Film Workshop Council Receives Special Grant from Elektra Films

A contribution to the Community Film Workshop Council made by Sam Magdoff, president of Elektra Film Productions, initiated a response from other advertising executives attending a screening of films made by these workshops, which were established by the American Film Institute. Hosted by Marvin Rothenberg at MPO, the film execs were addressed by Jack Valenti, president of the Motion Pictures Producers Association; Steve Frankfurt, president of Young & Rubicam; and Cliff Frazier, executive director of the Community Film Workshop Council.

Magdoff's pledge of \$500 worth of equipment, services or cash was meant to serve a twofold purpose. First, he says, it will provide the CFW with film production needs ranging from the nitty-gritty tools like light meters and lenses to post production facilities that include optical work and lab processing. The on-the-spot donation was also intended to evidence Magdoff's support of the program and to establish a precedent for his colleagues. As president of the Film Pro-

ducers Association he has previously been verbal about the danger of "over-insulated business" and has encouraged more involvement in out-of-the-marketplace affairs for his FPA membership.

The Community Film Workshop Council was established not only to support the existing film workshops and to encourage their growth and development, but also to give them the use of a medium in which they can articulate *their* impressions of *their* world.

"Whitey's picture of a black ghetto, no matter how well-intentioned or well-informed Whitey is," commented Magdoff, "can never be as accurate as the black man's point of view. And I also think the American Indian knows more about the American Indian than all the Buffy Sainte-Marie fans put together. Each minority has its own unique cultural characteristics and it takes a lot of so-called soul searching to single them out. These Community Film Workshops are doing it and feel it is not only important, but essential, to be part of the program."

Radiant Corp. Creates Two New Divisions

Cary Wang, president of Radiant Corporation has announced the creation of two new divisions, introduction of a new product line and promotion of several executives.

Effective January 1, 1969, Seymour Jacob, vice president, sales, of Radiant Corporation became president of a newly created division, Radiant Screen and Sales Company. The new company will be responsible for the sale and distribution of projection screens, pre-recorded music cassettes, and related products to camera stores and A/V markets.

Edward T. Klett has been appointed vice president and general manager of Radiant Films and Tapes, Inc., a new subsidiary of Radiant Corporation. Radiant Films and Tapes will develop and distribute educational films and tapes of various configurations, along with related hardware systems, to the A/V market. The primary source of distribution will be through a national network

of franchised A/V dealers.

The addition of Radiant Films and Tapes to the Radiant Corporation group brings the total number of divisions to four — the remaining two being Knowledge Aid and Radiant International.

At staff level, Ed Mielief, Advertising, Sales Promotion and Public Relations Manager, becomes vice president, marketing services of Radiant Corporation.

In making the announcement Cary Wang stated, "Continued growth and progress, the result of the rapid development and acquisition of new products for the photographic industry and audio-visual markets have made these changes necessary."

"With the addition of audio-visual software products and hardware systems to our line of A/V products we expect to attain the same status in this product area as we have in projection screens."

Servis Demonstrates with Film

SERVIS EQUIPMENT COMPANY, a Dallas based firm manufacturing agricultural and industrial implements, knows how to sell. They are entering their 5th year using a successful product film program.

Realizing that the best selling tool in the farm and industrial equipment field is a demonstration, Servis adopted economical 8mm films shown in low-cost Technicolor instant movie projectors. Servis chose the projectors because they are cartridge loading and easy to use. With no reels, threading or rewinding, nearly any Servis employee can set up a demonstration in seconds virtually anywhere.

For their 1,700 dealers across the nation (and others around the world), Servis needed a simple yet effective sales promotion package. Consulting with Bauer Audio Video, Inc., in Dallas, Texas, Servis chose the Technicolor standard 8mm Model 500 projector and a Technicolor C-106 portable carrying case

with a rear projection screen for daylight viewing. Prints of a dozen excellent demonstration films of the Servis equipment in action were prepared and placed in Technicolor Magi-Cartridges. They were ready to sell. And sell they did — one dealer said, without a doubt, the instant movie projector was the most productive and least expensive salesman in his organization! It accounted for thousands of sales dollars with less time spent in cultivating a sale. Saving expensive travel time, pick-up expense, and the use of a demonstrator also increased profit. The dealer never has to worry about what the weather is like outside or even what season it is.

Not only are the projectors ideal for dealer demonstrations, but Servis uses them at company exhibits in farm and industrial shows across the country. As many as four units have been used simultaneously to generate interest and to attract large audiences. •

Color Film Corporation provides all filmstrip laboratory services from master negative preparation through release prints.

Negative analysis and overnight answer prints for producers and in-plant A-V depts. that shoot own negatives. 5251 and 6008 processed daily; negative splicing; A & B printing; dupe negative preparation. Short minimum loop.

All jobs, large and small, given careful, professional attention. Service requirements of out-of-town clients given special consideration.

Established 19 years; filmstrips and quantity 2x2 slides only.

Visitors always welcome; write for prices list.

United Air Lines Offers Updated Film Catalog

A completely revised and up-
dated edition of United Air Lines
Film Library Catalog was recent-
ly unveiled by Jim Kennedy, the
airline's publicity director.

Stock footage on all of the
newest jets—from the twin-en-
gine B-737 to the 198-passenger
Super DC-8—is listed in the new
catalog.

The best jet footage from the
old catalog is included, along
with new scenes photographed
during the past six years under
the direction of the airline's spe-
cial promotions manager, Mary
Stringfellow, and her assistant,
Pat Shorthill.

The jet footage section has
been expanded to occupy nearly
two-thirds of the catalog. The
historic footage section has also
been lengthened by the addition
of propeller aircraft which have
retired since 1963.

United's film library contains
more than 50,000 feet of film,
beginning with the Wright Broth-
ers at Kitty Hawk. Footage in-
cludes inflight scenes, take-offs
and landings, and general airport
activity at major terminals.

The footage is available for
authentic airline sequences re-
quired by motion picture studios,

television production companie
and industrial, educational and
documentary film producers.

United films in 35mm EK, an
provides reduction to 16mm
The footage is provided at a
charge when United is identifi
in the finished film and the ai
line is given the opportunity t
approve script content.

The new catalogs and stoc
footage can be obtained fro
United's publicity managers i
New York, Chicago, Washing
ton, Denver, San Francisco, A
lanta, Detroit, Pittsburgh, Seatt
and Honolulu, or directly fro
the special promotions depar
ment at 626 Wilshire Blvd., L
Angeles, California, 90017, tele
phone 482-3620, area code 215

'69 NAVA Equipment Directory

The 1969 Audio-Visual Equipment Directory has been published by the National Audio-Visual Association (NAVA).

Revised and expanded over earlier versions, the 15th Edition of the Equipment Directory contains new illustrated sections covering TV cameras, magnetic tape duplicators and storage cabinets. Some 1,100 items are listed under 25 general categories of equipment, each with detailed photographs, specifications and prices.

Among the categories featured in the Directory are current models of motion picture, filmstrip, slide, opaque and overhead projection equipment; record players, audio and video tape recorders and playbacks; and learning laboratory equipment. The Directory also lists sources for hundreds of special accessories and devices; useful charts for projection lamps and screen sizes; and manufacturers' trade names.

Price of the Equipment Directory to audio-visual users not commercially engaged in the A-V industry is \$7.00 per copy, or \$6.50 when payment accompanies the order. It is available from the National Audio-Visual Association, Inc., 3150 Spring St., Fairfax, Va. 22030.

*A Name
with a Purpose*

The objectives of Comprehensive Service Corporation are, as the name implies, to render the most comprehensive and satisfying service, with complete understanding of the needs of all who require motion picture equipment, accessories and supplies.

We point with pride to our long list of large and small customers all over the world, who have been coming to us, again and again, over the many years. Our ever expanding business is proof of their confidence in the quality of our products, our dependability and expert knowledge.

Videotape/Film Newsletter

Containing legitimate but very subdued "commercials" for their service, Acme Film & Videotape Laboratories' house organ, *Monitor*, is offered producers, engineers, agencies, sponsors, television stations and educators as a means of reporting interesting and unusual uses of videotape and current activities in the field. Readers of *Business Screen* may be added to the mailing list by indicating their interest in a note addressed to Alene Sharff, Editor, *Monitor*, c/o Acme Film & Videotape Laboratories, 1800 North Highland Avenue, Hollywood, California 90028.

Video Accessories Brochure

A 6-page brochure covering a complete range of accessories for video tape recording and closed circuit television systems is now available from Concord Communications Systems, a division of Concord Electronics Corporation.

Included in the brochure is a photograph and description of a complete range of accessories including remote control devices, special effect control panels, lenses, switchers and many others.

A free copy of the brochure entitled "Video Accessories" may be obtained by writing Concord Communications Systems, 1935 Armacost Avenue, Los Angeles, California 90025.

Here's More to Film-Making Than Making Films!

Some public affairs assignments are downright difficult. Subject matter can be complex and sensitive. The client needs definite results and desires economy. Take the case of "The Little Rivers".

The Water Resources Division of the New York State Department of Conservation needed a pilot project to provide the basis for its developing program of Regional Water Resources Boards. These Boards depend upon public support for their success.

We started out to make a documentary film . . . and ended up performing *twelve* individual functions:

- 1—Producing a 20 minute color documentary film
- 2—Preparing a slide show for more technical material
- 3—Producing three sets of color TV spots
- 4—Co-ordinating a TV special
- 5—Organizing a display
- 6—Rendering maps and visuals
- 7—Creating a monthly newsletter
- 8—Providing press release service
- 9—Black and white still picture coverage
- 10—Shooting color stills
- 11—Film distribution service
- 12—Water resources consultation.

You might call this *total capability*. The payoff will be several years from now when the Erie-Niagara Region around Buffalo begins to develop its system of water resource facilities.

TOOLS, TECHNIQUES AND IDEAS FOR AUDIOVISUAL COMMUNICATIONS

THE CASE FOR ANIMATION

What's playing at the movies tonight?

It could be your company's film.

If it's professionally produced, with an appealing subject matter (sports, travel, entertainment, public service or documentary) and no offensive commercial message, there's a good chance it can be booked into top theatres.

Chances are even better when it's merchandised and distributed by Modern's Theatre Division to specific market areas of your choice.

With only one 35mm print of your film we can get you 50,000 viewers in one year. With more prints, say 100 or so, we can get you up to 7,000,000 a year...through our 30 Film Exchanges.

We'd like to give you a professional appraisal of your film's chances, based on more than 30 years of creative film merchandising. Just send us a 16mm or 35mm print (even a script will do). If you're interested, we'll also review it for bookings in educational and community groups, summer resorts, airport theatres and television.

Dick Rogers, Vice-President of our Theatre Division, (or your local Modern account executive) will give it his personal attention if you contact him at Modern Talking Picture Service, Inc., 1212 Avenue of the Americas, New York, N.Y. 10036.

MODERN TALKING PICTURE SERVICE, INC.

Just Mention Our Name In *CHICAGO*.

We are specialists in the area of supplying motion picture and sound equipment to the professional. Whether it be Rental, Sale, or Service, give us a call. We carry all the leading names in professional equipment.

Equipment for Production, Post-production, and Presentation, is just a start... Write for our free catalog, it will fill you in on all the rest!

studies students for University of Wisconsin

Just as the importance of a solid education has magnified immeasurably in recent years, so have the difficulties in providing ever-increasing amounts of information to ever-increasing numbers of students. Educational television in the classroom has been one solution—but whether it provides a clear, lasting understanding for elementary-school subjects is a question that, for the sake of these young students' future, must be answered without room for doubt.

What better way to explore this question than to film the student's reactions to the educational telecasts themselves. The films could provide any number of experts an intimate, close-up look at the situation, without intruding and interfering in the actual learning process.

But this, in turn, demanded that the cameraman himself make no intrusion . . . the first challenge facing Jim Santulli, cinematographer for WHA-TV, educational station for the University of Wisconsin. As Jim puts it, "kids have an incredible interest in anything new—and present them with the excitement of a movie production in their own classroom and, well, you can guess where they'll focus their attention."

Armed with an Arriflex 16BL equipped for single-system sound recording, Jim added his skills as cameraman to those of psychologist, tutor and diplomat. "We started with a question-and-answer session about the camera. I felt that once the kids were familiar with it, they would accept its presence and pay it no attention." Having implanted this casual attitude, Jim was ready to attempt his next hurdle—to actually shoot the students without distracting them from the lesson.

"I simply began to move around the class during the program, and was able to film individual reactions as I saw them without disturbing the television lesson or the classroom teacher."

Jim credits the camera for much of his success. "The 16BL is completely inaudible just a foot or two away, so I was able to get in really close. Its easy maneuverability and one-man operation really paid off, since I had to be cinematographer, assistant, tripod and dolly all in one. But its convertibility to single-system sound recording is what made the day—I don't know what might have happened if I'd been dragging sync cables all over the place, or if we'd needed another man following me with a sound recorder around his neck. I honestly believe I could not have gotten the sound and picture quality I did with any other camera."

Jim concludes by describing the 16BL as the workhorse of WHA-TV's photo department. Little wonder for, all over the world, cameramen on industrials, commercials and features, as well as educational films, acknowledge Arriflex as being at the head of its class.

Novo Industrial Acquires Comprehensive Filmtreat

Novo Industrial Corporation, parent company of Bonded Services and Audio Productions, has acquired the assets and business of Comprehensive Filmtreat, Inc., New York.

Comprehensive Filmtreat, with facilities in New York and Los Angeles, is the major factor in the field of motion picture film rejuvenation. Through its proprietary processes, the company restores scratched and marred motion picture films to a "like new" condition, thus extending the useful life of prints and negatives.

Modern to Offer Sponsored Films in EVR Format

Business sponsored motion pictures will be among the first programs available in the new CBS Electronic Video Recording System.

Modern Talking Picture Service will transfer selected films to the EVR cartridge format. The company will also adapt educational films, which it markets through its Modern Learning Aids division.

"We see in EVR a new and promising technique for making our products more widely available than ever before," said Carl H. Lenz, president of Modern. He made the announcement at a public demonstration of the EVR system (March 25) presided over by Robert E. Brockway, president of the CBS Electronic Video Recording Division.

Association Films Opens St. Louis TravelCinema

Association Films has opened its fourth TravelCinema sponsored-film theater at Lambert-St. Louis Municipal Airport. Located on the main floor, in the only seating area in the terminal, the showplace is providing air travelers with informational and entertainment films on a continuous basis.

Lambert was selected by Association Films as part of its

TravelCinema expansion program because it is one of the fastest-growing air terminals in the country. The rate of passenger increase is outpacing the nation as a whole, with more than 1.4 million passengers boarding and deplaning each month.

The wood-paneled late-screen TravelCinema is situated in the main passenger concourse where traffic is heaviest. Surveys taken at cinemas in other airports show that free movies are a popular diversion with travelers who have time before or between flights. Many non-passengers—airport sightseers and persons seeing others off—patronize the cinemas as well.

Sponsored films are shown continuously during a 12-hour schedule encompassing peak traffic periods.

Association operates TravelCinemas in Memphis, New Orleans and Tucson air terminals with a fifth showplace scheduled to open in a major terminal this month.

IFPA Revises Competition

The Information Film Producers of America has revised its annual "Cindy" film award competition. See the IFPA Journal section in this issue for complete details.

American Commercials Festival Adds Features for 10th

More than 2,000 advertising and production specialists are expected to be in attendance at the 10th annual American TV Radio Commercials Festival at New York's Lincoln Center March 8, 9 & 12.

The Festival's traditional highlights are the presentations of the Clio awards to the winners of three simultaneous competitions in Television, Radio and International. The winners are selected by jury panels totalling more than 300 advertising executives.

According to Festival Director

ACTRON

Complete Video Services

ACTRON offers every non-broadcast video service or facility that you need—under one roof.

It's the country's *only* one-stop, full service for production, post-production, equipment sales and rentals, consultation and related services.

No matter what the job, ACTRON can do it. Just look at these capabilities.

Production: 3 studio configurations, top quality cameras, lenses, recorders, telecine chain, front projection system, special effects generators, experienced crews. Full location shooting capability.

Post-Production: Editing any non-2" tape, special effects, viewing facilities on-site. Location playbacks anywhere. Complete kine-scope facilities. Quadraplex and helical-scan duplicates. Dubbing of programs and commercials off-the-air.

Services: Full technical and production consultation on any non-broadcast job. Rental of a wide range of equipment for production in black and white or color. Sale of a full range of video equipment. Service contracts for this equipment. Specialized engineering services to construct or adapt systems

and equipment for special jobs. Tape sales, library and forwarding service.

A member of Reeves Broadcasting's Video Division, ACTRON is backed by the resources of the world's largest independent video services facility... ACTRON offers the same quality that makes the name Reeves synonymous with excellence in broadcast television.

Give a call today. Let ACTRON demonstrate how its one-stop, full service concept will open up your production horizons and end your headaches.

ACTRON, A  REEVES VIDEO COMPANY. 565 FIFTH AVENUE, NEW YORK, N.Y. 10017, (212) 687-6586

Planned non-obso

New FR-10 will still be "new" when other makes are obsolete.

Only this system gives you every one of the latest operational features. And packs 'em all into a low-profile, space-saving cabinet that fits flat against the wall — in fewer square feet of floor space than any previous system. And, FR-10 alone is ready now for tomorrow's automated accessories.

FR-10 combines everything you've ever wanted in a magnetic film recording system.

Like dual design, for example. Lets you switch from 16 to 35mm — and back again — in seconds, thanks to RCA's unique plug-in sprocket and head assemblies. Speed and equalization changeover are automatic, with only one interlock system needed.

Like silent, selective head switching — so you can update any section of any track without re-recording the whole reel. And exclusive "Unilogic" motor control system lets you choose between using either manual or automatic control.

Like automatic loop setter. It lets you thread up much faster and more easily. FR-10 rewinds — through the sprocket — at 1000 feet per minute, while handling up to 3000-foot reels. And you get complete metering for each channel, too, with up to six tracks available.

On top of all that, FR-10 delivers reliability even beyond what you've come to take for granted from RCA. Along with matchless sound quality, of course.

For complete information, write: RCA Film Recording, 2700 West Olive Avenue, Burbank, California 91505, or 1133 Avenue of Americas, New York, NY 10036. Cable RADIOFILM. Great Britain: RCA Ltd., Lincoln Way, Windmill Road, Sunbury-on-Thames, Middlesex.

Wallace A. Ross, a record high total of 3,314 entries were received for this year's competitions, including 1,974 in U.S. and Canadian Television, 938 in American Radio and 402 in the International categories.

Among the new features in the three-day program are a radio workshop and tours of sound, film, animation and special effects studios and a video tape production stage.

Greater Miami Film & TV Council Established

The Greater Miami Film and Television Council is being formed as a first step in unifying Florida's film industry.

The Greater Miami Film and Television Council intends to set forth unified goals for the area's film industry. Their stated objective is to encourage a good financial climate offering every inducement to film producers in establishing permanent operations in Florida.

A unified film industry package of proposals will be presented to the State Legislature; the package will include specific goals such as tax reform.

The Council is currently composed of four committees: Steering Committee, Charles Courshon, Miami Beach attorney, chairman; Membership Committee, Harry Walsh, Walsh Enterprises, chairman; Finance Committee, Harry Foster, F & B Ceco Studios, Inc., chairman; and Publicity Committee, Ted Sack, Reela Film Laboratories, Inc., chairman.

The new Council will speak as a single voice in responding to a challenge issued to the State's film executives by Governor Claude R. Kirk in a speech delivered March 28, to the Governor's Industry-wide Motion Picture and Television Conference in Miami. The Governor said, "We want Florida to become a permanent home for the film industry. You can be assured that my office will continue to provide every assistance." But the Governor also said it was the industry's own responsibility to unify so that the State would not waste either time or money on meeting self-serving individual demands.

To assist the film industry, Governor Kirk has established a

special Film Industry Coordinator's position within the Florida Development Commission.

post is held by N. David Flag. "Now, the industry itself must do its part", Kirk said. "Give a package to sell".

In response to that challenge the Greater Miami Film and Television Council will assist the formation of similar councils in every county throughout the State, and lead eventually to formation of a coordinated representative Florida Film Council.

Cahners Publishing Forms A-V Production Division

Cahners Publishing Company has formed a Visual Presentations Division as part of its continuing diversification program with Guy B. Willetts joining the firm as vice president and general manager of the new unit. Cahners, is thus extending its industry information activities into the field of audio-visual services.

Willetts, a veteran filmmaker, will direct the production of motion pictures, sound slidefilms and graphics, plus sales and management meetings and industry shows. He comes to Cahners from the managership of the audio-visual department of Korbaw Associates, Detroit producer of industrial films. He worked previously with the Wilding Division of Bell & Howell as manager of TV productions in Michigan.

Camera Mart Lighting to Expanded New York Site

The Camera Mart, Inc., has opened new headquarters for its Lighting and Grip Division at 887 Ninth Ave. in New York City.

The opening is another step in the expansion of The Camera Mart and related companies and offers clients faster service in the handling and delivery of equipment, according to Samuel H. Egan, president.

Available for sale, rental or lease at the new location is a complete line of lighting and grip equipment as well as dollies and fog and wind machines.

Richard Ordway has been named manager of the new facility.

Arkansas Power & Light Co. sees the power and the light of Da-Lite® Senior Electrol® slide & movie screen.

When the Little Rock based Arkansas Power & Light Co. need a big, powerful and brilliant automatic screen for their new Conway Office-Service Center, they selected Da-Lite's famous Senior Electrol.

Electrically operated Da-Lite screens (there are 4 models in all) are all designed for easy installation on wall, ceiling or within ceiling. Sizes

range from 50" x 50" thru 20' x 20'. The screen above was purchased from Mitchell Bowie School Equipment in Little Rock.

Write Dept. BS for full information and the name of a Da-Lite Audio-Visual specialist near you.

Westermann to Visualscope Vice President-Marketing

Ted Westerman has joined Visualscope, Inc. as vice president marketing continuing his career in the field of communications for business. Formerly vice president of Jam Handy Productions, Westermann is considered a pioneer in the industry.

Geismar New President of Reeves, Others Named

J. Drayton Hastie has resigned as president and director of Reeves Broadcasting Corporation and will continue to be associated with the corporation in specialized areas.

Newly elected president and a director of Reeves is Richard L. Geismar, with full operating responsibility for Reeves and its subsidiary companies.

Geismar was most recently a vice president and director of Metromedia, Inc., being associated with them and their predecessors in the broadcasting and communications industry for 21 years.

Bruce Lang has been named to assist Geismar in all phases of the corporation's activities.

The newly formed Broadcasting/CATV Division of Reeves Broadcasting will be headed by Fred E. Walker.

Walker comes to Reeves from Avco Broadcasting Corporation where he served as general manager and vice president.

Alan L. Emlen has been named vice president-corporate relations of Reeves and will continue to serve as vice chairman of Previews, Inc., the international real-estate marketing subsidiary of the service company.

Four Named in B&H Executive Changes

Frank J. Hobaek, director of marketing for the Audio-Visual Products Division of Bell & Howell Company, has been promoted

to general manager for the division.

William R. Montgomery, manager of Language Master educational systems, assumes additional responsibility as assistant to the general manager in charge of product and business planning.

Roger W. Coomer, former director of sales, succeeds Hobaek as director of marketing.

Richard L. Allen, regional manager in the eastern U.S., is being brought into the home office as director of sales to succeed Coomer.

Harwald Names Short to Head National Sales

In his new position as National Sales Manager, Ray L. Short, Jr. will be responsible for marketing and for directing all sales programs. Short has most recently served as Western Division Manager and has been with the Harwald Company for ten years.

Roederer, Hagan Named in King Screen Promotions

King Screen Productions, Seattle based film firm, has appointed Bernard Roederer general manager, succeeding Roger Hagan, now corporation creative director for the King Broadcasting Company.

Lalley Resigns at Modern, Forms Production Firm

John B. (Jack) Lalley has resigned from his position as Washington, D.C. vice president of Modern Talking Picture Service, Inc., to form a film counseling and production firm to serve trade associations, business and agencies.

In addition to his consulting service, Lalley will produce and market strip film series in the field of education, using much of the material currently available through Federal Government research, with headquarters remaining in Washington.

Duncan Names O'Malley Executive Vice President

Martin O'Malley, formerly eastern manager for Audiscan, Bellevue, Washington, manufacturer of audiovisual presentation equipment, has been named executive vice president of James E. Duncan, Inc., Rochester, N.Y. audiovisual and publishing firm. He will make his headquarters in New York City.

Newly Created Berkey Position to Lofquist

Berkey Photo, Inc. has named A. P. Lofquist, Jr. to the new post of Director of Technical and Quality Control to be responsible for all technical and quality aspects of the photographic organization. These include Berkey Pathe in Hollywood and New York and Amateur Film Processing facilities in seven major cities.

Well-known for contributions to the motion picture industry, Lofquist was associated with Technicolor for 23 years.

R. I. Brown to VP for Menell Associates, Inc.

Menell Associates, Inc., designers of audio/visual communications systems for industry, education and the military, has appointed Raymond I. Brown vice president. His responsibilities will include marketing, project control and administration.

Brown was previously a production sales manager with FMC Corporation after serving two years in the U.S. Army.

Around the Industry . . .

Robert E. Dressler, former director of the Ampex Video Institute, has been named director of communications for the educational and industrial productions division of Ampex Corporation, including responsibility

for Ampex Video Institute, Ampex Tape Exchange, advertising and sales promotion and industry relations . . . Reela Film Lab. in Miami has Richard Blum as assistant general manager . . . Centron appointed J. E. Baster assistant director of sales, after 18 years with Calvin Productions . . . Ralph Wilms Chubb has joined Patterson & Hall as a photographer and assistant producer at The Im Works, a division of Patterson & Hall . . . Kalart appointed James C. Tohill to the position of mid-western regional sales manager . . . Eric Camiel and Dino Ptopoulis, directors, have joined Pelican Films, Inc. . . . Dr. Arthur K. Engelmann has been appointed dean of Rochester Institute of Technology's College of Graphic Arts and Photography, which will also include director of the Graphic Arts Research Center . . . Grafex's new field sales manager, audiovisual products in the New York State and New England area is Elmer Manspeaker . . . John L. Poe has joined Grafex as business manager for the audiovisual systems and product services department . . . James R. Young has been named treasurer of Ingelics . . . Jerrold T. Sundt and Alfredo T. Martinez have been named in changes at Bell & Howell; Sundt has been named director of B&H's School of Institutional Technology and Martinez goes to a newly-created district manager position for audio products . . . Sony has appointed Harry B. Proudman eastern regional video recording product sales manager . . . John P. Catin brings 30 years' experience to his new position as sales manager for Guffanti Film Laboratories in New York City . . . Kalvar Corporation's new sales position — director of planning — goes to Thomas G. Doty, who will also serve as secretary of the corporation's newly-formed Growth Committee.

GOOF-PROOF SOUND FOR SLIDES

Here's one sound-slide system that *doesn't* require a training program of its own. Pro-Gramo®. The original single-system, tape-actuated sound programmer for Kodak Carousel Projectors. Totally goof-proof synchronization of slides with music, narration, and sound effects — anywhere, anytime.

No training director ever had a better assistant. Pro-Gramo delivers professional presentations, leaving you free to answer questions, etc. Operation so simple that trainees can re-play the show themselves.

Here's how it works: You record the sound, using almost any tape recorder, and load the tape — up to a one hour show — into a standard cartridge. Record the slide-advancing pulses, and your show is ready. You can run it again and again, or you can reprogram it for individual audiences.

The Pro-Gramo attaches to the Kodak Carousel to form one handy, portable single unit — detach it in seconds to use the projector alone. Models available for other slide and filmstrip projectors, too.

Pro-Gramo is the *original* unit of its kind. The only one with instant-repair plug-in electronic modules. They're sealed against dirt, shock and vibration; and the space-age hi-fi poly-planar speaker is another Pro-Gramo exclusive.

Other components of the Pro-Gramo total A-V system include: ROBOT-Automatic rear-screen projection theater; a two-projector dissolve unit; extension speakers; remote control sound; built-in cueing system for at-will slide signal change, and a built-in PA system.

Pro-Gramo can add an exciting new dimension to your next training presentation. Suggested retail price is less than \$255 without projector. Write for our brochure "Make Slides Speak for Themselves," and for the name of the Pro-Gramo dealer nearest to you.

THE MEETING of this year to date has to be that dramatic, live closed-circuit television conference "Challenge from the Nixon Administration" which was seen and heard (in color) by more than 20,000 business and civic leaders in 26 cities all over the U.S. on Wednesday morning, March 26th.

Management Television Systems, Inc., the organization which handled this historic teleconference, cites a cost of "less than \$9.00 per person" for carrying big-screen video from the White House and its studios, plus a simultaneous two-way audio hookup between Washington, D.C. and the 26 participating cities.

The MTS 360 System used on this program is literally a "control room within a cabinet" and delivers a full color TV picture (live or tape) up to 30-foot screen width. The System also contains all equipment necessary for multi-media presentation of slides, film, etc. There are presently 40 cities in the MTS Network.

Overseas Film Festivals & Conferences

Highlight the Calendar for May and June

Mark your overseas events calendar for several important dates. The Triennial International Labour & Industrial Film meeting, the first following the event in which we participated at Montreal during EXPO, will be held in Antwerp, Belgium from May 23 to June 3. If you're interested in attending, write the Secretariat at Lamoriniestraat 236 in that Belgian metropolis.

And on June 17-19th, the British Industrial Film Festival, hosted by the British Industrial & Scientific Film Association in cooperation with the Confederation of British Industry, will take place in Brighton, England. Extra events will include seminars, specialized discussion sessions and non-competitive screenings of applied films and an equipment exhibition. Tony Durant, Director of BISFA, tells us that a symposium on film and industrial relations is an important program event. Its purpose is to show the use of film in putting over new productivity agreements, management problems, policy changes and the development of improved corporate attitudes. We're helping arrange for U.S. films to be shown at that event and hope to attend.

Tying in to your possible visit to the British Industrial Film Festival, you can stay over for The International Technology Conference & Exhibition, hosted by the British Kinematograph Sound & Television Society, at the Royal Lancaster Hotel in London on June 23-27. Members of the SMPTE in the U.S. are arranging to take part in special group rate flights.

Finally, there's word that the 10th Inter-

By O. H. COELLN

national Industrial Film Festival, the world's No. 1 exhibition of business and industrial motion pictures, will be held again this time in West Germany. We'll keep you informed as the program develops. The Confederation of European Industrial Federations, headed by M. Rene Arnaud, its Secretary-General in Paris, is the sponsor of this important competition. U.S. entries are cleared through our own National Association of Manufacturers via a special screening activity set up by the Council on International Nontheatrical Events (CINE) in New York and Washington.

Another Harbrace Publication Promotes Audiovisuals With a Three-Page Feature

Evidence of the great power inherent in our 55-publication family of Harbrace magazines, of which BUSINESS SCREEN is part, the first feature article on "Audio-Visuals for You" (addressed to hosiery manufacturers) appeared in HOSIERY AND UNDERWEAR in April, 1969. We're at work on a "Sight/Sound in Your Business" column for a sizeable number of Harbrace Publications. The total readership goal, benefiting the entire audiovisual industry, is 550,000 executive readers of specializing vertical industry publications.

Jack Lieb Film for Chicago Mercantile Exchange Featured in "Journal" Article

Speaking of publications, did you see the WALL STREET JOURNAL story on the Chicago Mercantile Exchange. A significant paragraph credits a fast-paced 22-minute motion picture produced by Jack Lieb Productions (Chicago) with an important contribution toward creating interest of potential traders. The film has already won two awards and is being widely shown to brokerage firms and to business and civic groups. Good stuff!

American Science Film Association Hosts Washington, D.C. Conference Sept. 17-19

Interested in science films? Such subjects as "New Applications of Film for Scientific Research" and "Film and Television for Public Information on the Sciences" will be on the agenda for the Fall 1969 Conference & Science Film Exposition of the American Science Film Association. It will be held September 17-19 at The Shoreham Hotel in Washington, D.C. Contact the ASFA office at 7720 Wisconsin Avenue, Bethesda, Maryland 20014 if you are interested in submitting new science films for showing.

Growing Use of Animation

"THE TOTAL NUMBER of animated commercials produced in the past year is so is more than double the number produced in the preceding years," stated Joseph Dunford, president of Pelican Films, Inc., in an address to the Advertising Club of New York on March 14th, 1969.

Entitled, "How In the World Do you Animate the Mona Lisa?", the speech discussed both animation and live action,

DUNFORD

particular emphasis on the relationship between the advertising agency and the animation production house. He stated that agencies creative teams not familiar with animation will have to master the schedule and mechanical problems peculiar to animation, significantly different from live action production.

Dunford showed a series of new, award-winning TV commercials to illustrate the present surge of animation. He observed: "Animation's future will be moving in a number of directions at once. Back to Bambi and Jerry the mouse and Jerry the mouse and Jerry. That would be a kooky thing for a generation that knows them well from the screen runs on TV. Other directions have been influenced by motion pictures, such as 'The Yellow Submarine' and 'The Charge of the Light Brigade.' The more directions, the better..."

"The studios reaction to these new creations are mostly happy", he surveyed, "the only problems are in introducing and explaining the role of the animator."

Industry types are now using animation that never or seldom did before—automobiles, Rent-a-Cars, airlines, banks, insurance companies. And, of course, there is the animated corporate logo, a natural development of the increasing role of the TV commercial in the total context of advertising.

Dunford ended his speech by observing: "The only guide is the creative depth of the medium, and animation has a limitless creative horizon. We'll be seeing animation in an infinite variety of styles and forms as long as the TV commercial exists."

FEATURE-FILLED
MIXER / REMOTE
AMPLIFIER
HAS AN
UNEXPECTED*
PRICE TAG**

*Unexpected? Judge for yourself: the Shure M67 Professional Mixer/Remote Amplifier has virtually every important feature asked for by broadcasting and recording studios and sound installers. It can be used as a complete, compact console for studio, remote, or original installation use—or as an "add-on" mixer for expanding existing facilities and providing additional microphone inputs with tape recorders and VTR's.

It features 600 ohm line and microphone level outputs; an illuminated VU meter calibrated for +4 and +10 dbm; four low impedance microphone inputs, each with individual low-frequency filter inputs—plus one input convertible for line bridging, or 600 ohms; built-in tone oscillator to provide calibration signal to set signal levels; extremely low noise

and RF susceptibility (noise level -126dbv); female Cannon connectors, two-level headphone monitor jack and many other features.

Its distortion level is UNDER 1% from 20 to 20k Hz at +10 dbm out! Clipping level is +18 dbm. It also features a unique *noiseless* automatic switchover to battery if the AC line fails. (Battery pack optional.)

It is not much larger than two cartons of cigarettes (11 $\frac{3}{8}$ " x 7 $\frac{1}{2}$ " x 2 $\frac{1}{2}$ ") and weighs just 4 lbs. 4 oz.

Incredibly, this truly professional, compact, complete mixer/remote amplifier has a professional net price of only \$147.00!

OTHER SHURE PROFESSIONAL MICROPHONES... FOR SUPERIOR AUDIO

**MODEL SM5
CARDIOID BOOM DYNAMIC**

Because its cardioid directional pattern is uniquely uniform with frequency and symmetrical about its axis, the SM5 is singularly independent of the effects of environment. Even in extreme shooting situations (such as with tight sets, low ceilings, hard walls, low microphone angles, traffic or air-conditioner noise and rumble and changing distance) the SM5 minimizes sound coloration and ambient noise pickup.

**MODEL SM76
3/4" OMNIDIRECTIONAL
DYNAMIC**

Ideal for interviews and audience participation, yet unusually smooth wide range response (40-20 KC) for critical music reproduction. Instantly detachable from stand. Steel case with Cannon connector.

**MODEL SM50
OMNIDIRECTIONAL
DYNAMIC**

Self-windscreened and pop-free for news, sports, remotes, and interviews. Also ideal for many studio and control room applications. Comfortably balanced for hand or stand use. Natural response.

Get a Graflex 16.

Before you put your money on one of those automatic loading projectors, consider!

You may spend a few more seconds loading our Graflex 16, but it won't cut, chop, or tear your film to ribbons . . . the way those "lightning" loaders are all too apt to do.

You want to show films in a bright room one day, a dark room another? With an automatic loading projector, you'd need to change bulbs. With the Graflex 16, you push a button. Our two-stage brightness control gives you the light intensity of your choice . . . equivalent to 750 to 1000 watts.

How about that old print? The one that's worn and ragged and has lots of splices in it? The competitive projectors run roughshod over it. Our Graflex

16 goes easy . . . adjusting automatically to the film's thickness so as not to hurt the film or interrupt your showing.

More? You want quiet operation? We offer a silencer. Hate over-heating? We have a special cooling mechanism. Wonder about lens quality? Remember, we're Graflex, now part of the Singer Company, and have been making the world's finest optical systems for still cameras since before you were born.

Don't succumb to the easy lure of automatic loading until you compare all the features of the Graflex 16. Ask your Graflex dealer for a demonstration.

A Graflex 16 projector didn't just happen. We made it that way.

SINGER
GRAFLEX, INC.

"The New Adventures of Huckleberry Finn," seen on NBC-TV, Sunday evenings, is an example of the advanced technology of combining animation with live action.

Animation is assisting in communicating the new learning with films such as 'A' IS FOR ASTRO-NAUT, which the company recently produced for the publishing firm of Harper & Row.

THE CASE FOR ANIMATION

William Hanna (left) discusses storyboard (displayed behind on wall) with Ross Sutherland, director of industrial film division, and Joseph Barbera.

SEVERAL YEARS AGO following the success of "The Flintstones," audio-visual executives from many major corporations often visited Hanna-Barbera Studios to explore how animation might effectively be used to communicate with their employees and potential clients.

These conferences and discussions always turned my thoughts to World War II when we produced training films for the armed forces. We had demonstrated that animation as an effective communication tool in addition to its obvious entertainment values.

After a particularly lengthy meeting one warm August afternoon with a group of audio-visual executives, we decided our organization could possibly make a meaningful contribution to the rapidly-developing field of management communications.

To be effective in this competitive area, six years ago we established an industrial film division. This division devotes its efforts wholly to the creation and development of industrial and educational visual aids.

As we began to establish relationships with major corporations, it soon became evident that many executives were reluctant to consider animated audio-visual films for a variety of reasons. Most of these reasons, in our opinion, were not valid.

The most difficult obstacle which we encountered was the general assumption that animation was too expensive.

This is not true.

For example, TV commercials represent the most expensive minutes airing on the TV networks. Our cost for producing a 60-second TV commercial may range from \$14,000 to \$16,000. A 60-second live-action commercial will cost at least 25 percent more to produce. Certain live commercials may cost in excess of \$100,000 for a single minute.

Also, a message can often be communicated with animation in half the time it would take with live action.

There was once a cost factor associated with animation. That factor has disappeared.

New techniques, among other production considerations, are contributing to cost reduction for animation. An example would be the Xerox system to transfer the image of animation's drawings onto celluloid. (This phase is known as "inking" and is the slowest and most tedious step in cartoon production. Trained technicians called inkers cover each animator's drawing with a clear sheet of celluloid (termed a cel), then trace the drawing onto the cel.

The standard cel Xerox system is practical for small animation studios, but for a large-volume operation such as Hanna-Barbera, where TV series, commercials and industrial films are part of the daily product, the existing Xerox device is too slow.

Therefore, we constructed a more practical working system. Realized were a 50 percent production savings for the inking phase and an output increase for TV series amounting to four times what it had been in past seasons. We are able to pass this savings along to our clients.

With animation, there are no variable factors that could slow production or increase

Continued on page 22

How long will the action wait while you change magazines?

A minute? Ten seconds? It depends, of course; but ten seconds is all you'll lose while changing the NPR's magazine. That's including five seconds for checking the gate. And that's two or three *minutes* less than you lose with every other silent running camera on the market.

Snap off the old magazine, inspect the aperture, snap on the new magazine. That's all. You don't need to touch the film. The film is threaded and the loop is formed inside the magazine when you load it, before shooting starts. The rear pressure-plate is on the magazine; the aperture is on the camera body. When you snap off the magazine, there's the aperture, right before your eyes. Couldn't be easier to clean.

With unscripted action that won't wait, you can leave the tape recorder running when you run out of film, and cover the lost five seconds with a cutaway later. The NPR's built-in clapper and sync pulse will automatically re-establish sync. In the studio with a script, the five-second magazine change can prevent everyone on set going off to make a phone call when they hear the dread cry: "Reload." With the NPR, it's just another take. Immediately.

The NPR's rotating two-lens turret, its precise reflex viewing, light weight, registration-pin movement, balanced shoulder-resting, and, of course, its blimp-free silence — they all make life easier, too. May we send you our NPR brochure?

case for animation . . .

continued

cost such as actors, props, sets, locations or weather.

Moreover, the sets, backgrounds, appearances of actors and many other visual considerations are not dated. In the majority of cases, the effective lifetime of an animated film is substantially longer than a live-action film.

A study of films some years ago showed that of the 20 most-used industrial films, only eight were live action; the other 12 were animated.

Advertising agency art directors and copy writers are realizing the limitless potential of animated commercials. There is a definite creative boom existing today within the agencies for animation.

Commercials represent the most advanced use of animation as a tool of mass communication. One point to make and minute to achieve it.

Sponsors who use the animated commercial are selling their product as well as giving the viewing public some of the most enjoyable minutes on TV.

The message does not necessarily have to be funny to call for animation. Indeed, many industrial films are illustrative in nature.

The box office popularity of "The Yellow Submarine," has shown there is even room for animated surrealism.

Within the next five years, 50 percent of the filmed product of Hanna-Barbera will be intended for release to industry, business and education.

We base this prediction on the impending knowledge explosion which will burst on us during the 1970s.

We understand that Marshall McLuhan already is saying that the entire textbook industry is a "branch of hardware" desperately in need of redesigning since the advent of television. He feels that TV has developed new learning difficulties in the classroom. And that the TV child now has visual habits utterly unsuited to reading the conventional printed page.

Of course, we realize that the printed page is not a disappearing medium, but it is going

to have to be supplemented, especially where the new learning is concerned.

Animation, or industrial graphics as it may someday be termed, is one of the most formidable educational tools available to instructors or supervisors who must effectively communicate large amounts of facts to mass audiences in the shortest possible time.

Subjects as abstract as mathematics, as difficult to photograph in live action as surgical methods or nuclear experiments, cry for illustration with animation.

The communication of emerging technology in fields of science, industry and education can be most effectively achieved with animation. Animation has been assisting in these areas for years, but its role will soon increase.

Colleges and universities are already introducing courses and symposiums in animation within their cinema arts departments to instruct and prepare students for careers in the industry.

Recently, Dr. Roy Madsen, executive director of film, San Diego State College, interviewed me during the research of his soon-to-be published "Animated Film: Concepts, Methods & Uses." He told me "animation's greatest potential rests within the frame of the future information explosion."

Dr. Madsen observes that "many, if not most, of the new concepts being developed today transcend the capacity of live action cinematography and require animation."

He predicts within 20 years, educational technology will have developed libraries of visualized concepts that will be checked out like books for study by students. Many of these concepts will be stated only in animated film form.

Dr. Madsen adds there will also be a very large role for a new breed of animator-scientist. This technician will work in the fields of medicine, chemistry, oceanography, meteorology and in every area in which ideas in motion must be stated.

What is the magic of animation which allows it such limitless potential?

Possibly the answer is that animation creates a unique situation where an audience can focus on a specific subject without the distraction of conflicting elements.

For example, if we were asked to demonstrate for non-medical personnel in "live action" what happens when a bone fractures, we would have to make an incision in a leg or an arm before reaching the fracture.

We would not even be near the chips of bone and splinted edges before most of the audience would be so distracted by the sight of the exposed tissue and blood that many would tune out or maybe become ill.

But with animation, we could effectively focus on the fracture, explaining exactly what occurs when a bone of the body is broken. We could even continue to explain what happens as the bone begins to mend. In minutes, we could trace the knitting of the fracture through a six-month period.

Similarly, an animated sales film can present an exact idea without concern for distractions created by actors or surrounding

The use of color (we currently have 40 hues to color productions) is also a focus for consideration. An element can be highlighted with color for greater attention, while other elements can be completely subdued.

An animated film suggests unique personality. The word "animate" defined means to bring to life.

Animation is total creativity because everything about it comes directly from the imagination.

Because of this, animation simplifies the complex. It uncovers the actions of the minute by enlarging them to recognizable picture proportions. It reduces the mammoth to easily-viewed proportions.

Using these devices, our industrial film division assisted many of our clients to communicate complex information which would otherwise be impossible to create with live action.

A good illustration of the educational and message impact of animation was recently demonstrated with *The Incredible Voyage of Mark O'Gulliver*, a 25-minute film we produced for the United States Chamber of Commerce.

The USCC sought to educate the public on the dangers of overzealous government regulation. To gain any recognition, the Chamber realized the film would have to be presented in a good-humored way.

Hanna-Barbera production executive Art Scott, a 31-year veteran of the industry and a graduate of the Walt Disney school of animation where he worked on many of the wartime animated instruction films, wrote script about a U.S. Congressman shipwrecked on an island inhabited by animals who think and talk.

The film was greeted with a high-degree of enthusiasm wherever it was screened. After the premiere, Carl H. Madden, chief economist of the Chamber of Commerce, speaking before the Industrial Audio-Visual Association in Kansas City on the need for economic education, said in part:

"Hanna-Barbera has the swift grasp of the creatively talented. It combines this with great facility for tasteful high-jinks and light touches that, though unobtrusive for adults, probably furnish the major interest along with narrative itself, for the less sophisticated."

The film also received the Freedoms Foundation Award.

Last year, we held meetings with several local educators who, similarly to audio-visual executives of six years ago, wanted to explore animation as a classroom technique. We soon consulted with several top publishing firms and were delighted with their interest in our product.

This past March we produced a series of training films for the publishing firm of Harper & Row. The State of California has adopted the Harper & Row Basic Reading Program for elementary grades one through six, beginning in September of this year. Our task was to produce the audio-visual film

William Hanna (center) discusses background arrangements with two background painters during production of an industrial film.

at would train the elementary school teach-
the reading program's applications.
Working closely with the Harper & Row
executives, such as Jack Witmer, marketing
ce president, and Robert Jachino, market-
g services coordinator, we produced 'A' Is
r Astronaut.

This 25-minute, fully animated film, out-
ted the reading program, emphasizing that
esterday 'A' was for apple . . . but today,
' is for astronaut. The film explained that
day's children are exposed to more facts
rough books, magazines, radio and televi-
on. Because of this situation, modern read-
g programs must be instituted in elemen-
ry schools.

After the introduction, the film continued
explain the entire reading program, using
the devices of animation.

Following premieres in Los Angeles and
n Francisco, Witmer stated that reaction
om his clients (Board of Education and key
alifornia educators) was that 'A' IS FOR
STRONAUT was the greatest training film
at they had ever seen.

An example of animation functioning with-
the theoretical, or within a situation where
e-action is totally impossible, was demon-
trated with a film we produced for The
eing Company.

The film was to be incorporated into Boe-
g's Super Sonic Transport (SST) overall
oposal for U.S. Government. Our task was
create on the film, through animation, the
alism of an 1,800 mph flight of the SST.

Titled *Wings of Tomorrow*, the cartoon
eatment enabled Boeing to demonstrate an
ronautical situation that will occur in the
rly 1970s when the SST hopefully will be
ady for flight.

These are a few of the examples of what
imation can accomplish as a communica-
on tool.

For those who would enjoy viewing the
any new vistas of animation, we would
commend a visit to the International Tour-
ce of Animation, supervised by Herb Ko-
wer, director of animation department,
niversity of Southern California.

The Tournee of Animation is a traveling
hibition of outstanding shorts from nations
ound the world. It allows the public a
chance to view the latest in animation.

The International Tournee debuts each
ear at the Los Angeles County Museum of
rt under the title of International Animated
ilm Exhibit. Following the show, the films
e sent on tour throughout the U.S.A. for
ne year.

The program has drawn sellout crowds in
ities and on campus. It is demonstrating that
imation does sell.

People are learning through commercials,
aining films and exhibits that animation is
ore than a world of little cartoon characters
unning around on Saturday morning TV or
gotypes coming to life.

Animation is a big, wide world of oppor-
nity. It is fantasy of moving graphics tell-
g a story, communicating a message or
aking the cinematic impossible a colorful
nd lively filmed reality.

For fresh, effective, visual communications,
his year consider animation. •

Joseph Barbera (right) reviews storyboard with Alex Lovy, animation director, during production of an animated film.

Xerography is assisting in the production of animation films. This scene shows working technicians and a portion of the custom-designed, assembly-line operation for transferring animator's drawings to cels via the Xerox system.

Building Better Anti-Submarine Warfare Crews

Series of Navy training films has greatly improved the confidence and comprehension of Helicopter squadrons charged with the responsibility of anti-submarine warfare.

THE BENDIX CORPORATION and the United States Navy have recently cooperated in the development of an educational package designed to instruct the officers and crew of ASW helicopter squadrons. Motion pictures play an integral part of the program which consists of four training films totalling over one hundred minutes of screen time. The films are now being shown around the world to the airborne sonar crews who operate the submarine finding dipping sonar from Sikorsky helicopters while hovering about fifty feet above the ocean surface. The airborne sonar equipment known as AN/AQS-13, is manufactured by the Electrodynamics Division of the Bendix Corporation, North Hollywood, California.

Helicopter squadron doctrine dictates the operational and maintenance procedures required to keep the electronics device in an "up" or "go" status. Unfortunately, each of the squadrons had expected different performance values. The Navy, concerned over the inconsistency, contracted with the manufacturer for the development of an educational package which standardized procedures and performance levels.

Under the guiding hands of Jim Dear and Al Messenie of the Bendix Performance Improvement Program group, a training program was conceived that would set the true guidelines for all of the squadrons to follow.

In addition to engineering studies and procedural manuals, Bendix suggested the production of four 16mm motion pictures, each covering a specific area. The films are titled *Preflight Procedures*, *Search and Tracking Procedures*, *Operational Dip Check Procedures* and *Organizational Maintenance Procedures*. Each film covers the correct procedures to follow for maximum performance under that particular mode of operation.

The Navy, realizing the critical importance of the program, permitted Bendix to create and execute the films, as well as all collateral printed materials, in order to expedite the plan. The Performance Improvement Program (PIP) group from Bendix are also carrying the program to the fleet. Bendix representatives are in Europe, aboard ASW carriers, and at the Naval Helicopter Air Stations at Key West, Quonset Point and Imperial Beach, California.

To produce the films, Bendix selected the

firm of Richard J. Soltys Productions, Burbank, California. The assignment: produce four, half-hour film shows and a quantity of release prints to be delivered in ninety days, an almost insurmountable task.

NAS Imperial Beach, the Naval Helicopter Capitol of the World, was the site of the principal photography under the direction of cameraman Jack Johnston and gaffer Lee Thomas. The majority of the photography took place inside the confined space of the Sikorsky helicopter with very little extra space for crew and virtually none for lighting. To accomplish the job, Mole-Richardson quartz lights were selected with emphasis on the Nooklite fastened with alligator grips. This permitted the lights to be suspended from every conceivable corner or metal bracing.

One of the more fascinating aspects to the photography was acquiring the underwater images displayed on the cathode ray tube. The main photography was shot on EK 7255 but a much higher speed was required to film the CRT scenes. Due to the extremely low CRT intensity level required for normal interpretation, Eastman Kodak EF 7241, high speed ektachrome was exposed wide open (f1.9) and then force processed to an EI of 320. "With normal photography, grain would have been a problem with the emulsion being forced," commented Johnston, "but due to the monochromatic image displayed on the CRT, it was not even noticeable."

A Navy spokesman said that the CRT photography was some of the best ever provided to the Navy in that it faithfully reproduced the extremely subtle light values of the underwater noise and underwater objects that only the trained observer can differentiate.

Lt. Commander Gil McConnell of Helicopter Squadron Ten (HS10) at Imperial Beach, commented that the training program has been the most successful of any program yet devised for airborne sonar operations and that the crews' response has been enthusiastic in its praise. "Knowledge in the system and confidence in their comprehension of the device, has raised the level of performance of all of the airborne sonar crews," noted McConnell. "The films, specifically, are one of the best aids yet created to communicate the entire concept of ASW airborne sonar to the men who will operate the equipment. They will be useful tools for many years to come."

Sikorsky ASW training helicopter (above) enroute to dipping area, and training submarine (below) being deployed in conjunction with filming of AN AQS-13 training films.

Working in the confining quarters of the Sikorsky helicopter, cameraman Jack Johnston lines up scene.

Producer Dick Soltys served as second cameraman for air to air photography off the California coast. A Tyler camera mount was used with Mitchell camera for the majority of the air scene.

How would prestriped film from Kodak sound to you?

Terrific!

In fact, everything about Kodak's prestriped film is terrific. Take the sound quality. The high sensitivity of the magnetic stripe lets you record clean, undistorted signals—even under adverse conditions. And its high signal-to-noise ratio means there will be very little unwanted systems noise. Then there's the precision positioning of the stripe for optimum head contact. The result? High-quality sound to match that high-quality image.

If you want to show magnetic sound films to your—and their—best advantage, try the KODAK PAGEANT Sound Projector, Model AV-105-M. It's half projector, half tape recorder. With it you can add or erase

sound, update older films, or insert new commentary. Of course, the AV-105-M can instantly play back the sounds you've recorded. (It also plays back optical sound.) It's a handy tool for any in-plant or news department.

If you like the sound of this prestriped film story, contact your Kodak representative, or write the nearest Kodak office listed below for more information. You'll like the sound of the film even better.

Awaiting introduction as festival chairman J. W. Anderson opens ceremonies is Jerry Curto (seated), president of the Chicago Film Council which participated in the festival as a regular meeting.

The special Business Screen award was presented to United Air Lines' John Grember by Lon Gregory (right).

Receiving the "Gold Camera" for the Republic of South Africa is Ambassador H.L.T. Taswell (right) from festival chairman J. W. (Wil) Anderson.

U.S. Industrial Film Festival Names Gold Camera Winners

MORE THAN 200 persons from throughout the nation were on hand at Chicago's Palmer House Hotel April 24 as the U.S. Industrial Film Festival took on an international flavor at the second annual "Gold Camera" awards presentation ceremonies.

Among the winning industrial films were entries from Australia, the Republic of South Africa, Holland, England and the United States. Festival Chairman J. W. (Wil) Anderson said that the festival received 250 entries from 12 nations.

Anderson attributes the success of the festival to the fact that it limits competition to industrial films; not accepting theatrical, experimental or avant garde films. This assures producers, sponsors and distributors that the focal point is on industrial films, not more glamorous

entertainment productions.

The festival has been a leader in sponsored film competition in several respects. It was the first to judge commercially produced, government, and in-plant films separately, assuring that in-plant produced films compete only against other in-plant produced films, and commercially produced films compete only against others. This year, the festival added the innovation of offering winning producers and sponsors a film leader saying that the film was a "Gold Camera" award winner in the 1969 competition. Winners may use the leader on distribution prints of the film so long as the film is unchanged and shown in the same form as entered in the festival.

The Chicago Film Council combined with the festival this year to attend the ceremonies as a special evening meeting.

Dignitaries attending the festival included the ambassador to the United States from the Republic of South Africa, H.L.T. Taswell, who was on hand to accept the first place award in the art and culture category for his government for *Radio Bantu*. The film describes the country's efforts to effectively communicate with its people through their seven separate languages.

Willard C. Wichers, Netherlands Information Service, accepted the first award in the public relations category on behalf of Carillon Films, N.V., Holland, producers of *Vision of A Reality*. The film just managed to nudge out Oscar winner *Why Man Creates* as the winning public relations film.

In addition to the winning films in each category listed below, special awards were pre-

sented by Ira Eaker of Backstage Magazine to Saul Bass for the Kaiser film *Why Man Create*, as the outstanding U.S. produced public relations film; and by BUSINESS SCREEN to Unitec Airlines for *Honolulu*, produced by Cal Berstein as the outstanding sports, recreation and travel entry. The Chairman's Special Award went to Pyramid Film Productions for *An American Time Capsule*, tracing the entire history of the United States through quick-cut slide motion techniques in a fascinating three minute documentary. All three producers were cited for outstanding originality and creativity.

The U.S. Industrial Film Festival concludes its 1969 season with a public screening of selected award winning films on June 2 at the Chicago Advertising Club. The 1970 awards presentation for industrial motion pictures and filmstrips will be held in Chicago April 20, 1970.

The 1969 "Gold Camera" award winning films in each category included:

COMMERCIALY PRODUCED

Advertising-Sales Promotion

A tie between *Subject: Packaging* produced by Goldsholl & Associates for Owens-Illinois and *Astroturf* produced by Jerry Gold & Peter Kalison for Monsanto Corporation. **FILMSTRIP WINNER:** *Her Infinite Variety* produced by Pilot Productions, Inc. for Luzier, Inc.

Art and Culture

Radio Bantu produced by Kilarney Film Studios (S. Africa) for South African Information Service. **FILMSTRIP:** *Part of the Pride*

roduced by American City Bureau/Beaver Association for National Music Camp & Interlochen Arts Academy.

Documentary

Tomorrow Is A Day produced by Guggenheim Productions, Inc. or Illinois Sesquicentennial Commission. FILMSTRIP: *Voting Is People Power* produced by Potomac Films for League of Women Voters.

Fund Raising

The Power of Mercy produced by Fred A. Niles Communications Centers, Inc. for Community Fund of Chicago.

Health, Welfare, Safety, Medicine

A tie between *The Transplants* produced by Medical Communications, Inc. for Johnson & Johnson and *Lifeline To Tomorrow* produced by Educational Media, Inc. for Baxter Laboratories. FILMSTRIP: A tie between *The Marvelous Mechanism* produced by Allied Concepts, Inc. for Continental Can Company and *What's It Going To Cost You?* produced by Portafilms for Consumers Power Company.

Industrial and Technical Processes

A tie between *No Greater Challenge* produced by Starbecker, Inc. for Atomic Energy Commission and *Garehey System of Refuse Disposal* produced by Basic Films Limited (England) for Mechanical Services Ltd. FILMSTRIP: *More Than Meets the Eye* produced by Allerton Berman & Dean for Tile Contractors Association.

Public Relations

Vision Of A Reality produced by Gerard J. Raucamp (Holland) or Philips N.V. FILMSTRIP: *The Where's and Why's of Tile* produced by Allerton Berman & Dean for Tile Contractors Association.

Recreation, Sports, Hobbies, Travel

Honolulu produced by Cal Bernstein Productions for United Air Lines. FILMSTRIP: *Ski The Outer Limits* produced by Summit Films, Inc. for Hart Ski Manufacturing Co.

Religion and Ethics

A tie between *Tour Fourteen* produced by Bill Stokes Associates for Baptist General Convention of Texas and *Birtright* produced by Fred A. Niles Communications Centers, Inc. for American Bible Society. FILMSTRIP: *His Too* produced by American City Bureau/Beaver Association for Bethesda Lutheran Home.

Sales

Race For The Wire produced by John J. Sughrue & F. X. Maguire for Anaconda Wire & Cable Co.

Training

World Championship Washer and Dryer Installation produced by Pilot Productions for Whirlpool Corporation.

Miscellaneous

Urban Sprawl vs. Planned Growth produced by Stuart Finley, Inc., for University of Pennsylvania.

GOVERNMENT PRODUCED

Art and Culture

Sydney Opera House produced by The Australian Commonwealth Film Unit (Australia).

Documentary

Alone, Unarmed and Unafraid produced by George Pratt for United States Air Force.

Health, Welfare, Safety, Medicine

On Guard produced by Don Hoster for District Attorney (Los Angeles).

Industrial and Technical Processes

Forest Without Spears produced by The Australian Commonwealth Film Unit (Australia).

Public Relations

USAF Combat Photography produced by Major Howard B. Landau for United States Air Force.

Recreation, Sports, Hobbies, Travel

Eighteen Footers produced by The Australian Commonwealth Film Unit (Australia)

Training

ADC Life Support Training School produced by Charles T O'Bork for United States Air Force.

IN-PLANT PRODUCED

Documentary

Campaign Culture produced by IBM Poughkeepsie for IBM Manufacturing Plant.

Fund Raising

One Out of Three (Filmstrip) produced by United Way, Inc.

Health, Welfare, Safety, Medicine

Toward Cancer Control For Women (Filmstrip) produced by Michigan Cancer Foundation for United Cancer Council.

UNIVERSITY PRODUCED

Documentary

Lisa's World produced by Barbara Roos.

Health, Welfare, Safety, Medicine

Kevin produced by Malcolm Tarlovsky for Syracuse University & Central N.Y. Eye Bank Assn.

Sciences and Research

Trigger Films produced by Alfred Slot.

W. C. Wichers (left) of the Netherlands Information Service accepts award from festival jury chairman Bill Terrell (center) as G. A. Garnes of Norelco looks on. Norelco sponsored the winning public relations film "Vision of A Reality" which was produced by Carillon Films in Holland.

Award winning entries received mounted plaques like this representing the "Gold Camera" award in a category.

Stuart Finley accepts "Gold Camera" award for winning entry in miscellaneous category, "Urban Sprawl vs. Planned Growth."

Conversing prior to presentation ceremonies are (l. to r.): Jack Lusk, Modern Talking Picture Service; John Grember, United Air Lines; Lon Gregory, editor of Business Screen; Mrs. Gregory; and Norm Lindquist, vice president Fred A. Niles Communications Centers.

IFPA JOURNAL

INFORMATION FILM PRODUCERS OF AMERICA, INC

IFPA Revises Film Competition

Information Film Producers of America (IFPA) announces the opening of its Cindy film competition for 1969. The Cindy competition, designed to honor creativity and technical excellence in the production of the information film, is open to all persons, member and non-member alike.

For the first time, three divisions of competition have been created, which basically correspond to the types of films being produced in the information film field today: the sponsored film, the institutionally produced film and the governmentally produced film. In each division, there are eight categories: public relations, training, employee relations, technical, sales and advertising, enrichment, academic instruction and special productions. Thus 24 gold Cindys will be awarded to the winners, and 24 silver Cindys to the finalists.

Presentation of the coveted Cindy statuettes of excellence will take place at the awards banquet of IFPA's Tenth Annual Conference, at the Sheraton-Palace Hotel, San Francisco, October 16, 17 and 18.

Interested persons who wish to enter a film in the 1969 competition, may contact Ira Thatcher, IFPA 1969 Film Competition Chairman, United Airlines, Inc. San Francisco International Airport, San Francisco, Calif., 94129, for further details, and entry forms. There is no limit to the number of entries per organization, but they must be postmarked no later than August 1. Entry fees are \$15 for IFPA members, and \$25 for non-members.

Blume 1969 Conference Chairman

Mitchell Rose, national president of IFPA, has appointed Wilbur T. Blume Program Chairman for the Tenth Annual National Conference. "Bill" has been charged with the task of arranging for the various presentations which are scheduled for the three day conference period.

Blume's professional experience and background in the major facets of the information film field: Government, Education, Commercial and In-Plant production, made him a logical choice to pull together the various elements of a program to interest IFPA's wide-variety of audio-visual communicators.

Bill Blume is presently Chief of the Motion Picture Production Division, Headquarters, Aerospace Audio-Visual Service, USAF. He moved to Norton Air Force Base last July from Lookout Mountain Air Force Station, where he had been a civilian producer-director for the past 10 years. Six of his produc-

tions have been Cindy award winners. In addition, he has, as a free-lance writer, scripted many films for various commercial producers. A Blume-scripted film for F Productions, "The Magic Knife", received silver Cindy in the 1967 film competition.

In 1956, Bill attained world-renown with his film, "The Face of Lincoln", produced while on the staff of USC, was awarded Oscar as the Best Short Subject of the year. He was on the USC staff for a total of years, prior to a year in commercial production, and then to the Air Force.

Other arrangements for the 1969 Conference are also coming into focus. Dick Foster, W. A. Palmer Films, San Francisco, 1969 Conference Chairman stated, "Our physical arrangements at the Sheraton-Palace are excellent. We will have the best available projection equipment for our speakers. The Cindy finalist screenings will be handled through three concurrent sessions to accommodate the 48 films to be shown."

According to Ralph Hall, executive director, "Booth reservations for the Trade Show are coming in rapidly. Our 1969 show will be the largest in the history of IFPA. We expect to be able to provide our conference attendees with displays of all the latest advancements in the audio-visual equipment field."

BLUME... heading 1969 annual conference.

West Membership Contest On

"The drive is on! — West Coast Membership, that is," so says Bob Montagu, chapters & membership V.P., West.

A unique contest was approved by the Board of Directors, and now each West Coast Chapter member, or member-at-large, can do his part to sustain IFPA's growth pattern.

Each member earns an IFPA lapel pin for the first new applicant he signs up, and for a little more effort — valuable merchandise prizes are being awarded to the top five recruiters.

Special contest kits and applications have been sent to all members, and additional copies are available from the National Office.

The survival of the fittest:

Darwin put it into words. Evolution. Elimination of the less suitable. Improvement of the breed. What's good survives; the rest fade out.

We put it into action. For as it is true with man, so it is true of machines. Those that function better, more efficiently, make it. Those that don't, don't.

At MPO we've been having a technological evolution ever since we brought out our first repeater projector. And our evolution is still going on.

We felt our Videotronic Super 8 projector would function better with permanent lubrication. So we did it. Put permanent lubrication at all major points of friction.

Then we put our minds to coping with today's increasingly rugged shipping conditions. To improve our projector to better withstand them. So we strengthened the metal bed plate and all inside components. Strengthened the outside case and added metal shields to all corners. Reinforced the mountings of the solid state amplifier and the amplifier itself.

Next, we focused on the actual functioning of the projector. Because some of our customers used the projector in the tropics, they wanted an oversized cooling system. So we improved the blowers and air flow to enable our projector to keep its cool under the most extreme heat conditions.

Our attention then turned to overload problems. Other projectors were having them. We didn't ever want such a

possibility. So we increased our motor capacity. And redesigned our motor drive system to cope with frequent overloading.

The film itself can occasionally cause problems. And we were out to anticipate those. We altered the film gate and the sound head so they can better withstand the abrasive conditions imposed by the occasional poorly slit and excessively dirty film. But with all our improvements over the years, we—and all the other projector manufacturers—have still been plagued by occasional film breakage...

Now. The most important technological advancement in the history of loop projection.

In the process of working on these film problems, we developed an improved Super 8 film cartridge.

Our latest cartridge has a metal film guide that positions the film as it's drawn

from the center of the coil. We've also added metal strips in the plastic platters. Now only metal touches the film's edges. We further strengthened the cartridge's long wearing capabilities with rollers of new wear-resistant plastics. Result? Virtually the end of film breakage. Our new cartridge does away with center film breakage due to surface dirt. It also prevents any damage from a pronounced "set" in the film from inactivity.

And so our evolution goes. And so it will go on. Because thousands of customers are using our projector. In the field, where it really counts. Because we're constantly in touch with them. Making modifications to their needs. And doing our own extensive tests in the lab as well.

And because we're continually refining and improving our projector, our Super 8 projector always is new, refined and bettered.

The simple yet complex process of evolution.

The survival of the fittest: MPO Videotronic Super 8

“THE ARRIFLEX® STORY”

Arrange to see
this absorbing film
on your own screen

No matter whether you have been using Arriflex cameras for years or contemplating buying your first, this 32 minute color and sound 16MM film provides “inside story” information that will heighten your appreciation or resolve your interest in these sophisticated filming tools.

HOW ARE ARRIFLEX CAMERAS MADE?

“The Arri Story” takes you to West Germany on a guided tour through the ultra modern Arriflex plant. Here you witness first-hand, design and detailed manufacturing steps of these world renowned cameras from drawing board to finished product.

WHY ARE ARRIFLEX CAMERAS SO RELIABLE? It's all in the meticulous unrelenting testing procedure before a single camera is ever checked out of the plant. “The Arriflex Story” shows you how and why more time is devoted to testing and inspection than actual fabrication. When finally you reach the final check-out test you'll understand why Arriflex cameras consistently produce ultra-sharp, rock-steady footage to the highest professional standards.

WHAT'S THE RANGE OF ARRIFLEX ASSIGNMENTS? “The Arriflex Story” takes you literally around the world and to many of the more than 100 countries where Arriflex is the preferred camera among professional cinematographers. From Alaska to Zanzibar, on assignments as diverse as missile tracking to microbe hunting, from cinema art to newsreel, you will witness the facts that have earned Arriflex its reputation as the most versatile, most reliable professional motion picture camera in the world.

“THE ARRIFLEX STORY” is offered on loan without charge for screening anywhere in the continental U.S.A. to the following groups: Professional producers and cameramen, professional associations and affiliated chapters, institutions teaching motion picture production, Government Agencies and services concerned with motion picture production. Please request on letterhead.

IFPA journal . . .

continued

Non-members who want to get in on the action — can. Just contact the National Office for membership information, join up, and start recruiting. And remember, just 5 members in an area is all it takes to petition for a chapter charter.

The contest will run through June, with winners to be announced shortly thereafter.

Naval Photo Center Hosts DC Chapter

Lt. Commander Sims Howell, one of the founders of the Washington D.C. Chapter, hosted the group at the Naval Photo Center for their April meeting.

The 16 new chapter members from the Navy were introduced to the rest of the group, the newest Navy productions were screened, and members toured the NPC facilities.

At the business portion of the meeting, the May and June meetings were firmed up. May will see the group at the Applied Physics Laboratory, Johns Hopkins University, hosted by Jay Brubaker; while in June, the Chapter will journey to Hi Point, No. Carolina, as guests of Art Salkin, of Alderman Studios.

Nor-Cal, SMPTE Host Joint Meeting

Northern California Chapter's March meeting was a cooperative IFPA-SMPTE venture hosted by SMPTE at Kodak's Van Ness Avenue Main Offices.

With approximately 90 attendees from industry, labs, and schools (including students), the program featured multi-media presentation techniques by Kodak.

A surprise feature was a multi-media presentation by the Harry McCune Company of a self-contained, three carousel, four speaker system which provides via programmed tape a completely automatic production.

Harry McCune has been in the sound equipment rental business for years, and his progress from frog-voiced bull horns for ball games to high quality deluxe sound projection equipment is noteworthy.

The McCune system is housed in a lectern-type cabinet about 4½ feet high so well sound-proofed that the blower system was completely inaudible.

Joint 8, Super 8 Seminar Planned

The Northern California Chapter in association with the Bay Area Chapter of SMPTE, is presenting an all day seminar on 8 and Super 8.

Ray Grant, seminar chairman, assisted by Dick Foster, along with other members of both groups, have put together an exciting program for the day.

The seminar will be held Saturday, May 24th, from 9 a.m. to 5 p.m. at the Imperial Room, Miyako Hotel, Japanese Trade Center, San Francisco. A nominal registration fee will be charged.

The keynote speaker will be Dr. Erwin

Moon of the Moody Institute. The morning session will be devoted to individual presentations by producers of 8mm and Super 8 formats. Among those are Richard Lewis San Jose State College discussing “Educational Uses of Super 8”, and Bill Wagner Wells Fargo Bank, Training Dept., speaking on the “Industrial Applications of 8mm and Super 8”.

Also on tap for the morning are demonstrations by manufacturers and distributors projection systems for these formats.

IFPA Names in the News . . .

Robert S. Scott was recently transferred Washington D.C. to become Manager of the firm's Washington Operations. Scott, who is Chairman of IFPA Board of Governors, and a former National President, has been long active in the organization's affairs. His advice and guidance will be most valuable to the neophyte chapters in the East.

Lutz Winkler, secretary-treasurer of the San Diego Chapter was recently promoted to Photographic Manager of the Naval Electronic Laboratory Center, San Diego.

"They" Explored in Newest Urban Focus Series Film

Urban Focus, a series of films aimed at giving city youngsters a feeling of excitement about their environment — and the confidence to reap its riches, called upon the services of curriculum specialists, psychologists, sociologists, city planners, urban architects, historians and teachers from public, private and parochial schools in its preliminary studies.

An Imaginary They is the newest release in the series and explores the mythical "they" to whom much is ascribed in today's large, complex and seemingly unresponsive cities. Included in the series is *Generations*, *Work My Name* and *My City*.

Sponsored by Pepsi-Cola Education Service, further information may be obtained from Modern Learning Aids, New York, New York.

Continental Can Shows Litter Costs Money

Continental Can Company has recently completed production of an employee-oriented film showing the vast costliness of littering. Cooperating with the Keep America Beautiful campaign, Continental Can had Applied Concepts (New York) create the film as part of its continuing employee Communications Program.

Released originally as a soundtrack, the sound track and cartoon art were re-worked so that the film could be released to the general public in 16mm or 8mm film and sound. The title, *The Upper Place*, indicates the how-to of litter disposal. The film, done as an animated cartoon, shows containers and their disposal problems throughout history in a light, but meaningful way.

The movie has been cleared for TV and is also available for civic, fraternal and industrial groups.

Training Personnel in Improved Attitudes

International Salespower Institute has produced a new sound-filmstrip series training program designed to improve the attitudes and performance of office, plant, store and outside service personnel.

All in color, the strips are entitled *Meet Yourself*, *Meet Your Attitudes* and *Meet Your Future*; and demonstrate the effects of employee attitudes on customers, the business and themselves; and show why the productive employee is sure to get ahead. Good and bad ways to handle typical situations are demonstrated by live models.

Inquiries should be directed to Modern Learning Aids (Business and Professional Programs), New York.

Six New Technical Motion Pictures Available

Six technical motion pictures are available from the Atomic Energy Commission through its motion picture film libraries or by contacting Chief, Audio-Visual Branch, Division of Public Information, U.S. Atomic Energy Commission, Washington, D.C. 20545.

The films are: *Molten Salt Reactor Experiment*, 20 minutes, color; *Fire Loss Management, Part II: Computer Installations*, 20 minutes, b/w; *TRIP Steel*, 11 minutes, color; *Response to Mechanical Shock*, 18 minutes, color; *Terradynamics*, 21 minutes, color; *ACCEL Revisited: Automated Circuit Card Etching Layout*, 20 minutes, color.

Arnold Palmer Triumphs In New Kemper Open Film

The 1968 *Kemper Open* shows how Arnold Palmer's winning form overtook the leader to win the last round of the first Kemper Open Golf Tournament,

sponsored by Kemper Insurance.

Produced by Transworld International, the 28-minute color film is available from Modern Talking Picture Service film libraries throughout the country.

Tandberg's Love Child

"Pilotone"
Model 11-1-P

PORTABLE/SOLID STATE/BATTERY OPERATED/TAPE RECORDER

for Professional Sound/Film Synchronization

At first, it was almost a "labor of love" to meet all the rigorous dictates for Tandberg excellence. Then, after exhaustive development, a fine product was born—the fully transistorized, 9½ lb., Model 11-1-P. To achieve lip "synch", this newest Tandberg instrument records a pilot signal from the camera, and accommodates a Tandberg synchronizer. It features 5 heads, 3 speeds, 7" reel capacity (cover off), electronic tape speed governor, automatic overload limiter, rugged, climatized (+15°F to +115°F) construction, built-in speaker; accepts ten 1.5V D cell batteries or nickel cadmium batteries.

SPECIFICATIONS

Heads: full track — erase, record, playback; neopilot; tachometer for speed control; Frequency Response: 7½ ips — 30-20,000Hz (±2db 40-16,000Hz); 3¾ ips — 30-13,000Hz (±2db 50-9,000Hz); 1½ ips — 30-7,000Hz (±2db 60-4,500 Hz). Signal-to-noise Ratio: @ 7½ ips 61db. Wow: 7½ ips better than .1%; 3¾ ips better than .15%; 1½ ips better than .35%. Erase & Bias Frequency: 85.5KHz ±2KHz; below 5% distortion. Absolute Speed Tolerance: ±0.5%; Transistor Complement: 41 transistors, 8 diodes, 2 zener diodes. \$699.00

Optional Accessories:

Synchronizer \$350, Carry Bag \$29.95 AC Power Supply \$44.95

for better, clearer, more natural sound

ALSO AVAILABLE

For on-the-spot, professional type recordings in ½ and full track models, 3 heads, 3 speeds, 7" reel capacity. \$449.50

"A Medal of Gold" Ice Skating "As It Is"

Where one man's ice is a drink-cooler, and another's is a highway hazard, to the skater ice is a challenge and a delight — a surface over which lithe bodies on steel blades can move with speed, rhythm and grace. To demonstrate the enjoyment skating provides both spectator and participant, and to promote skating generally, the Essex County (New Jersey) Park Commission has produced a 36-minute, 16mm black and white sound film entitled *A Medal of Gold*, which presents vignettes of many of ice skating's "greats" in dramatic motion, shows "ordinary" people having fun on ice, and sketches a child's dream of skating-skill and her success in achieving it.

Appropriate sidelights are woven into the film: The contrast between antique and modern skates, and how the changes came; the origin of speed-skating in Scotland, and ice hockey in Canada; the fact that an American ballet master introduced showmanship to ice skating, but found Europe a more receptive audience, with the American public, unknowingly, waiting for Sonja Henie to popularize skating throughout the world. . . . But there's no point in telling all that takes place: the film is for seeing and hearing, and this is fun for athlete and non-athlete alike.

Etienne Noir, who manages the South Mountain Arena, an ice rink in West Orange, was the in-plant producer and made skillful use of camera and cutting room. Financial support for what had to be a very low-budget production, and which overcame the limitation nicely, was subscribed by the Essex County Park Commission.

A limited number of prints circulate for audience showings at a modest handling charge plus postage. For information, write Essex County Park Commission, 566 Northfield Avenue, West Orange, N.J. 07052.

New Approach in Safe Driving, Effects of Drugs

Drivin' and Drugs tells it like it is to teen-agers, presenting the facts about two major driving hazards. The 14½ minute color

safe-driving film released by Chevrolet follows *Drivin' and Drinkin'*, released just two months earlier.

The subject matter was selected on the basis of a survey of representative driver education instructors throughout the country. It signals an important breakthrough in the automobile industry's approach to driver education. Heretofore, such subjects have usually been soft-pedaled as "too hot to handle".

Both films are available to school and community groups from the film libraries of Modern Talking Picture Service.

Conservation from A New Viewpoint by Cinemakers

Film Director Ed Schultz and Cameraman William Doherty of Cinemakers, along with nine Senior Girl Scouts and their leader, recently went roughing it in the knee-deep snows of the Great Smokies.

The scenes of the teen-agers hiking, pitching tents, cooking and making themselves at home in the outdoors will be the opening sequence of a new film designed to encourage greater use and appreciation of natural resources. During the year, the film crew will travel more than 5,000 miles under the sponsorship of the national Girl Scout organization to document young people living in the outdoors in a variety of locales and climates.

"Conservation is usually thought of as a solemn duty," said Carol Hale, Cinemakers' writer producer, "but we're trying to show conservation also means enjoying our natural resources. As the crush of urban living grows," Mrs. Hale added, "the more young people will need to get out in the open, and not just as passive observers, but as active participants."

"Even more basic than that," Schultz commented, "we hope that seeing how these 9 to 17 year old girls live in and enjoy the out-of-doors will show others that there are ways of enjoying our natural resources without littering them up or running the risk of burning them down."

The 16mm color and sound film is slated for release in the fall of 1969.

Express Abstraction in Unique Approach

A new film expressing abstraction in a unique manner is now being used for public relations sales and recruiting purposes by Raybestos-Manhattan, Inc.

Raybestos-Manhattan searches and produces composite materials. This is the science strengthening the weaknesses natural and existing materials combining them with other natural materials, with treated alloys and with specialized plastics. Composite materials, now and the future, must meet the demands of modern technology.

In the film, Director Paul Harvey of Pelican Films, Inc., visually communicates the turmoil of a creative mind in search of an answer to a modern industrial problem. Through images, the film reflects the progressive approaches and attitudes of the company, rather than concretely focusing on its existing products.

Portrayal of the abstraction of the turmoil of a creative mind in search of an answer to a modern industrial problem in the film "The Future Is Our History."

To portray this abstraction, Harvey constructed a maze, a large rectangular box measuring 40 feet long, 4 feet wide and 4 feet high. Louvers, like those of a venetian blind, were cut in both sides of the wooden box and flood lights with colored gels produced the great variation of light inside the maze. The camera inside the container moved through the slanted light toward a door which opened and closed. Shots, both in and out of focus, were deliberately over-exposed parts.

The film, which combines original and stock footage, maintains a non-literal, impressionistic feeling throughout. An original score by Harold Seletsky reinforces the total mood.

The Future Is Our History concentrates on today and tomorrow — in all facets of man's

earth and in space. Products distributed to seventy-five nations in the free world for governmental, industrial and consumer uses.

Credited for the film are: director, producer, designer — Harvey; editor — Bengt Merschfeld; writer — Stan Sobel; musical composition — Harold Seletsky; camera — Garfinkel; agency — Gray Rogers, Inc., Philadelphia, Pennsylvania.

Blue Berets Shown in Peacekeeping Functions

A new visual presentation on the basic issue of our time, the United Nations peace-keeping function, is now available for distribution from the United Nations Association of the United States of America.

Peace-keeping: UN Business is behind the scenes with the men in the blue berets doing the day to day job of trying to bring the peace. Scenes include activities in Panmunjom, Jerusalem, Cyprus and the Congo.

The presentation is available in 100-slide and script form for \$7.50, or as a 23-minute filmstrip/record for \$6.50. Write to UNA-USA, 833 United Nations Plaza, New York 10017.

Atom in Peacetime, Atom in Medicine

Two popular-level color motion pictures, produced by CBS-TV, for its series "The 21st Century" are now available for free showings through the Atomic Energy Commission's free-film libraries.

The Mighty Atom, host-narrated by Walter Cronkite, is a summary of the peacetime applications of the atom. *Atomic Medicine* outlines the expanding applications of atomic energy for diagnosis and treatment of diseases.

Wild Fisheries' Films on Estuaries, Conservation

Two films on estuarine resources and conservation have been made by The Department of the Interior's Bureau of Commercial Fisheries in cooperation with the Gulf States Marine Fisheries Service.

Estuarine Heritage, which is 28 minutes, covers the role of estuaries as "nurseries" for economically important species;

as the habitat of waterfowl and furbearing animals; and as a recreational and esthetic resource.

The Boy and the Biologist, a 14-minute film, is based on an encounter between a youngster, intent only on fishing and fun, and the older outdoorsman who shares with the boy his more knowledgeable perspective and sense of responsibility.

A catalog of films may be obtained by writing the Bureau's Branch of Audio-Visual Services, 1815 North Fort Myer Drive, Arlington, Va. 22209.

How Air Freight Works, Advantages to Industry

The Air Freight Marketing Group, composed of 33 airlines operating in the U.S., is currently using a combined motion picture and slide presentation to interest various industries, such as pharmaceuticals, textiles, etc. in the advantages of air freight.

The motion picture, titled *Right Now* is a marketing story with well-conceived graphics illustrating how air freight works. It points out that the flexibility or rapidity of regular air freight shipment eliminates the need for regional warehouses and the problems of out-of-stock items; as well as reducing obsolescence

and providing released capital for other uses through the lessening of warehoused stock requirements.

The Air Freight Marketing Group arranged for presentations of the industry story at industrial conventions and other suitable gatherings. Following the opening 14-minute motion picture, a "skid" moves on stage composed of modular blocks upon which a slide presentation keyed specifically to the audience is projected. Four Carousels are used in this part of the show, along with live speakers detailing how air freight can particularly serve the industry. A panel discussion with a moderator and four key people from the airlines participating winds up the hour-long session.

The entire presentation — motion picture, modular stage display, slide show, walk-out music, convention display with continuous "side-winder" film-strip and a hand-out booklet — was designed, staged and produced by Terry Colasacco, of Filmex, Inc.

Plans have been made for the Air Freight Marketing Group to present its story to 12 different industries at conventions during the year. The presentation fits into crates for easy transportability by air cargo.

At a recent preview showing before the Civil Aeronautics Board in Washington, George Zettler, of the Flying Tiger Line, who is president of the Air Freight Marketing Group, was key speaker.

Lunar Landing Craft Film Showing on Campuses

With interest running high in lunar landing craft at NASA, a short film called *Alcoa Lunar Landing Craft* is being shown daily on College campuses across the country.

The four-minute color movie is devoted to the winning project in a student design contest sponsored by Alcoa. It shows exactly how the 25-foot student model would operate.

Public Service Series Released by Harvest Films

A new series of 10 public service TV spots on the subject of Health Careers has been completed and released by Harvest Films, Inc.

Produced for the State of New York Department of Health, each spot deals with a specific health career and outlines the opportunities in the field.

Would you want to Pyramid your sales — with salesmen who call on prospects and customers with ideas that create need and desire for your products and services?

And would you prefer salesmen — who by selling creatively — bring prestige to your company, your product and to themselves as salesmen?

If so — won't you want to show them

"CREATIVE SELLING"

... the fourteen meeting audio-visual salesmanpower development program on the attitudes and techniques of helping people buy benefits?

Complete with — Sound Color Filmstrips, Programmed Leader's Manual, Salesmen's Manuals, Workshops, Diplomas, Quizzes, Evaluation Reports, Graduation Hats and Pins.

CREATIVE SALESMEN SELL 16 TIMES MORE!

Records show that Creative Salesmen average 16 times more business than the average of ordinary salesmen. With such men, wouldn't you be taking a giant step toward solid company growth with increased profits? "Creative Selling" is designed to do this for you.

RESULTS YOU MIGHT WANT!

If your salesmen had as much knowledge of people — as they have of your product — wouldn't they be better salesmen? Wouldn't the result be that your customers and prospects would think of them as warm, friendly, responsive and interested men — and the kind they're always glad to see and do business with?

Wouldn't you want a salesmanpower development program that does this — by showing men ...

... a method of selling that creates need and causes prospects to want your offering?

... a method of selling that creates trust and confidence and minimizes sales resistance?

... a method of selling that creates more closes, easier closes and minimizes lost sales?

... a method of selling that creates more new business, more repeat business and more referral business?

These are the results you might expect from showing "Creative Selling" to your men.

YOU BE THE JUDGE!

Should this advertisement indicate some of the objectives you want for your salesmen — wouldn't you wish to know all about this program — and our offer for you to see it and judge it, before you buy?

IF SO — MAIL THE COUPON BELOW!

BETTER SELLING BUREAU Dept. X5-9

Bohn Benton Announces Compact Sound Projector

The Institutor, a Super 8 cartridge sound projector, offers a number of advances, beginning with its remarkably small size. Closed, the model is an attache case only 4 inches thick, 13 inches wide and 16 inches long and weighs only 17 pounds. The 9 x 12 inch picture screen folds neatly inside, ready to snap into position as soon as the cover is opened.

For larger audiences, the Institutor projects pictures up to 6 feet wide on a wall screen. It also stops the picture on any frame for prolonged examination. The Institutor incorporates a solid state audio system, a built-in speaker, and a jack to connect an external speaker for auditorium sized audiences, or an ear-phone for private listening.

The cartridges, which can be changed in two seconds, hold 18 minutes of color film and include a broken film detector and an

This portable cartridge loaded, Super 8 sound projector folds into a convenient attache case.

automatic loop setter to prevent film damage.

For further information write Bohn Benton, Inc., 110 Roosevelt Avenue, Mineola, New York 11501.

Equipment Cases Feature Added Protection

Fiberbilt Photo Products has introduced a line of aluminum clad cases designated the P-20. Like other Adapt-A-Cases in their line, it features a system of moveable, interlocking partitions and padded interior of super-cushioning foam. The P-20 is

The Adapt-A-Case P-20 provides protection for equipment.

available in 8 sizes, each of which is lightweight and of rugged, rivetless construction. Tongue and groove closure with rubber gasket insert provides dust and weather protection.

For complete information write Fiberbilt Photo Products, 601 West 26th Street, New York, New York 10001.

Electric Zoom Lens for CCTV, Videotaping

Concord Electronics Corporation has introduced an electrically-controlled zoom lens and remote control panel for closed circuit television, security and video tape recording applications.

The lens is a 20-55mm zoom with a standard C mount and is interchangeable with all Concord television cameras. The built-in electrical motors connect to the control panel which allows all functions of the lens including zoom distance, focus and zoom speed to be controlled electronically with push-button ease.

In security installations, the panel serves as a remote control device for instant zoom and focus on specific subject areas from a separate location. It may be used in single or multiple camera arrangements with a central console system.

More video tapes can be made for business, education and train-

ing since the motorized zoom provides a smoother transition. The control panel may also be mounted on the Concord viewfinder camera for convenient fingertip control by the camera operator. For additional information, write Concord Electronics Corporation, 1935 Armacost Avenue, Los Angeles, California 90025.

Fortune Audio-Visual Introduces Mor-Lite

Fortune Audio-Visual has announced the development of a 1000 watt lamp system using the autofocus Carousel type slide projector. The Mor-Lite projection system provides more light than the standard 500 watt machine lamp and is compatible with all Carousel lenses and may be used with super-slides. To assure adequate cooling, the fan continues to run after the projector has been turned off and automatically shuts off when the projector has cooled. Lamp brilliance is variable from "Off" to "High".

The additional light is particularly desirable in conference rooms where dimming of lights

1000 watt lamp system provides more light than standard 500 watt machine lamp.

often impedes good rapport between participants. The autofocus feature, in addition to the added light, provides a good tool for use in auditoriums.

Additional information is available from Fortune Audio-Visual, 30-24 Broadway, Fair Lawn, New Jersey 07410.

Radiant Offers Projector For 8mm Film Loops

A table top rear projector viewer specifically designed for Technicolor Super 8mm projectors has just been introduced by Radiant Educational Company.

The unit features an exclusive Uni-Glo screen surface, improved optical diffusion process reported to produce high light gain, even edge-to-edge sharpness, exceptional color fidelity and picture brilliance over the entire square inch viewing area with minimum fall-off under normal room lighting conditions. The unit requires only 2 square feet of desk space, folds up for storage to a compact 12" x 10" x 9 1/2", features a shock mount

Though light weight and easy to handle, the viewer is ruggedly constructed for years of trouble-free service.

mirror, heavy gauge steel housing in wood-grain vinyl finish, hand-fitting handle for carrying ease and non-slip rubber base feet.

For further information write or call Radiant Educational Company, Morton Grove, Illinois 60053.

Birns & Sawyer Offers Improved Tripod

Birns & Sawyer has placed on the market an improved and sturdier medium weight VGM-20 tripod. The tripod, designed for such cameras as the Arri 16, Eclair 35, Mitchell, Eclair and other medium weight cameras often using long lenses, has thicker flanges of polished stainless steel and single-knob leg lock with heavier thread. For less leg weight and more solidity, die-cast tripod shoes are an inch wider at

case with stainless steel shoe joints. Legs are straight grained Mountain Ash, mahogany stained and oil treated. They are also available in flat-top casting for Friction Heads, O'Connor and Miller Fluid Heads and in all Collars for use with Leveling Heads. Babies in Flat-Top and Ball Collar are also available.

For more information write Harris & Sawyer, Inc., 1026 N. Highland Avenue, Hollywood, California 90038.

Anamorphic Lenses for Bauer P6 Auto Projector

Two anamorphic lenses introduced for the Bauer P6 Automatic Optical/Magnetic Sound Projector bring a new dimension to 16mm films. The two lenses are available from Allied Impex Corp., exclusive United States importer of Bauer products.

The lenses are:

- 1) The Moeller anamorphic lens (32/2X) for use with 35mm and 50mm projection lenses.
- 2) The Moeller anamorphic lens (46/2X) for use with 65mm and 75mm P6 Automatic Projection lenses.

Both of these anamorphic lenses have an unsqueezing factor of 2 times, and focus adjustment in both meters and feet.

For additional information, contact Allied Impex Corp., a division of AIC Photo, Inc., 168 Green Cove Road, Carle Place, N.Y. 11514.

Programmer Synchronizes Slides and Narration

The Cue-Slide Programmer, produced by the Klitten Company is a sound slide synchronizer which will work with any remote controlled slide or filmstrip projector and any stereo tape recorder. It is designed to provide flexible and automatic slide projector operation for synchronizing tape recorded commentary, background music or sound effects with specific slide sequences for instant playback. Completely automatic, the Cue-Slide Programmer generates an electronic signal that is recorded on the second track of a stereo tape. On playback the silent signal advances the slide projector to the next slide. Trip signal is automatically timed—duration adjustable from 0.1 to 1.0 seconds.

Completely flexible, Cue-Slide does not limit the user to the original program arrangement

The Cue-Slide Programmer is ruggedly constructed and weighs less than four pounds.

but one can adapt and change slides at will to fit varying requirements and either track can be edited or updated at any time. It can also be used to trigger or signal impulses to separate remote animated mechanisms with or without sound or narration.

Further information is available from The Klitten Company, Inc., 1213 North Amalfi Drive, Pacific Palisades, California 90272.

Low Cost CCTV Cameras Introduced

The first low-cost broadcast and closed circuit color television cameras designed to operate on both PAL and SECAM systems have been introduced by International Video Corporation. The cameras are fifty cycle versions of the IVC-100 NTSC color cameras now used extensively in broadcast and closed circuit applications. The cameras, the IVC-101, for use in closed circuit applications, and the IVC-121, the broadcast model were first exhibited at the International Broadcasting Convention in London.

The IVC-100 series cameras make live color television practical for educational, industrial and medical applications for the first time and permit broadcasters

to use professional quality color at unprecedented low cost. The camera and the IVC-800 series color videotape recorder combine to make an unusually attractive, high quality color television recording system. The viewfinder has a switcher that enables viewing of red, green, blue or luminance signal.

External features include gain, pedestal, iris, zoom and focus controls as well as intercom jack and tally light. The IVC-100 has

Extremely portable camera weighs only 67 pounds.

a maximum of 28 internal set-up adjustments, far fewer than any professional quality color television camera. Further details from International Video Corporation, 67 East Evelyn Avenue, Mountain View, California.

The new Norelco FP-16 16mm Projector that...

BRINGS BIG-THEATRE PERFORMANCE to your auditorium. This remarkably rugged projector is engineered to the same high standards demanded by professional motion picture theatres.

PACKS A 2½ HOUR FILM ON ONE REEL. No rewinding or reel changing interrupts the show. Runs forward or reverse. Adapts to automatic operation and remote control.

THROWS A BRIGHTER, CLEARER, STEADIER PICTURE across the largest auditorium. Doesn't require total darkness. Nine different Norelco lenses, including a new 200m lens, available to fit your needs. Uses Xenon or carbon arc light source—or can be purchased with built-in 500 watt ozone-free Xenon lamp house.

BRINGS FILM SOUND INTO PERFECT BALANCE with room acoustics. Optical and magnetic sound.

REMARKABLE VALUE! Send coupon for prices and facts.

Column-pedestal Model FP-16 for auditoriums, screening rooms, and theatres.

Portable self-contained Model EL 5100 for outdoor showings, exhibits, social halls, etc. Uses incandescent or GE's Marc 300 light source.

Dynamic Dissolve System Offered Carousel Users

Spindler & Sauppe, Inc. has announced that its Dynamic Dissolve Slide Projection System is now available with a Model 772 master control unit specifically designed to function with a pair of Kodak Carousel or Ektagraphic projectors (except for the random access projector). The system's control plugs directly into the standard remote control receptacle of the Carousels and requires no modification whatever to the projectors.

All of the special effects, including multi-speed dissolves, animation, fades, zooms and supers, which were formerly possible only with the firm's own Selectoslide professional slide projectors, are now available to Carousel users. The solid state system includes a hand-held remote control for focus, three advance dissolve speeds (one of which is a variable speed dissolve), a reverse dissolve and a standby mode, plus a button to illuminate the top of a snap-in, three-foot pointer. The system may be controlled by a projectionist or an electronic programmer or both, and is capable of

Kalart Projector Offers High Intensity Light

The Kalart Company has introduced a combination 16mm suitcase-type, self-contained rear screen repeater/standard projector. The Kalart/Victor Model STM-18MC3 projector features the MARC 300 high intensity light system and special power pack producing four times more light output than projectors using standard incandescent lamps. Films can be projected repetitively to the built-in TV type screen by means of a repeater magazine which eliminates threading and rewinding.

The Kalart/Victor Model STM-18MC3 is easily converted

Kalart/Victor Model STM-18MC3 can be used as repeater rear screen or standard projector.

to a conventional projector for projection to a remote screen in an auditorium by simply attaching reel arms with up to 2,000 ft. film capacity and folding away TV-type screen. More information is available from The Kalart Company, Inc., Plainville, Connecticut 06062.

"Brand 7" Mag Type At Top of Robin's Line

A magnetic recording tape with a smoother oxide surface resulting in increased output, reduced distortion, better frequency response and improved uniformity, has been introduced by Robins Industries under the label, "Brand 7".

Each "Brand 7" reel has a leader tape at the beginning and a red at the end. With pre-spliced aluminum-foil sensing and timing strips, the tape is ready for use with automatic stop and reverse-control recorders and other electronic sensing devices. The tape is packaged in coded library boxes and is available in 3 1/4", 5", and 7" reels of 1 and 1.5-mil acetate and .5 and 1-mil polyester. There are ten varieties, double play and triple play varieties. For more information contact Robins Industries Corporation, 15-58 127th Street, College Point, Flushing, New York 11356.

Adjustable Hanger Holds A Variety of Luminaires

Berkey-ColorTran, Inc. introduced the Anti-G Adjustable Hanger which supports luminaires weighing from ounces to pounds. A fingertip knob control permits the dialing of appropriate weight settings. Height adjustment is possible at foot level or through pole operation. The unique suspension device prevents the Anti-G Hanger (HAG) from twisting and holds the luminaire securely in any position.

HAG is constructed of rugged aluminum and is available in three models. The HAG-10 weighs 14 lbs., extends to a maximum of 6 feet and telescopes to a minimum of 22 3/4 inches. The HAG-10 extends to a maximum of 10 feet, telescopes to a minimum of 32 1/2 inches and weighs 15 lbs. The HAG-15 weighs 15 lbs., extends to a maximum of 15 feet and telescopes to a minimum of 44 1/2 inches.

Additional data is available by writing to Berkey-ColorTran, Inc., 1015 Chestnut Street, Inglewood, California 91502.

Full Line of Star Filters Available at Gordon

Alan Gordon Enterprises has available on a sales or rental basis a complete line of Star Filters, popular special effect filters designed to accent highlights with starlike patterns. The hand-etched filters are offered in Series 5 through Series 9, and a special Series 9.

For further information contact Alan Gordon Enterprises, 5000 North Cahuenga Boulevard, North Hollywood, California 91605.

The Revolving Door . . .

A Shattering Look at Our Jails and Lower Courts

The impact over the past three years of The American Foundation film program dealing with our entire system of corrections has been most impressive. *The Odds Against*, a 1967 Academy Award nomination, and *The Price of a Life* have both made a tremendous impression on the professional and lay public alike.

The third film in the series, *The Revolving Door*, goes beyond even this high standard. Nominated this year for an Oscar, this film takes a long, hard look at what the President's Commission on Crime called "the single most important area in the problem of crime and violence." The image reflected is not pretty — and based on initial audience response, *The Revolving Door* seems destined to play a major role in the current reappraisal taking place in this vital area.

Lee R. Bobker, who wrote and directed the film for Vision Associates, and Frank Loveland, then director of the Foundation's Institute of Corrections, spent almost a full year touring the nation's jails and courts. From these trips a working script evolved that dealt with three main areas:

- (1) The incredible flow of humanity that passes through our lower courts,
- (2) the conditions inside our jails,
- (3) the lack of any programs designed to radically change the entire approach to the problem.

The working crew consisted of Ann Eisner, Bobker's associate producer, Arthur Fillmore, St. Louis cinematographer, Bob Baur, his assistant, Don Matthews, sound man, Bob Rogow, boom operator from New York, and Tom Cestare, New York electrician.

Shooting took place in Connecticut, Pennsylvania, Colorado and New York. Everything was revealed on film. The incredibly crowded courts where 30 to 50 people were sentenced as a group, where 600 persons passed through the court in a single day, where a single judge handles 25,000 cases in a year. As the script eloquently states:

"Each year in the United States there are five million arrests for minor crimes.

"Over 90% of all the nation's criminal cases are heard here . . . in the "lower" courts in an atmosphere scarcely consistent with the effective administration of justice.

"Most lower court judges are provided with no meaningful information about the offender . . . they have no pre-sentence reports upon which to base their sentence.

"Most of our lower courts offer *no* probation service. The more serious offender . . . the felon, can be placed on probation. For the minor offender it is a choice of fine . . . or jail . . . or both.

"The judge . . . facing an increasingly crowded calendar, has little choice but to dispose of the cases before him as rapidly as possible.

"In some cities, over 25,000 misdemeanor cases a year are handled by a single judge.

"This is production line justice . . . and it accomplishes nothing.

"Arrest . . . detention . . . trial . . . jail . . . release . . . arrest . . . and so on — a *revolving door* of futility and despair."

The film probes inside jails where idleness breeds despair and degeneration. Again, from the narrative of *The Revolving Door*:

"Today, the jail is the most overlooked, forgotten and ignored of our correctional institutions.

"And yet the jail must handle 35 times as many persons as do all our state and federal prisons.

"Many cities spend more money on their municipal cemeteries than they do on their jails.

"There are over 3100 county and city
Continued on page 39

in atmosphere of idleness there is only time deterioration . . . time to become more de- . . . and to lose what remaining self- . . . a person may have."

Graflex Service Center Moved to New Location

The Graflex Division of The Singer Company, announces the opening of their authorized service department in new enlarged quarters at the main plant, 3750 Monroe Avenue in Rochester, New York.

According to John King, manager product services and systems, the factory service department, formerly located at Boxart Street, will now be located at the factory facility in new, modern quarters.

Alpha Cine Supply Co. Opens in Seattle

Alpha Cine Supply Company, headed by Les Davis, long-identified with Alpha Cine Laboratory, Seattle, Wash., has been established at 4405 Leary Way, N.W., Seattle, Wash. 98107 for the manufacture of film processing equipment. The firm has an international outlet in Vancouver, B.C., in Alpha Cine Service, Limited, 1195 Richards Street.

Alan Gordon Succumbs

Alan Gordon, 53-year-old president of Alan Gordon Enterprises Inc. and a prominent behind-the-scenes film industry figure for three decades, died suddenly on March 6 of an apparent

heart seizure in Escondido, California.

Since suffering a coronary mid-1967 Gordon had assigned

the activities of the company had formed in 1946 to its management staff.

Gordon attracted national attention during the post-war years by developing his small, one-man motion picture equipment company into a multi-million dollar colossus which numbered among its clients the U. S. Navy, Force and major motion picture studios throughout the world.

shattering look . . .

from page 37

"The judge . . . facing an increasingly crowded calendar, has little choice but to dispose of cases before him as rapidly as possible."

jails . . . and through their gates pass each year over three and one-half million men, women and children.

"The jail has two traditional functions — to confine those whom the courts have sentenced to a short term of imprisonment . . . usually less than a year . . . and . . . to hold those awaiting trial.

"More than half of all our jails are over fifty years old.

"In an atmosphere of idleness there is time only for deterioration . . . for talking and learning more about crime . . . time to become more degraded . . . and to lose what remaining self-respect a person may have.

"The jail offers *nothing* of value and much that is destructive . . . it is a fertile breeding ground for the criminal."

In one powerful sequence, an eighteen-year old prostitute moves through the Denver court's 24-hour diagnostic clinic as an example of some new solutions to the situation.

The Revolving Door is exceptional not only for the impact and honesty of the naked truth it reveals, but the cinematic artistry with which it presents its horrifying and urgent message.

Nothing was staged or rehearsed. The endless line of humanity flows past the judge's bench and on to countless barren jail cells — and the futility and failure of the system is layed bare.

The film begins and ends with the booking and jailing of old vagrant alcoholics who lie untouched in their dirty cells, are released in a few days, only to be arrested and jailed again. Thus, the *revolving door*.

The film is receiving the widest possible release through Sterling Films and the Foundation.

A Name with a Purpose

The objectives of Comprehensive Service Corporation are, as the name implies, to render the most comprehensive and satisfying service, with complete understanding of the needs of all who require motion picture equipment, accessories and supplies.

We point with pride to our long list of large and small customers all over the world, who have been coming to us, again and again, over the many years. Our ever expanding business is proof of their confidence in the quality of our products, our dependability and expert knowledge.

Dallas Production Grows, Two New Firms Open

The burgeoning film industry in Dallas, Texas is reflected with the recent opening of two new production firms there.

Century Studios has begun production at 4519 Maple Ave., headed by executive producers Johnny Beasley and S. F. (Brownie) Brownrigg, both vet-

BROWNRIGG **BEASLEY**

erans in the Dallas film industry. The firm plans specialization in the creation of business and industrial films, TV shows and commercials, filmstrip and slide production, and consultation services.

Century is the latest division of Lane Industries, Inc., and has

shown impressive starting strength with initial productions for LTV, Pennyrich, Frito-Lay, Munsingwear, Shawnee Mills and

The Film Shop principals: William Rogers, Jim Ferguson and Bill Bracken.

the Texas Department of Public Safety.

Boasting a fresh approach to the concept of business communications, The Film Shop has opened its doors at 3104 Fairmount. Principals of the new organization are William Rogers, Bill Bracken and Jim Ferguson, also all veterans of the Dallas scene.

Rogers, The Film Shop president, says the firm has been organized into a small service-oriented group that believes in the exploitation of ideas and that it intends to remain a personalized organization, offering flexibility and person-to-person contact with commercial concerns, industrial companies and advertising agencies.

Alpha Cine Services Opens Vancouver Lab

Alpha Cine Services Ltd., a new motion picture film processing laboratory, has been opened at 1195 Richards Street, Vancouver 2, B.C., Canada, by George Harvey and Les Davis, owners of Alpha Cine Supply, Seattle, and Alpha Cine Laboratories, Seattle and Spokane, Wash. Ralph Umarger, a veteran of 25 years in the motion picture business in the Pacific Northwest, is manager and part owner of the new facility; until recently he was production manager for King Screen Productions, Seattle.

The plant's 5,000 square feet of floor area provide for growth, and already house \$150,000 worth of new processing and printing equipment. Capability includes 16mm black and white negative, positive and reversal, using a special developer for negative/positive sound tracks. 16mm Ektachrome Commercial and the high-speed Ektachrome films are processed, with printing done on a new Bell & Howell Model C color-additive printer.

Color and black and white processing and printing of 35mm w added early in May.

More than 150 producer cameramen, and users of audiovisual materials toured the plant at a preview open house.

Color Center Hosts New York NVCA Group

Members of the National Visual Communications Association meeting for the regular month convocation in New York, visited the new facilities of The Color Center, Inc. on March 19th.

The tour, which was hosted by Color Center's President, Bernie Barnett, took about 40 NVCA members and guests through the company's new computerized and automated facilities for servicing visual communications producers.

Six production areas were visited in the two-hour tour among the Color Center's 89-room complex: Animation, Optical Effects, Filmstrip and Slidefilm, Photography, Color and Quality Control, Laboratory Services and Release Print Services.

NVCA members listen to Color Center President Bernie Barnett explain new methods of release print preparation.

us: The

America is in better shape today.

Thanks to Prudential...

...and its physical fitness films.

No company is more concerned with our nation's health than the Prudential Insurance Company of America. And no company is more aware that regular exercise can help us live healthier, happier lives.

That's why Prudential wants young people to get an early start on their fitness and conditioning program. To encourage them, the company is sending top sports stars to classrooms all over the country. On film.

Famous athletes such as Carl Yastrzemski, Gale Sayers, Bob Gibson, Hank Aaron, and Bob Hayes are giving millions of students all kinds of valuable

football and baseball tips. They're also teaching these youngsters how to stay in shape, and why exercise is so important to their future.

Prudential produced both of its exciting films as a public service, in cooperation with the President's Council on Physical Fitness. With each film, Prudential offers a supply of fitness books, free of charge.

To make sure their message reaches the largest possible student audience, Prudential called in another "pro." Modern. The world's largest distributor of sponsored films. If you think we can add strength to *your* team, call or write today for more information.

How to recognize genuine
Arriflex factory mounted
zoom lenses

Standard mount
is black anodized—
with ARRIFLEX
engraved trademark.

Heavy duty mount
is natural steel—
too hard for
trademark engraving.

in its continuing strive for perfection:

ARRIFLEX® presents the new heavy duty steel bayonet lens mount with matching lens socket in a new turret now on all Arriflex 16 and 35 cameras

The new popular high-performance zoom lenses have solved a lot of cinematic problems—but they created a few, too. Their ability to produce a high-resolution, high definition image depends upon their ability to be correctly seated in relation to the focal plane—focal flange distance, optical alignment and precise centering are, as always, critical. Yet, because of the length and heavy weight of these lenses, maintaining proper seating could be done only with brackets or cradles—which, in turn, added weight and bulk, and made quick lens changes impossible. The new Arriflex heavy-duty Bayonet-Lock lens mount and matching turret have been designed to solve these problems in the most efficient way: to assure precise seating without the encumbrance of extra equipment.

Now the most popular zoom lenses such as 12.5/75mm, 9.5/95mm, 12/120mm and 12/240mm Angenieux and 12.4/75mm Vario Sonnar for Arriflex 16, and 35/140mm and 25/250mm Angenieux for Arriflex 35 will be available with factory installed heavy duty mounts. Other heavy and long lenses such as telephoto or retrofocus wide angles will similarly be equipped at a later time.

TECHNICAL DETAILS:

The new heavy duty bayonet, as well as its matching lens socket are made of extra hard specially fabricated steel castings and machined within closest tolerances. This assures precise and lasting lens seating and alignment for heavy and long lenses, such as zoom optics. Wear of lens mount and socket is practically eliminated. Only one lens socket on each three lens turret is such equipped. A new lock is now also built into each turret on the opposite side of the heavy duty socket. This lock not only arrests turret but also serves to relieve further strain on the entire turret when heavy lenses are mounted. Lenses with standard Arriflex mount can be inserted into the new heavy duty socket in the conventional way. Conversely, lenses with heavy duty Arriflex mount will not fit into standard lens sockets.

NAVA Selling Institute Slated July 13-17

The National Audio-Visual Association will hold its 21st annual National Institute for Audio-Visual Selling July 13-17 at the campus at Indiana University.

Participants this year have a choice of seven regularly scheduled courses, and may participate in a special Religious Market course. Stronger emphasis also has been placed on "A-V Design Engineering" by adding an extra day to the course.

Additional details and reservation information may be obtained from A. L. LaCom, National Audio-Visual Association, 3150 Spring St., Fairfax, Va. 22030.

Audio Adds Montreal to Canadian Production Net

Audio Productions of New York and California, which last year extended operations into

English-speaking Canada through formation of Drege-Audio, Ltd., in Toronto, has moved into the French-speaking area by combining two Montreal production companies, Omega Productions, Inc., and Stellart, Ltd., into one, Stellart-Drege-Audio.

Drege-Audio, Ltd., headed up by Heinz Drege, and Stellart-Drege-Audio, chiefed by Bob Harwood, reportedly completes Audio's northward expansion program.

International Industrial Festival November 12-16

This year's International Industrial Film Festival will take place in Berlin from 12th to 16th November, 1969. This date has just been set by the Council of European Industrial Federations which is the organizing body for this Festival.

Hosts in Berlin will be the

Bundesvereinigung der Deutschen Arbeitgeberverbände and the Bundesverband der Deutschen Industrie.

Additional information about the festival is available from CINE, 1201 Sixteenth St. N.W., Washington, D.C. 20036.

Guild Plans Training Program for Directors

A training program for motion picture assistant directors will begin this Fall according to Ernest Ricca, Directors Guild of America executive secretary.

The program will be administered by a Board of Trustees representing the Directors Guild and the employers in the film industry.

Applicants accepted after testing will be placed with industrial film producers, TV commercial production companies and possibly in live television production.

Announcement of the program

marks the first instance of an organized plan toward the impartial selection of apprentices eventually resulting in union or guild membership.

Each trainee in the program will work in several production areas by the end of his two-year program and will be paid by the hiring employer at each place of employment. At the end of training each participant will be accepted into the DGA as a First 2nd Assistant Director.

Filmmaker Harry Olesker Killed in Accident

Harry Olesker, president of Harry Olesker Productions, Inc., New York, died on April 12 when his motorcycle and an automobile collided in Roslyn, N.Y. He was 46 years old and lived at 118 Riverside Drive, New York.

Mr. Olesker graduated from *Continued on page*

City College of New York and received a master's degree from Columbia University. In World War II he served in Army Intelligence.

He began his career as a radio script writer for station WOR, and later was a television producer for the National Broadcasting Company and the Columbia Broadcasting System. From 1963 to 1968 he directed radio and film production for the American Cancer Society.

Mr. Olesker started his own production firm in 1968, and had recently completed two major films for the American Cancer Society: *Crusade*, and *The Odyssey of Dr. Pap*.

Surviving are his widow, the former Elaine Breslof; two daughters, Jill and Elizabeth; and a brother, Max.

Novo Industrial Acquiring Strauss Productions

Novo Industrial Corporation has reached an agreement to acquire Henry Strauss Productions,

Inc., it was announced today by Chester M. Ross, president of Novo.

The transaction calls for the exchange of an undisclosed number of shares.

Chicago's Hilton Site of Largest NAVA Convention

The 30th Annual Convention and Exhibit of the National Audio-Visual Association at the Conrad Hilton Hotel, Chicago, July 19-22, will be the biggest in NAVA's history. According to NAVA President John C. Ellingson, Inland Audio Visual Co., Spokane, "All available space in the Conrad Hilton's three exhibit halls — the largest such hotel facility in the nation — has been assigned to more than 200 suppliers to the industry who will display products ranging from the latest in A-V materials and film and slide projection equipment to the newest in student response, and remote access retrieval systems."

"30 Years of Service" is the theme being observed this year by the Association, which serves a membership of about 1,000.

The Convention program features a full schedule of business events including a meeting of the NAVA Board of Directors and meetings of each of the seven councils within the Association which serve the varied needs of its members. Suppliers will also hold sales meetings for their dealers throughout the four days.

Affiliated groups and others with interests linked to those of NAVA have scheduled sessions during the Convention. They include the National Audio-Visual Association of Canada, the A-V Conference of Medical and Allied Sciences, the A-V Education Forum, and the Industrial Audio-Visual Association.

Graphic Consultants for Metro/Kalvar in Canada

Graphic Consultants, Ltd., has been named exclusive distributor of Metro/Kalvar photographic products in Canada.

Greg Hoy, president of Graphic Consultants, described how his company planned to use Metro/

Kalvar motion picture film a equipment in the reproduction a 2500-reel library of silent film originally made between 18 and 1930. The library is reported to be the largest collection filmed Canadiana in existence. Hoy said that Graphic Consultants would move into new office at 181 Belsize Drive, Toronto on July 1 and that a Metro/Kalvar printing-processing service would be established thereafter.

On-Site Services Offered During Japan Exposition

William Szabo, president of Will Szabo Associates Ltd., reports his firm will be offering on-site engineering and supervisory services relating to audio-visual systems design, installation and operation.

Currently engaged as AV consultant for the United States Pavilion, Expo 70, "Will" is well known for his extensive work at Expo 67 in Montreal, at HemisFair 68 and will visit Japan during 1969 and personally direct operations in Osaka during February-March 1970.

LOW COST, READY TO USE BACKGROUND SCENERY

Inexpensive, pre-fabricated scenic backgrounds are now available for motion picture production. No longer is it necessary to plan on spending large amounts of time and money constructing sets in the conventional manner. With our pre-built, completely realistic scenic units, all components needed for any set are available in ready to use 4' x 8' panels. All you have to do is prop them up and start shooting. For example, that solid oak paneling you see in the photograph isn't really genuine but you'd never know it. That set was put together in less than an hour... by one man! We call it "instant scenery" but on camera, the look is completely authentic and just imagine the potential savings in manpower and budgets.

We have a whole collection of different backgrounds available, all equally as realistic. English, Italian, Spanish and French panelings, brick walls, fieldstone, logs, shingles, roof tiles and barnwood siding are just a few of the many settings we supply. Each unit is a *fully dimensioned, precisely detailed* replica of the real thing hand painted in true to life colors. If your company needs authentic but inexpensive scenery that sets up in a hurry, and is also easily stored, just check with us. Chances are, we've already got it made up for you.

DYNALENS: at the CAMERA MART

DYNALENS COMPENSATED.

WITHOUT DYNALENS.

The Dynalens allows the cinematographer to shoot stabilized pictures even though the camera is hand held or mounted on a vibrating surface. It can be used with 16 or 35mm cameras with zoom or fixed focus lenses.

Of special importance is the fact that the Dynalens will provide image stabilization in motor boats, cars, trucks and helicopters. The Dynalens is available in several series for various power supplies: AC; belt-type battery supply; and a completely portable system.

Persons requiring additional information are invited to call or write Mr. Tony Cirillo of the camera rental department: 212-757-6977.

Camera Mart Names Wohl to Sales Post

Jeffrey A. Wohl's recent appointment as an assistant to the director of government and industrial sales for The Camera Mart and related companies was necessitated as a result of the company's expanding role as supplier to both governmental agencies and private industry.

Weston Heads Commercial Production Marketing

Commercial Productions Inc., Seattle based audio-visual production firm, has announced the appointment of Greg L. Weston as marketing director. Weston brings to Commercial a diversified executive management background in the advertising and public relations field, and plans to shortly introduce a new concept in audio-visual marketing.

A-V Post for Taylor at Bozell & Jacobs

Thomas T. Taylor has joined the Tacoma, Washington office of Bozell & Jacobs, Inc. as director of communications services with responsibility for the creation and production of films, slide presentations and other audio/visual services.

Multi-Media Specialist Joins Cine Communicators

Herbert Nettleton has been appointed coordinator of the multi-media division of Cine Communicators. Well known in the audio-visual field for his introduction of show business techniques in education and business as well as his work in planning multi-media installations for The White House, The Pentagon, and others around the world, Nettleton successfully pioneered new concepts in multi-media and divided screen techniques so that slides, film-

strips, movies, live and tape closed circuit television could be shown to audiences simultaneously on one or more screens.

Gillette Heads Graflex A-V Product Sales

Graflex, Inc. has promoted Patrick V. Gillette to national sales manager of audiovisual products.

Prior to his recent promotion Gillette served as a Graflex district sales manager and has been with the company since 1953 in sales and administrative positions.

Gamerman Named VP A-V International

Kenneth Gamerman, newly appointed vice president of Audio Visual International, has had a most impressive career as executive editor of the Social studies division Encyclopedia Britannica, and is the author of widely published articles on audio-visual education and social studies appearing in the New York Times and National Geographic.

Gunn, Baigelman to New Technicolor Posts

Technicolor, Inc. has appointed F. George Gunn as the president's personal representative for customer liaison in Europe. Gunn, who recently retired as sales director of Technicolor Limited, joined the firm in 1936 and established the London camera department introducing color photography in the studios.

Jack Baigelman has been promoted to the newly created post of national audio visual sales manager for the Commercial and Educational Division of Technicolor, with home offices in Costa Mesa, Calif.

Duncan Audio/Visual Names O'Malley Vice Pres.

Martin J. O'Malley, eastern manager of Audiscan, Inc., Bellevue, Washington, has been named director and executive vice president of Duncan Audio/Visual Inc. of Rochester, New York. A veteran of 28 years in the photographic field, O'Malley will operate from the firm's New York City office and will be in charge of marketing filmstrip series on patient education for the medical profession in addition to his management duties.

O'Brion Now Sony's National Sales Manager

Responsibility for the marketing of Sony Corporation of America's video equipment has been assigned to Richard F. O'Brion, recently named national sales manager. Previously, O'Brion served as eastern sales manager of Sony's VTR Division and as national sales manager of the company's consumer VTR department.

Kuechenmeister to Kalart Manager of Marketing

Karl M. Kuchenmeister has been appointed to the position of manager of marketing for The Kalart Company, Inc., with responsibility for the coordination of all marketing activities of the company with emphasis on product planning and new production introductions.

Calvin Communications Promotes Three

Three key Calvin Communications, Inc. executives have been promoted to new vice-president positions within the company.

Larry A. Kauffman has been given responsibility for all corporate sales, marketing and client contact activities. Kauffman, with Calvin since 1956, has worked as assistant operations manager, writer, director, producer, and most recently, as director of marketing.

Named vice-president in charge of all creative production functions was James E. Moore who formerly held the post of production manager. Moore, with 12 years of Calvin service, formerly worked at Raphael G. Wolff Productions in Hollywood.

Promoted also was Donald S. Phillips who, as a new Calvin vice-president, will head the coordination of all administrative activities at Calvin locations in Kansas City, Independence, Mo., Louisville, Kentucky and Philadelphia, Pa. Formerly Calvin's assistant general manager, Phillips advanced from producer-director to manager of the contract division to manager of administrative services and has 8 years of Calvin service.

Around the Industry . . .

Robert S. Fisher has joined the staff of Fred A. Niles Communi-

cations Centers, Inc. as an account executive and will spend his time between Detroit and the Niles headquarters in Chicago. Peter J. Rabow will be assuming the position of producer of the Reela Films educational film series originally established by Milton Kley, who, after an extended leave, will return to Reela as associate producer. . . . William Macdonnell has been named manager of Birns & Sawyer in England and will represent the Oceanographic and Motion Picture division. . . . Five newly created marketing divisions of Birns & Sawyer are headed by Maurice Perault, Paris; Dr. Ernest Hunger, Germany; Max Vlioger, Holland; John V. Brown, Australia and F.W.L. Meade, Hong Kong. . . . Frank J. Kiehl is newly named manager, in charge of development for the Education and Training Group of The Singer Company. . . . Du Art has appointed Paul Jaeger general manager of their new sound department. . . . Lloyd C. Nickerson has joined Muller Jordan Healy as a producer in the audio-visual department. . . . Craig Corporation has expanded its marketing staff, appointing Arden (Art) Batchelder, Jr., and Robert Howe as product managers. The Graflex Division of The Singer Company has William Williams as Manager, International Marketing responsible for international sales and coordinating marketing activities with overseas dealer-distributors. . . . Audiovisual Systems Manager of Graflex is Charles F. Dailey. James P. Smith has joined the head office of Wells Fargo Bank Training Department as a motion picture producer. . . . B. Oyen is now with Teletronics International, Inc. as a sales representative. . . . The new Creative Director of Animation at Ele Film Productions is Karl Fisher. . . . Kenneth N. McClure has been appointed as advertising and promotion manager of Cylon Films of Arizona, Inc. Sony has appointed Richard Lucius senior field engineer special projects, video production. . . . Howard S. Perrill has been elected vice president-treasurer of Novo Industrial Corporation, a multi-market service company with major concentrations in freight. . . . Novo has appointed Charles E. Glanzer to the newly created post of assistant general counsel. . . . American Oil has named Jack Peterson general manager public relations.

PUT YOUR FILMS TO WORK

THE BATTLE FOR MEN'S MINDS will not be won by ignoring the shouts of the protesters, whether on our city streets or on college campus grounds. While those who find fertile ground among the young for anarchy and violence *are being heard*, the voices of reason and logic too often remain muted or silent. It may not be too late to consider alternatives but it's much later than those endorsed in the executive suites might like to think.

Viet Nam, poverty, decaying cities, pollution and the myriad of other problems aren't going to disappear. And business, at home and abroad, should listen carefully to such concepts as the one recently advanced by sociologist Arthur I. Waskow, a fellow at the Institute for Policy Studies in Washington, D.C., who recently told a Northern Illinois University conference on "charting the corporate course into the 21st century."

"Today's college protesters soon may join the labor force and demand a voice in running their employers' businesses . . . the 'new employee' may read the writings of business critic Ralph Nader and decide that we don't want to make cars that kill people."

Or the businessman might well take a careful look at a disturbing new documentary motion picture, *American Revolution: 2*, which presents, for all its disjointed and incoherent images, a frightening view of an American city as the breeding ground for violence. Police are "pigs", guns are the only answer to the "system" and Black Panther agents encourage the lost sons of white Southern "rednecks" to take up their revolutionary cause.

If all this sounds far-fetched, with an "Alice in Wonderland" aspect, take an evening stroll out on the ghetto pavements or in your city park. But understand this: that "other side" has *dedicated leadership*. It counts *idealists*, misguided or not, within its ranks. And how many campus rebels are finding inspiration in the conglomeration of unrelated businesses, "bigness" for its own sake?

Must the cause of truth and understanding go unserved? Consider carefully *all* the tools now at our command and *still unused* to a very great extent. In these months of the crises of ignorance, "the greatest tool for putting ideas into men's heads" as a wise business man once called the informational, factual motion picture, *must be put to work*.

This medium has some very real asset worth recounting. First and foremost are the skills possessed by hundreds of specializing producers of factual films throughout the land and abroad. Ideas abound and people capable of bringing them into vivid reality are at hand.

And when these films are created, the means of reaching youth are dependable, accountable and far-reaching. Hundreds of commercial and educational television stations await genuinely interesting, factual motion pictures for countless hours of available "public service" time. Theaters, a favorite gathering place for young people, are accepting and running sponsored short subjects. Hundreds of thousands of 16mm sound motion picture projectors in the schools, churches, union halls, lodges, clubs and throughout the American community look to sponsored film distributors for daily and nightly film fare of this kind.

Films are ideally suited to "discussion" meetings, become "thought starters" that generate ideas talked about in open forums.

What you can do about all this is also stimulated by some recent examples from within the American business community films which get to the heart of "problems" and opportunities, produced with consummate skill by professionals who knew what they were doing. Let's briefly comment on a thought-provoking group of just three recent sponsored motion pictures:

1. *How do you recruit those vitally important young leaders of the future on the college campus?* Boise-Cascade Corporation is meeting that challenge with a very different 28-minute 16mm color film. *The Significance of You*, produced by deMartin-Marona & Associates. This film uses a "free-form" concept to make contact with very sophisticated campus audiences; it portrays Boise-Cascade as a creative, youthful, vigorous and dynamic company worthy of career consideration.

2. *You're putting a new steel plant in the heart of a previously undeveloped part of rural America, looking for labor to man the production lines, conscious of your role in an entirely new community.*

Jones & Laughlin has a new motion picture, titled *Symbiosis: the Land, Its People and Industry*. This film let the people who live in its Hennepin, Illinois plant area tell the story through honest, factual appraisal.

of their declining economic future on small farms, in the towns.

Of course this new steel plant earned the recorded impression of a job-seeking visitor who exclaims: "Why it looks like a space center!" But they also showed concern and provided acceptable answers to air and water pollution questions that abound today. The combination: honest reportage of the plant and its leadership, brought to the screen with truly professional skill by the Chicago film

makers, Jack Lieb Productions.

3. *How well do Americans and people abroad understand the importance of international cooperation, especially as it relates to world trade?*

The most recent and one of the best films to take on this important subject is *A Gathering of One*, sponsored and distributed by IBM World Trade Corporation. Its theme: that in today's technical age, mankind has at its command tremendous capabilities as well as the ageless power of human ingenuity. This film then explores man's constant quest for progress and the importance of international cooperation in meeting these challenges.

Producer Henry Strauss has the kind "feeling" and the experience to make *Gathering of One* an exciting venture in the hope of tomorrow's world. World Trade manager of audio-visual services, Jim D mon has the courage and understanding essential to getting this kind of message on the screen, in the U.S. and abroad.

The key word remains "hope" and the future of American business depends on believing it, telling its story "like it really is" and using this tremendous sight/sound medium to encourage and inspire the youth of America and of all lands wherever we can get the story told.

IAVA Spring Meeting "Prepares for Tomorrow"

MORE THAN 80 communications specialists from corporations throughout the country met at the University of Chicago in April to study industry's future communications needs. The Industrial Audio-Visual Association spring meeting examined some of the solutions offered by the audio-visual media.

Keynote of the meeting was Morton Goldsholl of Goldsholl Design Associates in Chicago. Goldsholl who had won an eminent place in the field of design in the audio-visual media emphasized that the quality of the

ideas generated by a-v communications specialists was more important than hardware and sophisticated techniques of presentation. Said Goldsholl: "Form and content are one. They are inseparable. But audio-visual men tend to substitute thirteen screens and a multi-media extravaganza for sound ideas. I beg of you to think clearly and remember that what you say is of the utmost importance in our world today. Do not sacrifice content to form."

IAVA's president, Frank Stedronsky (A. B. Dick Company) told the conferees: "I see the day when every classroom in America will be equipped with a television set and a dial retrieval system that will permit the instant replay of a virtually unlimited library of educational materials in an audio-visual form. The consequent impact of this material is certain to revolutionize teaching methodology. As a result, millions of young people will grow up in an environment in which diverse audio-visual tools will be as common-

place as blackboards and chalk."

Hubert Wilkie of Hubert Wilkie, Inc., Communications Facilities Consultants of New York City said that the need for rapid and effective communication of facts and ideas in industry was recognized.

Wilkie offered a series of case histories of successful solutions to communications problems by taking advantage of the latest technological advances in meeting room design. But, said Wilkie, too many new buildings and meeting rooms were not designed for the convenient and effective use of audio-visual aids to communication. This hinders executive efficiency in industry. Unfortunately, it was unusual for architectural design to be influenced by the people who were to use the facilities. The only answer was to bring about a closer understanding between the communicators, the administrators who control decisions and their advisers.

Robinson P. Rigg, of Robinson P. Rigg Associates, Communications Consultants of London, England reminded the meeting that of the U.S. companies represented, nearly 50 were engaged in direct trade with customers in Europe, through subsidiaries or agencies. He explained the need to tailor the message and its form to the particular requirements of each buying group, in each area of operations. The films currently being made to communicate industrial messages in Britain differed from those on the continent of Europe, in that they were designed more to present specific messages to designated audiences than to entertain mass audiences. In cer-

tain communications areas British management applied market research principles to audio-visual media similar to those used to evaluate press and TV. The term 'cost per visual impression' was becoming significant in planning A-V media.

Program Chairman Mike Ritt (Combined Insurance Company of America), ably assisted by Marshall Wayne and John Hawkinson also presented an impressive array of new technical developments for the meeting.

Among those examined during the meeting was the CBS-Motorola Electronic Video Recording system; the 3M Company's electron beam recording system for transferring programs onto 16mm film; Triangle Publications' new Educating program; the 3M Sound-on-Slide system; and a number of new Eastman Kodak products including the Visualmaker; a filmstrip adapter for the Carousel and a Super 8 stop-action projector.

A feature of the convention was a series of seminar workshops at which there was an interchange of problem-solving ideas among the audio-visual specialists.

The following officers were elected at the meeting: President: William Walton, I.B.M.; First vice president: Lee Coyle, Ohio Bell Telephone Company; Second vice president: Gerry Hall, National Cash Register; vice president Illinois: Robert McCaslin, Caterpillar Tractor; Secretary: Hal Read, Liberty Mutual Insurance Company. Executive Secretary is Fred Woldt of Waukegan, Illinois. The next meeting of the Association would be in Philadelphia, Pennsylvania, 14-17 October 1969.

I.A.V.A. "HERE COMES TOMORROW"

Keynote speaker Mort Goldsholl kicked off the spring meeting themed "Here comes tomorrow . . . get ready today."

NEW IAVA OFFICERS: (l. to r.) Hal Read, secretary; Bob McCaslin, vice president-Illinois; Lee Coyle, first vice president; Bill Walton, president; Fred Woldt, executive secretary; Frank Stedronsky, past president; and Gerry Hall, second vice president.

Training, Selling with Single Concept Loops

ONCE UPON a time, when you said your battery was dead, you meant your automobile — not your toothbrush!

But times are changing and it's difficult to keep up on new products and techniques available in the marketplace. Once, paint was paint and you applied it with a brush. Today's paint products are legion and varied application techniques compound the confusion.

George Adsitt, marketing vice president of Bestt Rollr, Inc., of Fond du Lac, Wisconsin, realized his company faced this problem. Many salesmen couldn't keep pace with new techniques.

"The rapid development of paint technology," said Adsitt, "places a heavy burden on the salesman to keep up with paint application knowledge."

Some form of indoctrination was needed. Allied International Films of Crystal Lake, Ill., suggested that Bestt Rollr use 8mm single concept films. This type of

film, which has been immensely successful in education, is a short film loop, usually under four minutes in length, that deals with only one specialized topic. Instead of developing one long film to cover all topics, a handful of short single concept loops are produced, allowing the salesman to select the one that is appropriate in any given situation without screening a half-hour of irrelevant film and wasting customers' time! The films were produced for use in the Technicolor 810Z Instant Movie Projector, a minute, 9-lb. desk top projector. A still-picture clutch freezes the action on any frame and, because the film is in a cartridge, no threading is required.

Allied International has been very active in this new approach to training and sales indoctrination. Specializing in a packaged approach, Allied International motion picture programs include market research, market development, sales management consult-

ing, public relations and film production. The firm has complete production facilities at Crystal Lake, Ill., including sound stages, recording studios and edition rooms. For more than ten years, Allied International has specialized in low budget, single concept marketing motion pictures and has been one of the leaders in the utilization of motion pictures in integrated selling and point of purchase merchandising programs.

"With the Allied International concept," said Adsitt, "it is like taking all of our accounts in the United States into our factory and giving them an indoctrination on how to do a painting job with the right tools and the right products. Through motion pictures we are able to accomplish this educational job at a far lower investment than through any other means.

"With our film program, we can show in action and in color what our products are capable of doing and our message is presented quickly and to the point at the buyer's desk. The films will be available for painter contractor and dealer meetings, and will be available for dealers for use in training the personnel.

"In today's selling, it is a major problem to provide sales clerks with proper knowledge needed to keep abreast with the

Elinor DeMunn, director of production, Allied International Films, demonstrates the simplicity of cartridge film and the Technicolor 810X super 8 Instant Movie Projector to George Adsitt, Vice President, Marketing of Bestt Rollr, Inc. of Fond du Lac, Wisconsin.

new developments within our industry. Motion pictures utilizing the power of sight and sound are able to quickly and effectively train personnel in selling the right tool as recommended for a particular painting condition. This simplifies the selling problem and is assurance that products will be sold to do the job they were manufactured to perform."

Reid Ray CINE President; Three New Board Members

CINE, the Council on International Nontheatrical Events, re-elected Reid H. Ray, well known Midwest film producer, to his second term as president.

Other newly elected officers were Willis H. Pratt, Jr., vice president for information, and O. S. Knudsen, secretary. Pratt, who is film and closed-circuit TV director for American Telephone & Telegraph Co., New York City, served two terms as CINE presi-

dent from 1964 to 1966. Knudsen heads the Motion Picture Department at Iowa State University in Ames.

Three men were added to the board of directors: David Shefrin, manager of television activities of IBM, Armonk, New York. Shefrin recently left the television production field to join IBM.

Second board member is Henry Herx, executive secretary Na-

tional Center for Film Study, affiliated with the National Catholic office for Motion Pictures in New York City.

Third board member is James Damon who heads IBM World Trade Corporation's film operations. Damon, a well-known industrial film executive, is based in New York City.

Officers re-elected included Peter Cott, TV Academy executive, as first vice president; other

vice presidents—Charles A. Belmont, president of Filmscope, New York; Charles Dana Bennett, Farm Film Foundation, Washington; O. H. Coelln, founder of BUSINESS SCREEN magazine, Chicago; Ralph Creer, American Medical Association, Chicago; Dr. Anna L. Hyer, executive secretary Dept. of Educational Technology, National Education Association, Washington; Emily S. Jones, executive secretary of the Educational Film Library Association, New York City; and the Rev. David O. Poindexter, National Council of Churches, New York City.

Re-elected as treasurer was Alfred E. Bruch, president of Capital Film Laboratories, Washington.

Dr. Harold E. Wigren, National Education Association television consultant, was again chosen as CINE's coordinating director. Managing director is James H. Culver, who heads CINE's Washington-based staff.

video tape: past, present & future ...

continued

larged and devices such as aperture correction and highlight equalizers were designed to enhance the picture being displayed. Improved film emulsions came on the market.

In those days, tape-to-film transfer requests came mainly from foreign markets and smaller TV outlets. Different technical television standards in the foreign markets necessitated the transfer to film; in the domestic market, smaller film-oriented television stations, with minimal or no tape handling gear, also required film.

Today, even though the black and white video tape to film transfer process is basically the same as the kinescope process, the results cannot be compared with the early days. "Saying a kine is still a kine is like saying

a pre-WWII radial-engine airplane is the same as a modern 707 jet because they both depend on wings to stay in the air," Sawelson is fond of saying.

Competition brought improvement

He feels competition caused the vast improvement in black and white tape to film transfers between 1959-1964. "Everyone in the industry was working within the same perimeter and dealing with the same elements, but using different approaches. Each firm had to continually improve its equipment and methods to compete."

Everything seemed to be coming up roses for the industry, for its firms and their clients.

Roses, that is, in glorious black and white.

It wasn't that the industry hadn't prepared for color. Even so, it was a shock when it came. Suddenly the nation turned around and overnight, found color on its doorstep.

Most of the original problems encountered in the early experiences with black and white transfers returned, giving engineers and producers nightmares and haunting them in their efforts to achieve good color film transfers. Again, they found they needed corrective playback devices like color drop out compensators, head velocity compensators, auto chroma, and so on.

But there were none. Not for color videotape.

Add to these equipment problems the attempts to achieve good color balance and suitable color emulsions for recording televised pictures, and the black and white film transfer process seemed like kindergarten in comparison.

Sawelson says that his firm approached the problem of color registration and balance with the Triniscope process. After two and one half years ("of learning what not to do"),

it was abandoned, eventually to be replaced with a method of electronic separation that led to the Acme-Chroma process of color film transfers.

Ten years ago, when Acme installed videotape machines to generate film work, the entire industry hardly fathomed the idea that tape transfers would gain a wide following. But since then, the industry has adopted tape, especially in post production, where it can be more workable and less expensive than film.

Today, film to tape transfers are proving successful in the TV program syndication field. Film prints are often replaced with videotape dub made from a 35mm color composite print. Tape insures each station with the kind of quality expected on a network because tape equipment and set up procedure is nearly the same, playback does not vary.

This is in direct contrast to 16mm color prints that, in fact, still circulate among television stations. Playback quality often varies dependent on the physical condition of each individual print, quality of the station's color film chain, and skill of the video engineer riding the controls.

Transferring a new 35mm color composite print to video tape and syndicating the series with tape dubs rather than with film print actually costs less than making 16mm color prints. "A videotape dub will give approximately 40 plays. The life expectancy of 16mm color film print is between 10 and 15 plays," Sawelson said.

The volume of film to tape transfers that pass through videotape laboratories each week testifies to the truth in his words. Approximately 50 per cent of all television station programming operations involve the use of videotape recordings and playback.

While all videotape laboratories are capable of transferring film to tape, houses offering tape to film transfers can be counted on one hand and are located almost exclusively in Los Angeles and New York City. Yet, some film personnel feel that the writing is on the wall (perhaps we should say screen) for the motion picture industry, just as it was for the television industry. Current use of electronic viewfinders on motion picture cameras for instant playback is just the first step towards an eventual tape takeover, they say.

Impossible to forecast

Sawelson, however, feels it is impossible to forecast what can happen in the coming 10 years. "We've already seen a 180 degree turn around, starting with tape to film transfers and reversing to film to tape transfers. Now both are in practice as accepted procedures. Perhaps the methods which we consider 'magic' today will be non-existent in the future, replaced by laser beam recording and other 'science fiction' predictions. Nothing's impossible.

"When something works, it works in many ways," Sawelson said, referring to the film-videotape combination. "Future uses of film and videotape are as limitless as the ascending arc of the state of the art."

Modern master control console for black & white tape to film transfers. (Acme Film & Videotape Laboratories photo).

Up-to-date kinescope operation, with recording unit in center, at CBS-TV studios in Hollywood. The network used this TV recording set-up in the early 1950's. (Reprinted by permission of the Regents of the University of California.)

Two Pixies, FEAR and DESIRE, present New Creative Selling concept in an original sales training program

New concept reduces all the factors which prevail in a selling situation to just two basic emotions — FEAR and DESIRE. Salesmen who know how to control these two emotions on the part of a buyer, usually make the sale.

"No, I wouldn't be interested", "Too busy", "Make it brief. I can only spare a few minutes." "Your price is too high. I can buy it cheaper." These are expressions buyers often use to get rid of salesmen they don't like to do business with. What is it these salesmen do or say which cause "FEAR" to influence what the buyer says? Is it a natural reaction to salesmen — or is it rather caused by the selling methods these salesmen use?

Everybody likes to buy

In spite of the resistance most salesmen meet from buyers, the truth is that basically people like to buy. If you ever doubted this — watch the look of joy on a woman's face when she buys a new hat or dress. And did you ever see a family who just bought a new home, who literally can't wait to move in and enjoy their new home? Just watch the new joy a family experiences with their new color T.V. or a new car.

Creative salesmen turn "desire" on

Creative salesmen know that people like to buy. When the same prospect or buyer who has just turned one salesman away is approached by a salesman who has learned how to sell creatively — he *will* buy. That's because the creative salesman has learned a method of selling that automatically *controls* FEAR and *stimulates* DESIRE.

For example, when a creative salesman

says to a buyer: "... and every \$1000 saved in maintenance is equivalent to \$20,000 in sales" — DESIRE would cause that buyer to think "Say, that's a darn good saving."

Or when a creative salesman says: "This line should create immediate sales, allow a faster turnover and bring more repeat business" — DESIRE is going to say: "Repeat business, eh. That sounds good."

The multiplier

This new course with modern audio-visual methods and detailed programming makes it possible to develop salesmen in branch offices as effectively as in home offices. It is designed to simultaneously *multiply* sales development wherever one wishes. It can even be self-administered as a home study course — and re-training becomes so easy.

Results sales managers dream about

With "FEAR" and "DESIRE" dramatizing key points so that they are memorable — the program shows salesmen how to call on customers with ideas that create need and desire for their products and services. It need no longer be just blue sky for those salesmen who have always wanted salesmen that brought prestige to the company they represented, the product or service they sold and to themselves as salesmen.

Any salesman can learn

Can this method of selling be learned? Better Selling Bureau, Burbank, California says "YES" — and has produced a sparkling, fresh and original sales training course co-starring "FEAR" and "DESIRE" appropriately titled The "Creative Selling" Program.

For the leader or trainer there is a completely programmed manual which details everything he is to do and say in conducting the fourteen one to two-hour sales seminars and workshop sessions. To communicate, innovate and motivate the trainees there are sound color filmstrips to show the attitudes and persuasive techniques of creative selling. The trainees also have kits which consist of the salesman's manual complete with a pictorial review of each subject plus quizzes, summaries, evaluations, graduation hats, pins and diplomas.

Subjects covered

The subjects explored in depth are: Creative Selling — The Attitude that Creates Business — What Do You Sell? — Are Prospects Different? — By-Passing Sales Resistance — Pride in Price — Close Isn't Closed.

Audio-visuals help understanding Rocket Pictures, Inc. with 29 years of experience in the audio-visual medium handle the film production. Their knowledgeable approach communicates this new selling concept clearly and simply, making it easy to understand, absorb and retain.

For complete information on "Creative Selling" contact Better Selling Bureau, 111 W. Olive Ave., Burbank, California 91506

87 JBL loudspeaker systems create 4-dimensional sound environment in Knott American Heritage Theater

History is brought to life on cue... ghosts of the Second Continental Congress convene in a reconstruction of Philadelphia's Independence Hall... cattle stampepe down a wild western street... the pageant of America unfolds in a theater that is virtually a total sound system. Visitors to famed Knott's Berry Farm forty miles southeast of Los Angeles are treated to banquet helpings of American history through one of the most sophisti-

cated, extensive, and complex audio installations yet assembled.

These sonic spectacles are the work of Philip Stuart, Hollywood producer of documentary films and exhibits. Stuart chose sound as his primary medium because it most readily fulfills the objectives of showman Walter Knott. A broad-band audio environment is created in a period architectural setting. The imagination is stimulated; the individual's own mind becomes the temporal instrument through which he rediscovers America.

Sound will completely surround and immerse spectators in the new American Heritage Theater. There are loudspeakers in the side walls, back wall ceiling, and even in the floor. Principal speaker systems behind three multi-projection screens were designed specifically for this application by Paul Veneklasen. Each system includes fifteen-inch JBL 140 low-frequency high-power transducers, two JBL 375 high-

Energized by more than 100 JBL two-channel amplifiers, the Wild West works, sings and rides again

selected for their exceptionally clean response, reliability and negligible degradation due to aging.

One leaves Independence Hall awed and solemn, but fun and excitement balance the American picture in the streets of Knott's Ghost Town. Here more than a hundred JBL SE408S two-channel amplifiers supply an endless series of effects to concealed loudspeakers.

Horses neigh in the livery stable while the anvil clangs in the smithy. Picks are heard in the mine. Cattle stampede down the street. A parade passes. And while funeral music wheezes from the undertaker's hearse at boot hill, bird calls twitter from the trees.

Yet the total effect is not one of carnival; the visitor feels uniquely privileged to re-live historical moments. The sincerity of the presentations is due to the taste and dedication of Walter Knott, a

firm believer in the worth of the American heritage, to the imagination and vision of producer Phil Stuart, and C. F. Lynne, Knott's Sound Department Engineer, and his preoccupation with the excellence of the installation. Through their efforts, a great dream has been transformed into a living reality.

Refinery Men Learn in Multi-Media Classrooms

Standard Oil's Richmond refinery uses four modern classrooms for continuous training to keep employees abreast of the ever changing operations and processes.

Accelerated learning program at the refinery uses several modern learning techniques. Students use responder system at their desks to answer questions like the one shown here.

IT TAKES a tanker a day to keep the giant Richmond, California refinery of Standard Oil Company of California on schedule producing more than 1,200 different products from 190,000 barrels of crude oil.

To operate the refinery, one of the world's largest and most complex, takes many skills—old skills that a new job applicant seldom possesses and new techniques that an old man may not yet have encountered.

"With the many automated processes and controls each man in the refinery has a more important role and controls more functions. There are fewer opportunities for a man to learn on the job," observes training director Philip Brubaker. "The safety of each of our 3,000 employees and our community neighbors depends upon every man understanding every element of his job and performing it exactly as prescribed."

To insure this, the Richmond refinery has its own school with four modern classrooms where 325 employees are always undergoing training. There are classes for new employees,

Each student is required to answer every question through the responder system, giving the instructor a quantitative picture of understanding.

apprentices, mechanics, maintenance men, process operators, head operators, and foremen.

Brubaker and his three training officers present the various course materials with the aid of an array of audio visual aids, including a Raytheon multi-media student response system.

The instructor has a master console that automatically synchronizes a specially prepared strip film and an accompanying tape recorded narration. Each student has a terminal with four push buttons at his desk.

After a key training point has been introduced on the screen the film and recorded track ask the students a pertinent question based on this information. The question is in multiple choice form presenting four possible answers: A, B, C, or D.

Each student presses the appropriate button to record his answer.

A counter in the instructor's console tallies the responses and four meters provide him with a quantitative report. For example, if the correct answer to a particular question was "C" and 17 out of the 22 men in the class indicated this answer, the instructor's "C" meter would read 75 per cent. The balance of incorrect choices would show as percentages of the total on the other meters.

If an unusually low percentage of the class selected the correct answer, the instructor could interrupt the automated lesson presentation and reinforce the point with personalized instruction.

Training specialist A. M. "Pat" Tibbetts said the system eliminates the immunity to questions common in the ordinary classroom. "An instructor can't call on every student and it is human nature to lose interest in a question as soon as you have determined that it's not directed at you. This traditional detachment, or 'recitation roulette,' is eliminated with the feed-back response system," said Tibbetts. "Every question is directed to every student and every student must answer. It

really keeps them alert and responsive."

Typical of the various subjects that have been programmed for 100 per cent student response are courses in pressure, controls, temperature, fluid levels and flow rates.

Instruction is divided into various segments to keep it moving and at a varied pace for added interest. A day in class usually alternates among live demonstrations, films and slides, lessons presented on the Raytheon responders, and printed programmed instruction material prepared by the American Petroleum Institute.

"It is difficult to measure the effectiveness of the new multi-media training program," explains Brubaker, "but the students like it and their foremen report that they're more valuable on the job after a week at the training center."

Answering questions posed on slide during training class, students press button at their desks to record their answers.

The videotape recording training gear is contained in small mobile van (right). Standard production system shown inside includes power supplies, editing equipment and videotape recorder.

Videotape Keystone of Training, Public Education

The Michigan Credit Union League is getting maximum use in both training and public information from its education and training programs. The League utilizes a variety of presentations to train employees and educate the public.

FULLY REALIZING that success depends largely on the effectiveness of communications, the Michigan Credit Union League is building an impressive institutional communications network centered around a mobile videotaping technique.

The Michigan Credit Union League is an association of credit unions established to assist individual credit unions with their operational problems, primarily in the field of savings and loans. It serves as a training organization of credit union staff, creates and protects enabling legislation, develops promotional materials for credit unions, sponsors a statewide advertising program through its public relations department, distributes a monthly publication and assists in improving the impoverished areas of primarily urban centers.

Future Michigan Credit Union League counselors receive instruction in counseling techniques. A wide range of audiovisual tools are used in MCUL's information program for employees and the public.

The League also supplies informational materials on credit unions to various school systems in the state and distributes consumer information on a wide range of subjects through community groups, universities, boards of education and credit union memberships.

Subjects ranging from individual training programs to a series of talk sessions featuring a popular Michigan television personality have been recorded on closed circuit videotape recorders at the League's education and training center in Southfield, Michigan.

"The videotape recording technique is proving to be an effective tool for industry in behavioral science studies which provide the understanding and appreciation of the individual so necessary in business today," according to Diedrich Reimer, edu-

cation specialist, who has headed the League's closed circuit television program since June, 1968. The closed circuit television program is sponsored by the Education and Training Section, directed by Robert Rodreick.

Reimer, together with a technician, travels throughout Michigan visiting many of the state's nearly 1200 credit unions with the League's portable "workshop": a van packed with an Ampex videotape recorder, television cameras, TV monitors, video tapes, slides, films and projectors. Reimer conducts what he calls "three-dimensional training clinics" which emphasize self-confrontation, self-analysis and self-improvement.

A typical training session lasts one or two days. Classes are kept small — between 10 and 15 people. Reimer begins with a slide presentation that deals solely with learning theory and behavior. It describes the learning process and traces the history of learning, according to Reimer, "back to the first time a barbarian discovered his own image in a pond."

"We recount this event every time a student, learning to perform a new task, practices his job for the closed circuit television camera and then views the replay. Since this is the beginning of a learning experience, the self-confrontation phase, the student, like the barbarian, may be quite surprised at what he sees."

Whether a student is taped individually performing a single

task, or in groups acting out simulated inter-personal situations, he is allowed to view the tape of himself in private. This is to avoid the public embarrassment that often comes with self-confrontation.

Slide or film presentations are then given to review preferred methods of carrying out the job being studied. Class discussion often follows.

The program is designed for all levels of office employees, as well as for high level executives with important responsibilities. All presentations follow a similar format. A receptionist being trained to answer the phone is presented with a variety of different situations, such as a hostile caller, during the initial taping. After being exposed to new ideas for handling these situations, her performance in similar situations is again taped and replayed for evaluation.

A management subject also assumes a role playing position in a situation he is likely to be confronted with on the job. Most often the situation deals with a complex personnel problem. After trying to mediate a conflict between two employees, for instance, the executive gains insight and ideas about the problem via the slide or film presentation, and at times a critique session. He then is confronted with a related problem in a second role playing session.

"We've learned through this program that too many of us in the credit unions and in American industry as a whole are pretty poor at dealing with other people," Reimer said. "But we do not realize how ineffective we are until we see ourselves. That's why recording the role playing session is so valuable. When our subjects view the replay, nearly

of them recognize the need for improvement."

Information presentations are another service provided by the League's education and training section. Aimed at the consumer public as well as credit union employees, the presentations are video taped dramatizations of such topics with the pitfalls of car buying, how to buy a home, what one should do in case of hold-up, and the significance of auto-in-lending legislation.

A 38-minute talk show moderated by Don Haney of Detroit's on Haney's People Show was recently taped at League training headquarters. Program participants were: R. C. Roberson, president of CUNA (Credit Union National Association) International, Inc., which represents credit unions throughout the world; Irett Ferris, retired general manager of the Detroit Teachers Credit Union, once the largest credit union in the world; Donald MacKinnon, president of the International Credit Union Services Corporate, an affiliate of CUNA International; and Richard Brown, manager of H.P.C. Credit Union in Alpena.

"The tape proved that we do not effectively explain our duties and advantages," Reimer said. "It was educational for all involved, and stimulated much interest for improved and more realistic programs of advertising and communication through all possible media."

The League's future plans include establishing a library of training tapes and informational presentations. The tapes will be in the main office and at three regional offices in the state, and shown to individual credit unions or groups of credit unions known as chapters. The League also plans to convert the central Ampex VR-7500 videotape recorder for color use. The VR-7500 is currently used to do all recording on one-inch-wide tape which can be replayed through recorders at outlying offices.

Additional plans call for more mobile videotape recording units to eventually make a variety of training and informational tapes available to all credit union employees in the state on a more frequent basis.

"The initial value of the video recording capability," Reimer said, "is that we have been able to take a realistic look at ourselves. And this is the first step toward improving relations with the people we serve." •

FINESSE IN FUN D RAISING

Each year for over a quarter century, the United Fund of Greater New York has relied on a fund-raising motion picture to be the most important key to its annual campaign efforts.

While a great variety of media are used to carry the Fund's message, United Fund officials are convinced that it is the film which is responsible for reaching New Yorkers with the greatest impact.

The Fund relies on appeals directly to the business community and on solicitation of all employees for the bulk of its income. Comparing two equal-sized companies — one in which the film is shown to all employees, and one in which the film is not shown, but only posters, brochures, etc., are used, employees of the company where the film is shown will give very much more generously — four to five times more, according to Fund records.

Knowing this, United Fund management considers the annual film to be an extremely important project. In fact, it might be said that on the success of the film in reaching the hearts and pursestrings of its audience lies the degree of success of the annual appeal.

In charge of the production of Fund films for a number of years has been Hal Golden, director of public relations for the United Fund. During this time Golden has had the opportunity to test the ingredients of each film to determine which have caused the greatest impact, and to discover which parts of past films were not up to par for one reason or another.

One of the major discoveries Golden has made is that for United Fund purposes it is better not to use "name" personalities on screen. He has found that with only 11 to 14 minutes available in which to make the entire appeal, it is necessary to "grab" the audience as quickly as possible. Yet the visual impact of a well-known actor or newscaster can last for three or four minutes into the film — the mind's eye can't easily bump him off, and his personality often remains stronger than the message of the film. And if he is used on screen at the beginning of the

Hal Golden, who has directed the production of a series of successful New York United Fund films, notes some startling facts and offers suggestions toward more successful fund raising films.

film, it must return to him for the wrap-up with at least another minute lost. And again, the personality effect would often drown out much of the preceding ten minutes of Fund message, no matter what the personality had to say.

The United Fund shifted from on-screen narrators (such well-known personalities as Ronald Reagan and Dick Powell had been used in the past) to off-screen voices five years ago. But not just any trained narrator will do for a Fund film, it must be a "deep and dark" very masculine but warm voice. Outstanding amongst recent narrators for Fund films have been Paul Newman, Ben Gazzara, Efram Zimbalist, Jr., Henry Fonda and Robert Taylor. Hal Golden believes that generally actors, rather than film narrators or newscasters, are most suitable for Fund film narrations. They are more able to project emotion to the widest cross section of the audience without the danger of seeming maudlin. It is a difficult narration to do, for a fine line must be drawn between being too emotional and seeming indifferent.

Other types of voices the Fund avoids are those which might be called "visual voices" — those which are so completely identified with faces that the personality effect might easily over-ride the message, even when made with an off-screen voice.

This year's film, *The Partners*, is narrated by Herschel Bernardi, who does a magnificent job of explaining the film's theme of people helping other people in trouble. The film, which began distribution throughout Greater New York May 1, was written by Kitty Hanson, of the New York Daily News, and was produced by Golden with the production firm of Potter, Orchard and Petrie, Inc.

The Partners, as with other Fund films, will play before a live audience — principally in stores, factories and offices —

HAL GOLDEN

of over a million people. In addition, it will play on every TV station in the city.

This year, background music was donated by the New York Philharmonic Orchestra with Leonard Bernstein conducting music from *West Side Story* at a live concert. Miss Hanson's narration was written to the beat of this music. It is very powerful — very moving.

Hal Golden has other special requisites of Fund films. He points out that with the films often playing under very bad conditions — in rooms not designed for audio-visual use, prints must be clear and never murky. Arty photography you can get away with on a big theatre screen is no good in the recreation room of a factory.

While the Fund does not believe it has a "color film" story to tell, and would really rather use b/w film, exposure on the all-color TV networks require that the film, and the TV spots, which are shot concurrently, be in color.

United Fund films have won every sort of award — enough to almost completely "paper a wall" in the Fund P.R. office. But more important, they are the vital audio-visual documents which enable the United Fund of Greater New York to successfully perform the important job of providing the opportunity for all kinds of New Yorkers to help their neighbors in need. •

Dartnell sales training films have been translated into 12 languages; are widely popular abroad.

These Sales Training Films Have Brought Inspiration to Millions

"Second Effort" featuring Vince Lombardi has become a "best seller" as Dartnell Corporation expands its library of sales training films — now translated in 12 languages.

Geraldine Brooks and Monte Wooley show salesmen how to manage their time in "Solid Gold Hours."

Sales training experts Alvin Busse (left) and Dick Borden are featured in 10 Dartnell films.

"The Selling Secrets of Ben Franklin" told in today's perspective, are just as applicable as they were for this master salesman of 200 years ago.

FOR OVER A HALF CENTURY, The Dartnell Corporation has served business and industry in the U.S. and abroad through an ever-widening range of management research services and media . . . providing tested plans and ideas to help solve problems. Founded in 1917 by J. C. Aspley, this company's roster of clients includes not only the best-known names in American and overseas business, but thousands of companies in more than two hundred industries.

Sharing the viewpoint that "print alone is not enough" for today's *complete* communications, Dartnell began carefully developing its present unexcelled library of sound motion pictures and sound slidefilms on salesmanship and motivational themes* some years ago. Familiar to countless thousands of sales managers and trainers and to millions of their men and women are such time-tested films as those featuring Richard Borden and Alvin Busse, 10 of these "Borden and Busse" subjects, each of 30 minutes duration and using both color and monochrome film, have been (and continue to be) shown throughout the Americas and abroad. Evidence of their popularity overseas is emphasized by the translation of these and other films into 12 languages, ranging from Danish, Dutch, Finnish, Flemish, French, German, Italian, Norwegian, Swedish, Portugese and Spanish to Japanese.

But the Dartnell story of success in sight/sound sales training media opened on a bright new chapter this past year with the introduction of what may easily be the factual film medium's most successful single sales motion picture! The ingredients for that success: the vivid, forceful, believable personality of professional football's most effective leader: Vincent Lombardi, formerly of the Green Bay Packers and, more recently, top man for the Washington Redskins. Add to this current 28-minute color motion picture Lombardi's philosophy of dedication and his ability to inspire men to unusual personal labor. And, finally, add the interplay of professional football action by members of the five-time world champion Packers and the "mix" for a great *Second Effort* is just about complete!

The reception to this latest Dartnell film has been phenomenal. Well over 8,500 color prints have been sold or rented — and the peak is still nowhere in sight. Like most other films in the company's library, its showings in the field are fortified and — their

images further extended — by excellent supplementary materials such as reminder cards, incentive buttons, reminder key chains, motivator cards. There's also a *Second Effort* trophy to be awarded to achievers and an Official NFL Football, autographed by the entire Green Bay team, rounding out collateral material.

That's a multi million dollar plus "gro" for what may add up to be the most successful factual motion picture of all time! Kudos for the production of this inspirational film go to Take Ten Productions, of Chicago. This comparative newcomer to business filmmaking is currently at work on what promises to be another Dartnell sight/sound success story: *The Professionals*, featuring Van Johnson and Forest Tucker.

But *Second Effort*, complete as it would be if its value rested on the leadership tale of Lombardi, is much more than that. Its story line takes an inept salesman from the bottom of the ladder "up" with Coach Lombardi as learns firsthand the philosophy and "sales" principles which transformed a place football squad into world champions.

Listen, with salesman Ron Masak, as Lombardi uses his fire and enthusiasm to build confidence:

"Unless a man believes in himself and makes a total commitment to his career and puts everything he has into it — his mind, heart and body — nothing else in life is worthwhile."

It's worth nothing that *Second Effort* prints are going to far more than sales group, churches, schools and a myriad of other uses have obtained prints.

The range of wisdom and inspiration provided by this Dartnell film library goes well beyond the titles mentioned thus far. Among six other widely-show motion pictures are titles featuring personalities such as Dr. Norman Vincent Peale, Frank Bettger, Port Henry, Dr. Joyce Brothers, and Dr. Robert N. McMurry, all well-known for their inspirational and experienced understanding of leadership qualities.

The Selling Secrets of Ben Franklin have been recounted in an effective 30-minute film created by The Jam Handy Organization for

*All Dartnell sales training films are available on outright print purchase or for executive preview rent at various rates. For complete data on the entire library of motion pictures and sound slidefilms (as well as new releases) write: Raymond A. Liozer, vice-president The Dartnell Corporation, 4660 Ravenswood Avenue Chicago, Illinois 60640. Phone: (312) 561-4000.

Dartnell; this producer also supplied top-notch story, content and film production in *The Solid Gold Hours* featuring the late Mate Wooley and Geraldine Brooks.

And Dartnell's founder, J. C. Aspley, presents *How to Sell Quality* in another very popular motion picture.

Within the Dartnell film library are two other non-training films, created as "breather" and larded with humorous treatment of Herman as this character *Holds a Sales Meeting* and shares *Herman's Secrets of Sales Success*. Both of these 10-minute titles are in color.

To round out one of the world's most complete libraries of sales and all-around human development films are three series of sound picture-films, with five titles in each. These are *Keys to Human Relations in Selling; How to Be Clear, Concise, Effective Business Letter* (presented expertly by Robert Gunning) and *Customer Contacts*, developed by Cleveland Chase.

The Dartnell story is unfinished. While records are being made in terms of print quantity and showings, these only reflect the genuinely useful role being played by this Chicago organization. Selling is the life-blood of business, at home and abroad. The infusion of inspiration, guidance and the "role-playing" review of the basic principles of the selling art as re-created by Dartnell in sight and sound, continues to play a very important role in moving both products and ideas.

Master salesman Frank Bettger (right) tells his own success story and how to apply "13 habit-formers".

Leadership talents of professional football coach Vince Lombardi are inspiration for "Second Effort" one of factual films' "best sellers" of all time.

P.O. Box 1470, Hollywood, California 90028

IFPA Programs: A Banner Year

WHAT GOES INTO the IFPA chapter program, along with "who, when, where and why"? Since the Information Film Producers of America are saturated with both old and experienced, and young and eager film-makers, it would seem a fairly simple task to assemble the year's schedule of events.

Highlight of IFPA's year is the National Convention each October, but the monthly meetings held by each chapter are what generate continuing interest and attract new members. 1969 is the banner year for the Los Angeles Chapter, reports Chairman Michael Rye, but it didn't come easy.

"When the new slate of officers assembled last summer, we took stock of the film-making talent among us, to see what our potential was in programming. It was a little startling to discover that only one, Ray Jewell, our Membership Chairman, was a practicing film producer. And at that, we couldn't put it all on Ray's back as he's producing for the Air Force. And where did he shoot this year? That's right . . . Alaska.

"The rest of us were a pretty motley crew. Pat Shorthill is a film publicist for United Air Lines, with a heavy travel schedule. We started out like IFPA's version of the Strategic Air Command: at least one of our officers was in the air at all times.

"This left Ray Engel, our Treasurer, who

is a freelance script supervisor, and myself, a narrator, to work on programs with Jack Meakin, who's a sound-and-music man. The best we had to offer was that we couldn't take the attitude of 'ahh, we already know all about that' on ANY aspect of film production."

The L.A. Chapter started up with a family affair, "The Giant Cook-Out and Love-In" staged in Griffith Park. At last, wives got to see what really kept Dad away from home the third Thursday every month. Chef-Hosts were Dean and Winnie Coffin (MPO Videotronics), Wiz and Marian Wisdom (Metric Films) and Byron Schmidt (TWA) with Gerry Oliver (TRW) as athletic hike director.

Evenview Television Systems/Memorex Corporation staged a technical session in September covering miniaturized lightweight hardware. Bob Pace, Jet Propulsion Laboratory was lucky winner of the portable Sony television set awarded by Evenview. Miss Barbara Ekholm spoke to the members on the master-apprentice program conducted by Studio Watts Workshop.

While October was pre-empted by IFPA's National Convention in Palm Springs, November offered the Eastman Kodak Super 8mm session at Cinesound Company. Fred Godfrey, Roy King and Don Adams previewed new film emulsion tests and the latest

in hardware. Rose and Austin Green host for Cinesound.

December Joseph Bluth, Vice President General Manager of Technicolor Vitro Division demonstrated videotape transfer with IFPA members taking a hand with mixers and equipment.

Following election of national officers in December, Jack Meakin organized the 1969 inaugural dinner to launch the new office and thank the old. Held at Dublin's Restaurant, and again including wives, the festivities were capped by Alan Stensvold, A.S.C. presenting films, clips and slides and "inside straight" on Bob Hope's annual t

TV screen provides sharp evidence of how train conducts herself when answering the phone. The experience of seeing herself is a valuable part of the Michigan Credit Union League training program.

to servicemen overseas. The Vietnam trip proved the ultimate in location filming.

At one time or another in his career, Meakin had composed, arranged or conducted for all the major studios. This was the year he felt the giants of Hollywood should open their doors to IFPA. When once this organization was 16mm oriented, its new name, Information Film Producers (rather than Industrial) reflects its growth in size and scope. Meakin set to work to capitalize on this fact.

Paramount Studios hosted the February meeting, with a technical session on front screen projection first used in their feature "Catch 22". Fouad Said, developer of the Cinemobile, "the studio in a truck", brought one of the rolling location units onto the Paramount stage, disassembling and assembling each component and demonstrating its production capability.

In March, Irwin Rosten and Nick Noxe, co-producers of the MGM Documentary Department headlined the program in Metropolitan Goldwyn Mayer's Studio Theatre. Examples of their documentary segments, coupled with a rapid-fire Q and A session uncovered the answers to "How does a 16mm Documentary Department co-exist with the wide-screen group?" Answer: "ver-r-r-y successfully." MGM further screened their product reel for IFPA, this being, in effect, their stockholder report, an area in which many IFPA members now have corporate responsibility within their own organizations.

April IFPA staged a three-part session

Continued on page 3

Headlining the L. A. Chapter's April meeting at Parthenon Pictures, (L. to R.) (top) Chairman Michael Rye, Charles A. "Cap" Palmer, speaker on "How to be Creative (and not get Caught)", Jack Meakin, presenting "Music and Sound Effects — Source, Application and Economy". Climbing out from under is Bob Montague, Convair Pomona, who showed his IFPA convention film, "Palm Springs Revisited".

"It's an automated projector"
"It's a filmstrip projector"
"It's a movie projector"
"IT'S A STILL PROJECTOR"

It's Super Projector!

Is there a super 8 movie projector that can be many things to many people? Well, if there wasn't one before, there is one now. It's the super new *Kodak Ektagraphic MFS-8 Projector*.

Now, on a single reel of super 8 color film, you can combine the still-frame advantages of filmstrips with the motion advantages of movies. And you show the entire program with an automatic remote-controlled, multi-speed projector. The cues on the film stop the projector automatically for still frames. There is even a cassette tape recorder available that lets you add synchronized sound to control the program. Take a typical show. A push on the remote-control start button and the projector operates just like an ordinary

motion picture projector until it senses a cue. Then it stops—for a title frame or whatever—and it holds until the start button is pushed again. Still frames may ask questions of learners, and then motion sequences may show answers. Repeats? The remote reverse control takes it back with a flick of the finger.

Use it to teach. Use it to sell. Use it to inform. Use it however you want, but use it—because this new projector represents an entirely new creative outlet for your talents. Be the first industrial cinematographer on your block to start using the super MFS-8 Projector. See your Kodak Audiovisual Dealer, or contact one of the offices listed below.

Cap Palmer on "How To Be Creative (And Not Get Caught At It)", Bob Montague (Convair) with a film recap of the Palm Springs convention, and Jack Meakin (himself) with "Music and Sound Effects — Source, Application, Economy". Cap Palmer, President of Parthenon Pictures hosted this meeting, held on the Parthenon Stage.

For May, IFPA corralled Academy Award winner Eustace Lycett, Walt Disney Studios Department Head for Special Photographic Techniques, with an in-depth presentation covering Disney's developments in special effects. Illustrations from "Mary Poppins", "Gnomobile" and "The Love Bug" complimented the session, hosted by Disney in the studio theatre.

Future plans cover a technical and hardware session by Arriflex in June, followed by the mid-summer family outing, the "IFPA Fiesta".

Some Thursday you may see a preoccupied fellow, heading toward a Hollywood stage with a fifty-foot extension cord, two coffee urns, and a general air of preoccupation. Likely it's that unsung hero, the IFPA program Chairman Jack Meakin. Follow him.

Impressive Membership Expansion

"Progress in member service," states IFPA President Mitchell Rose, "under the chairmanship of Bob Montague (Chapters Vice President and Membership — West) promises great growth in the current year."

Recently welcomed to the official IFPA family was the Boston chapter. Under consideration now for charter application is the Inland-Empire Chapter, which will cover the San Bernardino, Riverside and Redlands area of Southern California. Additionally says President Rose, we believe we may look forward to an extension of member services to Seattle, Houston and Chicago.

In addition to chapter growth, Bob Montague hopes his contest for individual membership recruitment, conducted only by western chapters, will double our membership. To members who recruit one member, VP Montague promises a handsome IFPA lapel pin and to the five members who recruit the largest number of new members, very special merchandise prizes will be awarded.

NorCal, SMPTE Host Super 8 Meet

IFPA's Northern California Chapter, in cooperation with the Society of Motion Picture and Television Engineers held its full-day Seminar, Saturday May 24, 1969 at the Japanese Trade Center — Miyako Hotel in San Francisco. Subject of the seminar was Super 8 production and projection systems.

Dr. Irwin Moon, director of Moody Institute of Science was the keynote speaker. With him were Dr. Jerrold Kemp of San Jose State College and William Wagner, creative

director at Wells Fargo Bank. Two panel discussions covered laboratory practices and production techniques. Manufacturers demonstrated a wide variety of Super 8 project equipment.

Details on "Cindy" Competition

Ira Thatcher, Chairman of the IFPA 1969 Film Competition today released official rules for the association's twelfth annual film competition, held in conjunction with IFPA conference on October 16, 17, 18, 1969 at the Sheraton Palace Hotel in San Francisco.

The competition, said Thatcher, "is open to all non-entertainment filmmakers in the United States and abroad, and films submitted, must have been released between July 1, 1968 and August 1, 1969. "Film continued Thatcher," must be 16 mm print with optical sound tracks and there is a limit to the number of entries anyone wishes to enter."

"Cindy entries," Thatcher continued, "are divided into three main groups — the institutionally produced film, the commercially produced film and films produced by city, state or federal government. Within the three major groups are 8 categories — public relations, training, employee relations, technical, sales and advertising, enrichment, academic instruction and special films."

Thatcher, a training film specialist for United Airlines, urged that entrants be aware that in addition to evaluating the creative and technical excellence, judges will place major emphasis on the achievement of the film's objectives. Therefore Thatcher cautioned, "it is important that care be taken to place each film in the proper category."

For complete contest information and official entry forms, entrants may write directly to Ira Thatcher, Chairman IFPA 1969 Film Competition, United Air Lines, San Francisco International Airport, San Francisco, California 94128. Entries must be received by August 1, 1969 and cost of single entry is \$15.00 to IFPA members and \$25.00 to non-members.

San Diego Visits Camp Pendleton

"Close proximity to military installations," says San Diego Chapter Chairman Gene Lefebvre, "serves as a great source of stimulating program material."

Recent meetings took IFPA members to the photo department at Camp Pendleton where members of the Marine Corps West Coast Motion Picture Unit discussed the work of their photographers and cameramen and how the USMC produces its films. Additionally, members enjoyed a tour of the facilities and a screening of a Marine Corps training film.

A special visit to the Naval Undersea Warfare Center

You don't hand-hold the NPR — you shoulder-rest it.

We all know what some hand-held shots look like. But a lightweight, silent camera that needs no AC power, no clapstick and no blimp can obviously go places where a tripod would slow things down or be impossible to set up.

It's not how much the camera weighs but how the weight is distributed that determines steadiness. Every camera on the market, except ours, requires the cameraman to support its weight in front of him with both arms. There's no hand free to follow focus, change the aperture or zoom. Muscle fatigue causes camera shake. And because they are too complex to

dismantle between shots, braces cause backache.

Most of the NPR's weight is over your shoulder. The feed and take-up rolls are side by side at the back of the magazine. Balance doesn't change as the film goes through. The motor nestles into your shoulder like a rifle butt, only higher. While your elbow rests against your side, you keep the camera in position with one hand. The secret is to relax your arm and let gravity do most of the work.

Many NPR users are getting steady shoulder-rested shots of still subjects at such focal lengths as 70mm. They're also getting five-

second magazine changes, registration-pin movement, precise reflex viewing, a rotating two-lens turret, a constant-speed motor with a sync-pulse generator and an automatic clapper, and, of course, blimp-free silence.

We have a brochure on the NPR that we'd like to send you. Just let us know your address. Ours is Eclair Corporation of America, 7262 Melrose Avenue, Los Angeles.

fare Center was hosted by Tom Garcia of the Technical Film Branch of NUWC. Garcia and Bob White discussed NUWC motion picture activities and IFPA members enjoyed an excursion to the docks to view underwater research craft used by NUWC scientists. One of the highlights of the evening was Bob White's informal talk on his activities with SEALAB III.

Current activities in San Diego bring an election of officers to the May meeting and a promise to VP Bob Montague, that by a

poll of its members, the San Diego IFPA Chapter expects to welcome twenty new members during the membership recruitment program conducted by IFPA chapters on the west coast.

Washington Plans Future Programs

IFPA's Washington Chapter had a stimulating May meeting when J. W. Brubaker, an organizing member of the Washington Chapter, hosted the meeting at the Applied Physics Laboratory of the Johns Hopkins University located in the new model city in Columbia, Maryland.

Key members of the Washington Chapter, at a meeting presided over by Bruce Herschensohn, director of motion pictures and television, USIA, met recently to consider chapter programming for the next six months. Requests and suggestions made by members, plus success patterns found in related activities were discussed. The decision reached

points to a series of guest experts in the film and audio-visual industry who will demonstrate methods they have used or established who, with the members, will relate problem solving techniques and how they can be successfully adapted in like or similar situations. As quickly as confirmation of invitations are established, the Chapter will release information on the total six month programming.

Disney Hosts LA May Meeting

The Los Angeles Chapter's May meeting was hosted by Walt Disney Productions at Disney Studios in Burbank. Guest speaker was Eustace Lycett head of Disney's special photographic effects department.

Lycett, an Academy Award winner for his special effects in the film *Mary Poppins*, discussed sodium screen processes and traveling matte systems by which two or more separately photographed scenes are combined into one picture.

Participation Key to Bell & Howell's Dealer Blue Chip Club

Put 10 outstanding audio-visual dealers into a room, develop an agenda that is solid in content, yet flexible in scheduling, assemble your top marketing people to meet with them, and you have the formula for an effective exchange of information and ideas.

That, essentially, is the format which Bell & Howell's Audio-Visual Products Division utilized in its first meeting of the Blue Chip Club, a newly formed organization made up of ten of the company's leading A-V dealers.

In forming the organization, Bell & Howell wanted to:

Provide special recognition for those dealers whose total performance has established them as leading dealers in the A-V industry.

Develop a vehicle for effective discussion on a variety of product, marketing and management topics.

An opportunity for the Blue Chip Club members to participate in and enact new marketing strategies and programs.

This year, sessions were held April 14, 15 and 16 in Palm Springs, Calif. Dealers selected to attend represented a cross section of the audio-visual industry not only in size, but also in market share. During those two

and a half days their attention was focused on topics of mutual interest to Bell & Howell and their own organizations. Included were discussions of franchise agreements, products, inventory, advertising and conditions, special promotions, industry sales meeting and competition.

Members of the 1969 Blue Chip Club: Robert R. Hiller, vice president, Midwest Visual Equipment Co., Chicago, Ill.; A. F. Northorn, president, A-V Communications, Inc., Farmingdale, N.Y.; Buddy Tomlinson, president, Audio-Visual Aids, Inc., San Antonio, Texas; Kenneth Cromar, a partner, Cromar's, Denver, Colo.; Robert J. Potter, sales manager — audio-visual division, Photoart Visual Service, Milwaukee, Wis.

Other members attending were: Robert Franklin, a partner, Gordon S. Cook, Inc., Ft. Lauderdale, Fla.; William G. Kirtley, president, Central School Supply, Inc., Louisville, Ky.; Robert P. Abrams, president, Williams, Brown & Earle, Philadelphia, Pa.; Charles F. Appel, Sr., president, Appel Visual Service, Inc., Pittsburgh, Pa.; and Jerome Kintner, president, Photo & Sound Co., San Francisco, Calif.

South Africa's Film Program Success Through Honesty

FOR THE PAST several years, films from the government of the Union of South Africa have established an impressive record in winning top awards at film festivals throughout the world. With one reason, because these films, through their content, technical quality and audience effect have been representing the country well wherever they are seen, which is most of the world.

To get the complete story of the South African Information Service film program, BUSINESS SCREEN interviewed the country's Ambassador to the U.S., H.L.T. Taswell, while he was in Chicago receiving a "Gold Camera" award at the U.S. Industrial Film Festival for *Radio Bantu*, a film that shows the character and enthusiasm of the people of the country through a radio program broadcast in the seven Bantu languages.

According to Ambassador Taswell, the basic objective of his government's Information Service film program is to "project the total life of the country" by presenting as broad a picture of the country as possible in each film. Although the country has been criticized for not making harder "propaganda" films, Ambassador Taswell related that the basic approach of honesty has proven far more successful; at home and abroad.

All of the films are produced and made by commercial producers in South Africa "to encourage private enterprise" though the Infor-

Scenes from some of the 12 films currently in distribution by the South African Information Service. Opening scene from "Radio Bantu" (top) features unusual camera techniques in the film on the country's cultural diversity. "Climate of Change" (below, left) deals with adjustment problems of animals in the rapidly changing modern society of South Africa. The stretchy sequence (below, right) is from "South Africa's Scientists."

Ambassador H.L.T. Taswell with Editor L.B. Gregory. (Photo by Judy Gold.)

on Service office has a handful of film projects which closely follow the final editing processes. This giving the producers almost a hand encourages better work and higher activity as reflected in the number of awards films have won.

worldwide distribution program, with exhibition in several languages by local narrators completes the program. The films are distributed through regular commercial channels in each country (Sterling Movies in the U.S.) for general audiences, plus through the South African government's 20 foreign missions.

For the Union of South Africa, the winning formula for a successful government film program appears to be an honest approach with wide audience appeal, mixed with generous portions of creative visualization and a strong international distribution program. This includes TV, commercial theaters as well as general audiences.

"Just Sign Here" — A Lesson In Credit

The first film produced from a foundation grant is a clear and direct example of the effect of well-aimed corporate concern.

The Fairchild Foundation, Cine Communicators and The Better Business Bureau of Harlem are all part of a team whose goals are to build better relations between business and the community. By visually giving the consumer a better understanding of some of the problems confronting them when buying on credit, a particularly difficult problem for residents of the Harlem Community — whose people are performing in the 14½ minute film entitled *Just Sign Here*, vital education to low-income families about intelligent buying practices is made easier.

Harlem resident pondering credit buying in "Just Sign Here," the first in a proposed series of eleven films outlining the major problems resulting from unwise buying decisions.

Training Package Now Available in Spanish

200 on *Alfred* is a complete, ready-to-use, sales training program that shows Spanish-speaking salesmen how to sell. The program is based on a series of six 15-minute color filmstrips accompanied by six records. It is written to incorporate all the basic sales knowledge and selling techniques needed to increase sales production.

The great demand for *Alfred* in English brought about the Spanish translation to fulfill the needs of the increasingly sophisticated industrial and commercial complexes of Spanish speaking countries. In addition, it is used to train salesmen selling to the 30 million Spanish speaking people in the U.S.

Produced by Close/Plenum Productions, available from 114 N. Wayne Ave., Wayne, Pa. or other Close-Plenum Production offices.

Attitudes and Performance Improve with Training

Successful Service, an International Salespower Institute sound-filmstrip training program for employees, has been released by Modern Learning Aids. The color series of three are *Meet Yourself*, *Meet Your Attitudes* and *Meet Your Future*. They teach the importance of being interested in the work you do, and show why the productive employee is sure to get ahead.

Inquiries should be directed to the Business and Professional Program Department of Modern Learning Aids in New York City.

FTD Film Features California Locations

The Subject is Flowers, a new public relations film produced for the Florists' Transworld Delivery Association, shows how flowers are grown, distributed, sold, and enjoyed by people everywhere.

300 different camera setups were required because of the multiple species and colors of flowers shown in the 27½ minute movie filmed at a number of California locations.

Prints may be obtained through Association Films, Inc. of New York.

Medicine Maker Plays Lifesaving Role Today

Man's concern for man is dramatized in Eli Lilly and Company's new movie *But More Than This* showing the lifesaving role of a medicine maker in the world today. John Gary (RCA Victor recording star) and Richard Simmons (Sergeant Preston of the Yukon) star in the 28-minute Jerry Fairbanks Production along with Lilly employees in a number of scenes that illustrate the Lilly philosophy that people are the company's most important asset.

Available through Modern Talking Picture offices throughout the United States.

An Ecuadorian family waves to a physician who has administered an emergency dose of antibiotic to the father in a scene from Eli Lilly and Company's new film, "But More Than This."

Reconciliation Problems Discussed in Unique Film

The National Council of Churches has recently released a new half-hour color film titled *Szygy*, produced by Steeg Productions of New York.

A group representing a cross-section of contemporary North American society meets to discuss the problems of reconciliation. They watch a film dealing symbolically with war, cities and people. They see themselves in the film, literally, in a play within the film. Then the film within the film ends, the people express

their reactions and then ask the chairman to tell about his feelings. As the chairman gropes for words, the film ends with the implicit understanding that the audience now has the responsibility to react, to inter-relate, speak out on how they feel.

It's a different kind of film and totally unconventional for its sponsor, in that it seeming has nothing to do with religion. Its purpose is to spark discussion — and in every audience it has played to so far, it has more than achieved that goal.

Role Junior College Plays in Today's Education

The American Association of Junior Colleges and The Sears-Roebuck Foundation produce *The Now Colleges* in an effort to create better understanding of the role of the fast-developing two-year community and junior college in education. These colleges are being established at the rate of about one per week, and now enroll about two million students.

Film crews which documented faculty, administration, and students in public and private junior colleges around the country brought back scenes of new citizens of Mexican background learning English and machine tool operation; a warm, incisive interview with a mother of five children who had "finally" gone back to school; a science classroom in which the instructor is more concerned with the ability to reason than with the ability to repeat by rote; and countless other confrontations with social and educational realities.

The 28-minute color sound motion picture is available from The Sears-Roebuck Foundation, 7435 Skokie Blvd., Skokie, Illinois 60076 on a free-loan basis.

Clothing Construction in 4 Single Concept Loops

Clothing Construction, 24 single concept super 8 filmloops, adds a new dimension to the use of filmloops in education. They are designed to be used by the teacher as an instructional device and individually by the student as an information source or reinforcement tool. Each student is able to progress at his own rate as each filmloop can be pulled and run repeatedly or held for close examination.

The Webster Division, McGraw-Hill in Manchester, Missouri has full information on this instructional film intended to free home economics teachers for a more active role.

Productivity Increased, Work Made Meaningful

A dynamic new management technology that applies behavioral science principles to the task of evaluating and changing the complex social structures found in large organizations, whether in business, industry, government or other fields, is the subject of *Organizational Development*, a filmed lecture by Sheldon Davis, vice-president and director of industrial relations for the Systems Group at TRW, Inc.

The primary aim of the new technology is to increase the productivity of groups within the organization while making the work experience more meaningful to the people involved. Davis, who is responsible for TRW's pace-setting activity in organizational development, describes in detail three techniques: "team building," in which a supervisor and the people who report to him take a concentrated look at their relationships; "inter-group building," a study of relationships among groups that work together and "organization mirror," which enables a unit to get feedback from other units that use its services. He points out that organizational development techniques go beyond such laboratory training methods as sensitivity training and that they result in written action items outlining definite plans to be implemented.

Organizational Development is the ninth film in a management development series developed by Charles K. Ferguson, head of the Department of Conferences and Program Consultation at UCLA Extension. Further information may be obtained from the Uni-

versity of California Extension Media Center, 2223 Fulton St., Berkeley, Calif. 94729.

Soybean Film Outlines Overseas Markets

Meet Mr. Soybean, a film produced for the American Soybean Association by New Holland, Sperry Rand's farm equipment division outlines the association's development program for overseas markets, particularly in Japan and the EEC.

Elwood Siegel of Telic, Inc. was executive producer for the 27-minute, SOF movie.

For more information: New Holland Division of Sperry Rand in New Holland, Pa.

Hotel and Motel Training Made Easier By Film

I Like People, parts I and II, and *The Magic Touch*, parts I and II, are four new training filmstrips made available to the hotel and motel industry through Admaster Films, Inc., New York.

Produced under the direction of the American Hotel and Motel Association, two of the color and sound filmstrips are designed specifically for training of room clerks, while the other two provide instruction and motivation for maids. Versions in both English and Spanish are available.

Eastman Kodak Distributes New Physical Fitness Film

A fast-paced film, narrated by Astronaut James Lovell and produced by the President's Council on Physical Fitness, is being made available, free of charge, for group showings as a public service of Eastman Kodak Company.

Busy Day Ahead is a 20-minute sound color film which compares the daily activities of the astronauts in training with that of a busy young businessman. It shows that while they too "fly swivel chair," attend meetings, handle correspondence, and make

business trips, they always find time in that *Busy Day Ahead* for the exercise that keeps them physically fit for the rigors of space flight.

Latest Approach in Fire Safety Training Film

Holding Hands so named for a family escape plan which, in case of fire, calls for everyone to meet at a certain location outside the house and join hands so they know when everyone is out. Excellent for children of elementary school age, this 16 minute color sound film features a fire department officer teaching fire safety.

Available from the NFPA Publications Service Department, 60 Batterymarch Street, Boston, Mass.

Zero Defects Program New For Defense Department

The Hoxley Way, A Zero Defects Program That Works, is a 27-minute motion picture, produced for the Department of Defense to assist that organization, through its DCASR representatives, in selling the Zero Defects Program to defense contractors throughout the United States.

Zero Defects is a motivational approach to the elimination of defects attributable to human error. It is a voluntary program of the Department of Defense, aimed at improving the quality and reducing the cost of producing and maintaining defense material.

General Ralph H. Spanjer, Defense Supply Agency, keynotes the film with a stirring analogy of Zero Defects on the industrial scene and on the battle fields of Vietnam.

The film is available on a free loan basis or may be purchased by contacting Media Department, c/o Hoxley Incorporated, 2751 San Juan Road, Hollister, California 95023.

Continental Shows Cake Baking As An Art

The Art of Cake Making begins with visits to foreign countries in search of ingredients such as cocoa, sugar cane and coconut, then follows them through a modern bakery to show how a variety of cakes are made. All stages of cake making including the final packaging are shown in the color motion picture available from Modern Talking Picture Service and sponsored by Continental Baking Co. *Continued on next page*

Would you want to Pyramid your sales —with salesmen who call on prospects and customers with ideas that create need and desire for your products and services?

And would you prefer salesmen—who by selling creatively—bring prestige to your company, your product and to themselves as salesmen?

If so — won't you want to show them

"CREATIVE SELLING"

... the fourteen meeting audio-visual salesmanpower development program on the attitudes and techniques of helping people buy benefits?

Complete with—Sound Color Filmstrips, Programmed Leader's Manual, Salesmen's Manuals, Workshops, Diplomas, Quizzes, Evaluation Reports, Graduation Hats and Pins.

CREATIVE SALESMEN SELL 16 TIMES MORE!

Records show that Creative Salesmen average 16 times more business than the average of ordinary salesmen. With such men, wouldn't you be taking a giant step toward solid company growth with increased profits? "Creative Selling" is designed to do this for you.

RESULTS YOU MIGHT WANT!

If your salesmen had as much knowledge of people—as they have of your product—wouldn't they be better salesmen? Wouldn't the result be that your customers and prospects would think of them as warm, friendly, responsive and interested men—and the kind they're always glad to see and do business with?

Wouldn't you want a salesmanpower development program that does this —by showing men...

... a method of selling that creates need and causes prospects to want your offering?

... a method of selling that creates trust and confidence and minimizes sales resistance?

... a method of selling that creates more closes, easier closes and minimizes lost sales?

... a method of selling that creates more new business, more repeat business and more referral business?

These are the results you might expect from showing "Creative Selling" to your men.

YOU BE THE JUDGE!

Should this advertisement indicate some of the objectives you want for your salesmen—wouldn't you wish to know all about this program—and our offer for you to see it and judge it, before you buy?

IF SO — MAIL THE COUPON BELOW!

New "Perils of Paula" Parodies Early Silents

In a humorous, fast-paced parody of early silent movies, Audio Productions recently completed a U.S. Marine Corps film that successfully warns today's service wife of the pitfalls awaiting her while her husband is overseas. The *Perils of Paula* is tailored to reach today's young marrieds.

The purpose of the film is to alert overseas-bound Marines and their wives to the civilian perils facing Mrs. Marine when she is left behind. Being usually young, inexperienced and unfamiliar with the complexities of insurance, loans, installment credit and the like, these young women are often prime targets for slick con men and fringe operators.

Audio Productions' Director Hans Mandell bridges the generation gap by getting the young audience quickly involved in the film, which begins with a scene in which the making of the very film they are watching is being planned and discussed in the Marine Corps Family Assistance Affairs Office. The writer of the film and a pretty Marine Lieutenant are shown "selling" the concept to the Colonel in command.

Action cuts to scenes from the actual film — and back to the planning scene, as the writer continues to describe what he has in mind. The audience is thus flattered to attentiveness by being "behind-the-scenes" and attracted by the cinematic novelty of the format.

In the story, the heroine (Mrs. Paula Gyrene) is beset by a series of glib-tongued salesmen, all personified by the same hateable, mustachioed, loud-suited heel, C. C. (Cold Cruel) World. The message of the film is conveyed through a series of vignettes showing the defenseless Paula being taken in a succession of shady deals. Cutting between these vignettes are shots of the husband on a far-off battlefield interspersed with sequences from the story conference.

Everything of course turns out all right at the end. Suffering Paula Gyrene is aided by the USMC Family Assistance Affairs people, C. C. World is taken into custody, and Sgt. Joe Gyrene

As the film concludes, Sgt. Joe Gyrene tends to his dangerous business without incapacitating preoccupation.

Young service wives are prime targets for slick, high pressure operators.

tends to his dangerous business without preoccupation with the *Perils of Paula*.

For its intended young audience, the film provides a good example of the use of innovative thinking in bringing moribund message material to vibrant cinematic life.

Successful "Ghost Film" Promises Understanding

What is claimed to be the first successfully filmed "ghost film" ever made has been completed by Darrell Random, Ltd., of New York.

This Psychic World was made in collaboration with the Reverend Warren Smith, reputed to be "one of the greatest mediums in the world today."

In its 40 minutes the film shows a "message service", a "precipitation service", a "trumpet seance", and a "materialization seance." On the screen can be seen what Random calls "the formulation of the substance called ectoplasm issuing from the medium's body — and being used to both lift objects and clothe those who come from the realm of spirit."

According to Random, the film took two years to make, and involved the construction of very special equipment for filming in complete dark. The handbuilt infrared lights used had to be in light-tight and utterly safe operation "for the medium's life was at stake in such shooting."

Darrell Random, who is an experienced film-maker, and member of the Directors Guild of America, says that his film made "as a petition to the Congress of the United States to promote further research into the area of ourselves. With this film the door has been opened to much work in this realm — work that can only lead to greater understanding of both body and soul."

Injections Generate New Cells, Relieve Pain

A technique in orthopedic medicine called Prolotherapy which involves the production of new cells is explained in a recent film entitled *Tissue Responses to Proliferants* produced by Victor Kayfetz Productions, Inc.

The data accumulated over several thousand patient visits has been integrated with photomicrographic findings in animal studies to explain the relief of pain which follows the injections.

Prints are available for rental or can be purchased by contacting Creativision, Inc., 295 West 4th St., New York 10014.

Movie of Olympics In Mexico Available

The United States Olympic Committee's film on the Games of the XIX Olympiad in Mexico last October is now available on free loan to sports, community and business groups and to high schools and colleges.

Action scenes from the Games are mixed with scenic spectaculars in and near Mexico City, including the brilliant night display at the pyramids of Teotihuacan when the Olympic Torch was lighted. The film also shows the Olympic Village where the athletes lived and trained and stresses the value of proper diet and exercise for trained athletes.

The 27-minute color motion picture entitled *Viva Olympic Vitality* was sponsored by the American Dairy Association, which has cooperated with the Olympic Committee on four previous films, and is available from Modern Talking Picture Service.

Background Settings Available at Low Cost

Handpainted scenic background pieces designed to provide authentic looking, visually impressive settings are available in Feller Vacuum Form Studios. They can be used individually or for building full-size film sets. Fabricated of tough heavy gauge vinyl, the panels are mounted on sturdy 1" x 3" frames and are relatively light (approximately 20 lbs. per unit). They come ready to use, requiring only propping up against

Sturdy background settings now available in low-cost, light weight panels.

table supports, and are sturdy enough to withstand repeated use. The panels are available in a wide variety of styles and finishes, handpainted to order. For more information write Feller Vacuum Form Studios, Inc., 68 West 153rd Street, New York City 451.

New Buhl Lens Doubles MFS-8 Image

An auxiliary lens system that doubles the image size of the Kodak Ektagraphic MFS-8 and Inamatic series projectors has been introduced by Buhl Optical Company. The system, easily mounted in front of the prime lens, retains the condensing sys-

tem/objective lens relationship for maximum efficiency.

Buhl has also announced a rear projection Superwide series of lenses. With this series there is no need to remove and reverse slides or use complex mirror systems. A highly reflective first surface mirror is built into the lens system. The mirror may be rotated and locked into position to project the image to the right, left, up or down.

Lenses available in this series include a 1.7", f:2.8; 2.0", f:2.8; 2.0", f:3.5; 2.5", f:3.5 and a 3.0", f:3.5.

In focal lengths longer than three inches, it is practical to build an external sealed mirror assembly onto the prime lens. The mirror unit may be rotated and locked to face in any direction, and is adjustable for precision image alignment. Units available in this series are a 3.0", f:2.5; 4.0", f:2.8 and a 5.0", f:2.8.

For more information write Buhl Optical Company, 1009 Beech Avenue, Pittsburgh, Pennsylvania 15233.

3M Offers New Two Hour Tape Cassette

The 3M Company has expanded its line of magnetic tape cassettes to include a new 120 minute model. The cassette, to be known as Scotch brand 273-C-120, is compatible with existing cassette recorders and playback units.

The two hour cassette is available in a colorful album style container. The Scotch brand C-120 cassette utilizes Dynarange tape which provides improved short wavelength (high frequency) response while offering complete compatibility with slow speed recording applications.

The cassette features an improved shim material which offers reliability while eliminating

Two hour tape cassette from 3M features a new shim material reducing frictional drag.

tape binding and jamming. The shim material effectively reduces frictional drag and has the effect of increasing recorder battery life. For additional information, write Marketing Department, Magnetic Products Division, 3M Center, St. Paul, Minnesota 55101.

Automatic Diaphragm Adds New Dimension

The Arriflex Corporation of America has announced the availability of an Angenieux Model 120 zoom lens with a fully automatic diaphragm, for use with all Arriflex 16S and 16M cameras.

The automatic system is completely self-contained in the lens itself. It includes a sensitive cadmium sulfide sensing cell, a servo-motor and amplifier, and battery supply. Input to the automatic diaphragm provides for film ratings from ASA 10 through 400 and camera rates from 5 to 50 fps. A preset button permits focusing with the diaphragm wide open. On-off switch provides for manual f-stop settings. The automatic dia-

The Angenieux Model 120 lens with automatic diaphragm will have special applications in sports, wildlife and news filming.

phragm is capable of changing from f/2.2 at one extreme to f/22 at the other within about 6 seconds.

For further information write Arriflex Corporation of America, 25-20 Brooklyn-Queens Expressway, Woodside, New York 11377.

Kalart's New Series of 16mm Sound Projectors

A line of 16mm sound motion picture projectors known as Kalart Victor Series 75MC3 has been shown by The Kalart Company, Inc. Featuring the MARC 300 high intensity light system and special power pack, these projectors will provide 4 times more light output than 16mm projectors using standard incandescent lamps. They are available in both 15-watt and 25-watt full-power (RMS) amplifiers.

This 16mm sound motion picture projector features MARC 300 high intensity light system and special power pack.

The Kalart/Victor Series 75MC3 is also being offered with a built-in special pre-amplifier and interchangeable sound head which permits projection of pre-recorded magnetically striped film. Another feature being offered is rear screen adaptation which allows for the use of a

new products review . . .

continued

short focal length 5/8" lens in combination with rear projection cabinets or a side projection mirror attachment for application in displays, exhibits, conference rooms and sales training.

Other features include "snap-out" reel arms, 2,000 ft. reel capacity, safety film trips to prevent film damage, color coded threading and rapid power rewinding. For more information, write The Kalart Company, Inc., Plainville, Connecticut 06062.

General Techniques Introduces Synchronizer

The Model MQM-1A synchronizer by General Techniques, Inc., permits the cueing and synchronization of the Eastman Kodak MFS-8 Super 8 projector for programmed instruction/motion analysis with any reel-to-reel tape recorder, permitting the addition of sound.

The Mark-Q-Matic codes and synchronizes MFS-8 Super 8 projector.

The synchronizer is a self contained unit which can be placed next to any monaural, two track or four track reel-to-reel tape recorder. Cueing or coding is simply done with the use of pencil marks which can be erased from the tape without in any way affecting the tape or the recorded program. The MQM-1A can be used with any remote controlled slide or film strip projector by the use of adapter cords.

For complete information write to Dept. MP, General Techniques, Inc., 1270 Broadway, New York 10001.

Cinema Beaulieu Unveils Versatile Super-8 Camera

Cinema Beaulieu, Inc. has introduced the Beaulieu 4008 ZM Super-8 camera. Exclusive features include a Macro system with precise power focusing up to one millimeter (or closer if

The Beaulieu 4008ZM has several unique features.

required) from the surface of the lens, a motorized zoom with infinitely variable speed settings from 2 to 12 seconds, a choice of film speeds from 2 fps to 70 fps for ultra slow motion picture effects, and the largest and most luminous reflex viewing screen (27X magnification) of any Super-8.

In addition, the Beaulieu 4008 ZM (supplied with an Angenieux f/1.9, 8mm - 64mm zoom lens) features precise automatic exposure control, a variable mirrored-shutter, and interchangeability of lenses. Further information may be obtained from Cinema Beaulieu, Inc., 14225 Ventura Boulevard, Sherman Oaks, California 91403.

Extension Arms Offer 4000 Foot Capacity

Standard 2000 ft. reel arms on the Bauer P6 Automatic 16mm Optical/Magnetic Sound Projector can now take 4000 ft. film reels. This larger film reel capacity is made possible through easily attached extension arms, introduced by Allied Impex Corporation.

With the 4000 ft. reel, projectionists can show 2 hours and 26 minutes of continuous footage at 18 fps. At 24 fps. a maximum

Sturdy extension arms minimize reel changes and provide fewer interruption during the show.

of 1 hour and 50 minutes of uninterrupted film can be projected.

For additional information contact Allied Impex Corporation, 168 Glen Cove Road, Carle Place, New York 11514.

Audio Visual Libraries Permit Attractive Filing

Jack C. Coffey Company has introduced the Luxor Mark IV Audio Visual Materials Libraries to fill the need for filing and storage facilities to blend with other furnishings. This new series is finished in walnut wood-grain, hand applied over heavy-gauge steel.

The units are modular, and "add-on" feature and lock-stacking design provide for future growth. The series has matching, individual units for filing filmstrips, slides, records, transparencies, sound filmstrips and tapes. The base is equipped with

Audio Visual Materials Library blends with other furnishings.

casters and locking storage compartment. Materials for indexing, organizing and administering the library are furnished. Also included is the booklet, "Organizing and Administering your (Filmstrip, Sound Filmstrip, Disc Record, Audio Tape, Transparency) Library". For further information write Jack C. Coffey Company, Inc., 104 Lake View Avenue, Waukegan, Illinois 60085.

Versatile Viewer/Reader Film System Introduced

A series of film viewer/readers, just introduced by Traid Corporation, offers photo instrumentation personnel a versatile system for 16, 35 and 70mm film analysis in single frame, multiple frame, cine motion, or cine flow action, with mode change available instantly. Designated the V/R 100 series, the basic model has an 18 x 24-inch screen for viewing or scanning, complete front panel controls, frame counter and optional image rotation.

It uses an optical shaft encoder to convert coordinates into automatic digital readouts for recording on magnetic tape, punch cards, typewriter, etc.

Any model in the V/R 100 series is available with variable magnification, image rotation downward projection unit, automatic frame advance of 1 to 10 shutter assembly, bi-directional frame counter, and automatic lens shift.

For further information, contact Traid Corporation, Photo Instrumentation Division, 77 Flower Street, Glendale, California 91201.

Gelatron — New Color Medium in Lighting

Berkey-ColorTran, Inc. (a division of Berkey Photo, Inc.) announces the introduction of Gelatron, a new color medium for motion picture, television, theatrical and photographic indoor and outdoor lighting applications. Gelatron is heat and fade resistant as well as moisture proof. It does not dry out and become brittle with age. It is easy to handle, tear and puncture resistant with excellent transmission and color range properties.

Gelatron is available in assorted colors and in 24" x 24 sheets or in rolls, 24" x 50' or 48" x 25'. Additional data may be obtained from Berkey-ColorTran, Inc., 1015 Chestnut Street, Burbank, California 91502.

Paillard Zoom Lens for Bolex 16mm Rex Cameras

The Vario Switar 86-OE, a zoom lens for Bolex 16mm Rex cameras featuring through-the-lens light metering with fully automatic diaphragm adjustment has been announced by Paillard Inc. The lens combined with the Bolex H-16 Rex camera accurately measures the field it covers.

Fully automatic diaphragm makes it possible to do time-lapse studies from morning until evening, regardless of weather, without anyone attending the camera, yielding perfect exposures frame after frame.

is uninfluenced by surrounding
 sea and forms a filming unit
 with completely automatic light
 measuring and diaphragm adjust-
 ment. A sudden shift from a sub-
 ject in bright sunlight to one in
 the shade can be made instantly.
 In special lighting situations,
 the 86-OE lens offers a manual
 diaphragm setting as on any other
 lens. For limited automation, the
 automatic adjustment of the dia-
 phragm can be restricted to any
 range at either end of the scale.
 The 86-OE's built in exposure
 meter is adjustable for film sen-
 sitivities from 10 to 200 ASA.
 For more information contact
 Willard, Incorporated, 1900
 Power Road, Linden, New Jersey
 07036.

Smith System Develops New Lectern-Desk

Smith Systems Manufacturing
 has developed a lectern-desk es-
 pecially useful in classrooms, lec-
 ture halls and business presenta-
 tions when an overhead projec-
 tor is used to supplement talks.
 When the built-in lectern is
 folded, the square-line desk is a
 standard 30" high. But when
 extended the 24" x 24" lectern
 section can be raised to a choice
 of four heights.
 The desks are constructed of

heavy-gauge steel and have rug-
 ged, square tubular legs. They
 are available in tan with birch
 plastic top, or in black with a
 textured walnut top. Informa-
 tion may be obtained by writing
 Smith Systems Manufacturing
 Co., 57 S.E. Emerald, Minneapo-
 lis, Minnesota 55414.

Auto Sound Filmstrip System From Kalart

A solid state low-frequency
 controller is the heart of the film-
 strip and slide projector phono-
 graph combination offered by
 The Kalart Company. Known as
 Victor-Soundview Models SAT-
 65D and SAT-65DS, these projec-
 tors utilize a 30 cycle inaudible
 signal recorded on the phono-

graph record which automatical-
 ly advances filmstrip for uninter-
 rupted, synchronized picture-
 sound presentations. The transis-
 torized low-frequency miniatur-
 ized controller responds to the
 inaudible signal from the phono-
 graph record resulting in auto-
 matic film advance. Additional
 information is available from The
 Kalart Company, Inc., Plainville,
 Connecticut 06062.

This sturdy projector stand provides
 excellent optical axis alignment
 while not restricting an operator
 from removing or changing trays.
 The aluminum structure has insu-
 lated foot pads to protect the sur-
 face on which it rests, and recessed
 foot cups for the projector which
 assure basic alignment. For further
 information, write Fortune Audio-
 Visual, 30-24 Broadway, Fair Lawn,
 New Jersey 07410.

The Victor-Soundview projector-pho-
 nograph combination consists of
 filmstrip and slide projector, turn-
 table-amplifier and 8" cover-mounted
 speaker, all fitting into a compact
 carrying case.

A man with plans for you.

One of your first steps in film making should be to contact
 "your man at Colburn," Clyde Ruppert,
 who is our Director of Producers Services.

As coordinator of the creative phases of our
 laboratory work, editing . . . narration . . . music . . . art
 and titling, Clyde will assist you in
 achieving your desired results.

Pre-planning with Colburn is
 a valuable tool for you,
 which will save time and money
 in both shooting and lab work.
 It's one of the steps
 beyond the technical,
 the chemical and the careful,
 that has built our quality
 reputation with producers
 large and small.

new products review . . .

continued

Moviola 16mm Inspection Viewer is installed before the print take-up and permits the operator to inspect quality while printing, thus eliminating a separate quality control check.

For additional information contact Metro/Kalvar Inc., 745 Post Road, Darien, Connecticut 06820.

Slide Changer Automates Pocket Projector

T. M. Visual Industries has announced a 35mm slide Stackloader accessory for the TMC Showoff, its portable (22 oz.) pocket projector for filmstrips and slides. The Stackloader, designated Model 1007S, is designed to hold up to 40 slides, either

Miniature slide and filmstrip projector has low cost semi-automatic slide changer.

cardboard or glass mounted or intermixed. Slides are simply stacked in the holder which is lightweight and simple to operate.

More information is available from T.M. Visual Industries, Inc., 25 West 45th Street, New York, New York 10036.

Educating on FM Radio Training at Fingertips

Educating, a new teaching technique has been introduced by Triangle Publications Inc.

To enable employees of all levels to acquire new skills and/or absorb new information, either individually or in groups, Educating has developed four delivery methods, each offering a unique pushbutton student response capability. Two methods include broadcast by educational or other FM radio stations; and special classroom transmitters to students with individual wireless receiver-responders.

A third mode is transmission

Educating FM receiver and student responder.

over community antenna television cable systems or closed circuit wired systems for hotels, factories and apartment buildings. The fourth and latest development includes individual audio tapes, delivered or mailed to the student and played at his own convenience on his own Educassette tape playback response unit.

For additional information, write Educating, P.O. Box 85, Radnor, Pa. 19087.

Eye-in-the-Sky Device Stabilizes Camera

The Wesscam stabilized camera mount consists basically of a gyro-stabilized platform contained in a ball-shaped housing mounted outside a moving vehicle. The platform inside the "ball" supports the camera which is operated via remote control by the cameraman riding safely inside the vehicle. The camera's reflex viewfinder is integrated with a closed circuit television system that relays a picture of the shooting area to a video mon-

Remotely-controlled Wesscam stabilized camera mount provides tripod steadiness for shooting movies and television pictures from any kind of mobile base.

itor inside the vehicle. Due to the gyrostabilization, the camera remains stationary and vibration-free. It can pan through 360 degrees or tilt to a maximum of 90 degrees.

For more information, contact Industrial Electronics Department, Canadian Westinghouse Company Limited, P. O. Box 510, Hamilton, Ontario, Canada.

Fotovend Introduces Light Weight Printer

A new contact release printer for Super-8, 8/16mm or 35mm b/w film, small and light enough to be easily carried in a regular suitcase, is capable of operating speeds as high as 300 feet per minute, according to the manufacturer, Fotovend Corporation of New York.

Despite its compact proportions, the unit features a 200-foot film capacity. Film plates (or optional tightwinds) may be removed in moments; film plates and arms store inside the printer's body for transportation. The 25" by 13" by 11" unit may then be placed in a suitcase, or in a fibre carrying case supplied by the manufacturer.

Complete specifications and details are available from Fotovend, 50 Greene Street, New York 10013.

Lowel Light Introduces New Location Equipment

The Lowell Link System is the first application of the Tinker-Toy-Erector-Set concept to professional, location equipment. A few basic, modular components

can be interlocked in countless ways to form essential lighting tools such as booms, floor-ceiling poles, stand extension, background supports, sun diffusers, "flags", microphone "f-poles", umbrella rigs, dolly booms, water weights, offset mounts, and many more. The components are available individually and in combinations.

The Lowell Link Multi Kit covers several types of equipment at one time, eliminating hundreds of pounds of conventional studio apparatus, extensive shipping charges and wasted production time.

For detailed information, write Lowell-Light Photo Engineering, 421 West 54th Street, New York, New York 10019.

The seventeen easily accessible pockets of the Cameravest allow the photographer to carry light meter, syringes, tape, filters, pencil light still film, lenses and even an 8mm camera comfortably and without hampering movement. The vest is fully lined, durable, machine-washable dacron and cotton poplin and comes in beige, blue, grey and green in small, medium and large sizes. For more information write Cameravest Company, 9000 Sunset Boulevard, Suite 1006, Los Angeles, California 90069.

The Rank Aldis overhead projector was recently introduced for worldwide marketing by T. E. Chilton (left) and A. J. Smith, joint managing director of Rank Audio Visual Limited. The company also unveiled a new line of 16mm projectors for international marketing. For additional information write Rank Audio Visual Limited, Woodger Road, Shepherd Bush, London W. 12, England.

AVA Sets 6th Annual Training Institute

A five-day course designed to give business and industrial training directors and training specialists an intensive indoctrination to the use of audio-visuals to assist in their regular training activities, will be held November 14, on the campus of Indiana University, Bloomington.

The event, the 6th Annual Audio-Visual Institute for Effective Communication, is sponsored by the National Audio-Visual Association and the Audio Visual Center of Indiana University.

Instructors from the A-V industry and the University faculty will demonstrate the effective use of the different kinds of projected materials in training; the preparation of low cost visual materials; the use of sound recordings in training; and the use of closed circuit TV and videotape. Ample time is included for "hands on training" with equipment and in the preparation of visual and audio materials.

For information write to AVA/IU Institute, 3150 Spring Street, Fairfax, Virginia 22030.

Graflex Forms New AV Systems Group

The Graflex division of The Singer Company, Rochester, New York, has formed an Audiovisual Systems group to concentrate on serving the growing demands of education, business, industry and the government for systems services in creating total audiovisual environments.

David Ubel, vice president marketing at Graflex, noted in a statement about the new services that, "As audiovisual products have become more of a staple in education, and in other fields, the demand for integrating the equipment into the design of the total physical environment has grown accordingly. For the systems company, this means contributing to the physical layout

from the ground up, working with school administrators, audiovisual specialists, architects, and contractors to create a planned environment for the use of learning aids.

Graflex now provides these services through its systems specialists who will help design, outfit and install the audiovisual environment to meet predetermined performance objectives and cost specifications. The services apply equally well to a new or existing school, college, and university auditorium or audiovisual center, and to a business conference room or military training center."

Universal-USC Plan Summer Student Program

Universal Studios and the University of Southern California's Division of Cinema will join this summer in an effort to reduce the acknowledged information gap between experienced filmmakers and young students interested in cinema.

The effort, a six-week (June 23-Aug. 1) non-credit program for academically superior high school seniors and college freshmen and sophomores, will be conducted for the most part on the Universal lot, with evening sessions at USC, where the students will live.

Two other Universal-USC programs, these at the graduate level, have been planned for the same period. One will be for non-cinema majors; the other will be designed for high school teachers involved in teaching film-study courses. Both will carry eight units of credit.

In the program for undergraduates, students will spend their mornings and afternoons five days a week at Universal City Studios, under the supervision of USC Cinema faculty.

Covering the areas of script writing, story analysis, camera and sound techniques, acting,

Filmline Licensed for Vacuumate NO-En Treatment

In a major expansion program, the Vacuumate Corporation has equipped and licensed the products and service division of Filmline Associates, Inc., 1467 Tamarind Ave., Hollywood, California, to provide the internationally popular NO-EN process for the treatment of continuous projection film.

Charles Bordwell, president of Filmline says this franchise will place, on the west coast, technical facilities specially equipped to handle the growing demand for the NO-EN process in his region.

New Guide to U.S. College Film Courses

According to a comprehensive survey by the American Film Institute, announced today by AFI Director, George Stevens, Jr., there are now 219 colleges and universities with courses in film — an 84 per cent growth over the past five years. Fifty-one of the schools offer degrees in film

— from bachelor of science to doctor of philosophy.

The study, called *The American Film Institute's Guide to College Film Courses, 1969-70*, reports that 5,300 students are preparing for a career in film production or teaching. In addition there are tens of thousands of other students taking elective film courses.

Stevens said the 42-page study was made for the person wishing to attend a school with a film program, and for the educator and film professional who wants to find out where how film is being taught, where what courses are taught, where what equipment is used, where what assistantships and scholarships are available, where degrees are offered and where there are summer courses.

It costs one dollar and is available from the American Film Institute's Washington headquarters, 1815 H Street, N.W., Washington, D.C. 20006.

Elba Systems to Purchase Canyon Films

The Directors of Elba Systems Corporation, Denver, Colorado and Canyon Films of Arizona, Inc., announced jointly that Elba Systems has agreed in principle to purchase Canyon Films for a total purchase price of up to 10,000 shares of common stock. Canyon Films, located in Phoenix, will become a wholly owned subsidiary of Elba.

Breaks Ground for New Building

As a result of the repeal of the California State Inventory Tax related to motion picture and television films, Consolidated Industries recently broke ground for a new four-story addition at Barton and Seward streets in Hollywood.

This major expansion move will give CFI 60,000 feet of new administration and service facilities in the \$3,000,000 structure, adjacent to the firm's existing facility.

The new wing will house four review theaters, offices, conference rooms, engineering offices and electronic data processing. Production operations will be expanded to occupy the entire new facility.

Construction is expected to be completed in the Spring of 1970.

Movielab to Acquire Teletronics International

Agreements have been signed with Saul Jeffee, president of Movielab and George K. Gould, president of Teletronics International, under which Movielab will

acquire Teletronics for Movielab stock.

Already approved by Teletronics shareholders, the proposal will be submitted to Movielab stockholders June 18.

The acquisition of Teletronics, a producer of videotaped commercials and entertainment presentation for television, will give Movielab greater capabilities in both motion picture film processing and videotape service.

Los Angeles Site of SMPTE Equipment Show

An experimental format for the 106th Technical Conference and Equipment Exhibit of the Society of Motion Picture and Television Engineers, has been announced by E. B. McGreal, conference vice president.

In addition to the regular conference program, a special symposium on Super 8 production techniques will be presented during the final two days of the meeting.

The conference is scheduled September 28 thru October 3 at the Century Plaza Hotel in Los Angeles.

"Before the Emergency" Named Safety Film of the Year

The National Safety Committee has named *Before the Emergency* the "Safety Film of the Year." The 27-minute film dramatizing the need to improve emergency medical facilities in American communities was produced for Employers Insurance Wausau by Geisel Studios.

Before the Emergency was one of a dozen safety films receiving prize plaques as outstanding safety films produced during 1968, following final judging recently in Chicago.

The other top award winners included:

The Color of Danger, produced by Calvin Productions for the Motorola Corporation.

The Unknown Thirty-Six Seconds, produced by Fidelity Film Productions for the U.S. Air Force.

What's It Going to Cost You, produced for Consumers Power by Portafilms.

The Long Weekend, produced for the U.S. Air Force by Roland Red Productions.

Step Lightly, produced by

Countryman-Klang for the U.S. Department of Health, Education and Welfare.

Whiplash, produced by Cahill & Associates for UCLA Institute of Transportation.

Plane Sense, produced by John Bransby Ltd. for the Federal Aviation Administration.

Safety by the Numbers, produced by Jerry Fairbanks for the FAA.

Another Man's Family, produced by Raymond W. Jewell for the U.S. Air Force.

Sniffy Escapes Poisoning, produced by Rex Fleming Productions.

Safety Belts (series of four films), produced by Sedelmaier Film Productions for the National Safety Council.

In addition, 19 other safety films receive "Awards of Merit" by the committee for special reasons of subject treatment, production excellence and/or unusual contributions to safety.

The winners will receive their awards in October during the National Safety Congress and Exposition in Chicago.

Mergers & Openings

A preliminary merger agreement has been announced between Craig Corporation and Magnasync/Moviola. The union should provide a strong new entity in a cross-section of audio-visual markets. Craig is a leading supplier of audio materials and teaching devices, and M/M is a leader in the manufacture of professional studio equipment.

Florida's Close Productions has joined forces with Plenum Publishing Corp. in New York City to form Close/Plenum Productions, Inc. The new subsidiary offers promising credentials as a producer of specialized sales training programs and packages.

Charles MacCrone Productions, formerly in Northridge, California, has joined Halex, Inc., of Hollister, California as the media department of that firm. Halex now offers research, writing and total production of films and slide programs for business, government and education.

Portable Sales Films (PSF) has been formed in New York at 200 Park Ave. to specialize in the production of sales filmstrips and motion pictures for use in portable projectors.

Television's Mr. Wizard, Don

Herbert, has organized Prism Enterprises Inc. to produce and distribute films and videotapes to the educational market.

The Rise of Super 8

For those who still think that Super 8 and its use isn't rising fast, we call attention to a recent statement from West Germany that notes the sale of Super 8 filming materials has surpassed 8mm for the first time.

The same report notes that the U.S. was West Germany's second best camera customer during 1968, buying 505,000 units. The European Economic Community (Common Market) ranked first, accounting for 1,068,000 units.

Was it Painless?

Hal Burnett, veteran lab manager for Reela Film Laboratories of Miami, learned a lesson in the expanding use of motion pictures from an unlikely instructor—his dentist.

Burnett stared up from the patient's chair as Dr. G. W. Wegman, Plantation, Fla., leaned over him. Burnett said, "He was trying hard to explain the operation. He was talking 'dentist' and twisting his hands around in the

air. I just couldn't follow him."

After several vain efforts, Dr. Wegman called his nurse and asked for "the machine." The nurse brought in a Super 8mm movie projector and a plastic cartridge encasing a continuous loop of film.

Within moments, Burnett was watching a color film depicting the type of operation he was about to undergo.

"I knew about Super 8 film going big in industry and education, but the dentist's using it was a pleasant surprise," he said. "After I saw how simple the operation really was, I just relaxed and let him go to work."

Super 8mm film, with its small size and easy to operate projectors, is opening many new doors for motion pictures.

Reela's Burnett said, "I'm going back to Dr. Wegman next week; he's going to be featuring another operation — in full color with a musical soundtrack."

A Professional Touch
